# **Future generations**

Thinking about future generations means taking on the challenge of building and strengthening today the foundations that will shape the world of the future. Although we are aware that in every society there are immediate needs and urgencies, at Empresas Copec we understand that our responsibility is not only to meet current demands, but also to project a prosperous future for the children of today and those yet to come. This implies being a good ancestor, that is, recognizing that today's actions will have an impact tomorrow and that only through a collective effort and with a long-term vision can we contribute to building a more prosperous, sustainable and fulfilling world for future generations.

## Company Presentation

Empresas Copec is an investment holding company that is engaged in two main areas of activity: natural resources, where it has clear competitive advantages, and energy, which is closely linked to the growth and productive development of countries.

In each of these areas, it seeks that the development of its business is carried out under a sustainable management model, which ensures that the business activity considers the care of the environment and the generation of social and economic value for its different stakeholders.

To this end, Empresas Copec conducts its activities with efficiency and high ethical and transparency standards, striving for the efficient and sustainable use of natural resources, promoting important investment programs and delivering an attractive level of profitability to its investors in the long term.

Specifically, it has presence in the forestry business through its subsidiary ARAUCO, the company with the largest forestry assets in South America, one of the largest forestry producers in the world and one of the main generators of non-conventional renewable energy in Chile.

In energy, Empresas Copec has investments in companies that distribute liquid fuels, lubricants, liquified gas and natural gas, as well as in the provision of energy solutions based on renewable

energies and focused on new ways of mobility. This takes place through its subsidiaries Copec, Terpel, Abastible, Duragas, Solgas, Colgas, Gasib, Sonacol and its related companies Metrogas and Aprovisionadora Global de Energía. It also has a presence in the convenience store business through its subsidiary Arcoprime.

In the food industry, it has presence through its subsidiary Igemar, which has stakes in Corpesca and Nutrisco. These companies operate in the northern and south-central regions of the country, respectively, producing fishmeal and fish oil, canned fish, frozen fish and distributing other types of food. Also, through its related companies Inversiones Caleta Vitor and Golden Omega, it has presence in the protein food, aquaculture and Omega 3 concentrates business.

It is also present in metal mining, through its subsidiary Alxar Internacional, and in the real estate sector, through Las Salinas and Remedia Green Tech.

All these operations consolidate important production platforms in Chile, Germany, Argentina, Brazil, Canada, Colombia, Ecuador, Spain, the United States, Mexico, Panama, Peru, Portugal, the Dominican Republic, South Africa and Uruguay, which allow to market a wide range of products in more than 80 countries on five continents. 07. 04. INNOVATION IN THE DNA

05 CLIMATE ACTION AND NATURAL CAPITAL MANAGMENT

06. ONE SAME SPIRIT

## Letter from the Chairman

#### Dear shareholders:

This 2024 Integrated Report allows us to give you an official acexpectations, moods and hopes. count of the past year for Empresas Copec. It was a challenging Growing more, then, becomes an obligation and a task for all year, with growing instability at the international level, as well as a persistent stagnation of economic activity at the local level, of us. Therefore, it is necessary to give relevance again to this but in which we were able to continue developing the strategic issue and to think of policies that promote entrepreneurship, plans of each of our businesses. investments. Growth should not be a restriction, but a conviction.

longation of armed conflicts in Europe and the Middle East, coupled with the electoral success of more polarized leaders and sectors, which have favored less globalized optics. Little by little, these policies have been shaping a true trade war, leading in turn to a deep reconfiguration of logistic chains and a potential reordering of the geopolitical blocks that had been the pillar of the world order in recent decades. On the economic front, post-pandemic inflation, although it has been receding, has done so with greater difficulty and more slowly than expected, so that interest rates have remained high for longer than expected, with the consequent impact on activity.

During the year 2024, Chile recorded a meager economic growth, close to the average of Latin America, one of the regions with the It is time for the State to put itself back at the service of society lowest dynamism in the world. We are concerned that, as a society, we seem to have lost the desire to grow more. Undoubtedly, growth is certainly not everything, but it is important. Without it, we are doomed to have a country with fewer opportunities, more social conflicts and, undoubtedly, greater frustration. Low growth rates impact job creation, wage levels and access to

more and better goods and services. It also has an impact on tax collection and, therefore, on the sustainable financing of policies aimed at meeting the growing social demands of the most vulnerable sectors. And, of course, it conditions future

- The global geopolitical context has been shaped by the pro- In this regard, despite its larger budget, our State has been weakening, withdrawing from its most basic tasks, such as security; deteriorating the level of essential services, such as health and education; abandoning fiscal prudence and discipline, and attempting to transfer its own responsibilities to the private sector by means of discretionary requirements in the authorization processes. We need an agile and efficient State, that provides excellent services to citizens and strong fiscal control, but which is also, and this should be a central part of its essence, a promoter of private economic activity. Public institutions seem to have forgotten that supporting and favoring the development of new projects that indeed respect the regulations, is something that benefits everyone.
  - and not otherwise, for public policies to be designed again with a vision of the future, based on technical criteria and broad agreements, thus allowing them to endure over time, despite differences that may be valid. The fragmentation of the political spectrum, the lack of a long-term view in the debate and state action have generated enormous costs to our society. It is

		01.	02.	03.	04.	05.	06.
💦 Empresas Copec	2024	BUSINESS	SUSTAINABLE INVESTMENT	GOVERNANCE	INNOVATION	CLIMATE ACTION AND NATURAL	ONE SAME
	PRESENTATION	AREAS	AND MANAGMENT STRATEGY	AND INTEGRITY	IN THE DNA	CAPITAL MANAGMENT	SPIRIT

much more difficult to face new problems, such as uncontrolled immigration or misinformation, if we do not do it all together, defining common objectives and looking forward in the same direction. For this, we need our political class to show willingness and vocation for service and leadership, but also for the country's institutional framework to establish the right systems and incentives. The reform of the political system that we have pending is urgent, in order to reestablish the impulse to the convergence of public policies and to raise our gaze, putting an end to immediacy and zero-sum logic.

It may also be time to try a simplification with a "zero base" in several matters, not refoundational, but relevant in terms of eliminating unnecessary paperwork, formalities and requirements. The so called "permitology" in Chile has reached its limit. We need to move to a system that is based more on trust and responsibility, where the benefits that private projects bring to society and people, and not only their costs, are adequately weighed. In general, private projects aim to solve some social needs, and the current system seems to forget this, as it prevents progress until even the smallest detail, no matter how insignificant, has been resolved. This is not right. We are not against demands, on the contrary, however, we ask that they be clear and stable, simple to process and supervise.

A system less discretionary, more stable and predictable, contestable, by the way, whose consequences are not eternal delays or, simply, blockage of investment. In an election year, we expect to see these issues in the public debate.

It is in this context that our companies have had to operate during 2024. Empresas Copec posted a net profit of US\$ 1.111

billion, more than three times the figure of the previous year, and an EBITDA of US\$ 3.015 billion, that is, 31% higher than in 2023. This is mainly the result of improved operating results in the forestry sector, which had a low basis for comparison, and energy, where all subsidiaries performed better. ARAUCO recorded higher volumes and lower costs, related to the operation of its Line 3 (MAPA) and an increase in pulp prices, as well as a rise in panel volumes, achieving results that are consistent with what can be called a "mid-cycle" in pulp prices. Meanwhile, Copec reported growth in the industrial margin and in the lubricants segment; Terpel was favored by an inventory revaluation effect, and Abastible posted attractive growth across all the geographies where it has presence.

In 2024 we also continued to invest, with the long-term view that has always been at the core of our way of doing business. Total investment for the year reached US\$ 2.134 billion, with more than 98% allocated to the forestry and energy sectors, confirming our focus on these two business areas, an emphasis on which our future growth will continue to be based.

This figure includes multiple initiatives, described in greater detail in the different sections of this Report. Among them, it is worth mentioning the completion of the MAPA project, which, in total, involved resources in the order of US\$ 3 billion, the largest investment in the history of Empresas Copec so far, and one of the largest projects recently executed in Chile. Its start-up was successfully completed in mid-2024 and allows for a significant increase in pulp production, at very competitive costs and even more environmentally friendly.

But as ARAUCO competes in a global and sophisticated market against corporate giants from many other latitudes, it must continue to think about the next steps in order to maintain its scale and relative importance through new and large investments. During the year, we announced the future construction of a pulp mill in Brazil, in the state of Mato Grosso do Sul, near the town of Inocência, in an area known as the "Pulp Valley", a place with multiple logistical advantages and excellent conditions for forest growth. This is the Sucuriú project, which contemplates an investment of US\$ 4.6 billion and whose construction has already begun, with the goal of being in production in 2028.

Sucuriú is nothing more and nothing less than the largest project in the history of the pulp industry in the world. A plant with a production capacity of 3.5 million tons per year, with a unique design, but based on proven equipment, which allows us to move the frontiers of scale economies and achieve the most competitive unit costs in the industry, increasing the pulp production capacity of our subsidiary by 70%.

Allow me to make a reflection here. There are not many industries in which Chile is a global leader. Well, forestry is one of them. We are redefining the dimensions of productive expansions in the industry, building the largest capacity plant in the world. We are a Chilean company that is taking on a multibillion dollar challenge to carry out a project of enormous magnitude, addressing its engineering, geographic, legal, administrative, financial, technological and human aspects, aligning our best resources to do so. We will create almost 400,000 new hectares of plantations, with all that this means in terms of environmental and climate contribution; we will establish biodiversity

protection and enhancement areas; we will employ more than

- 14,000 workers during construction and more than 6,000 on a permanent basis; and we will manage the forests so that they are
- more resilient to climate and biological threats. In short, these
   are titanic tasks, with huge benefits for the company, but also
   for its environment and the planet. If only we could see it in its
   entire magnitude and, like many other countries, be, as Chileans,
   proud of our forestry industry, recognizing the value that this
- and other natural resources can generate for our countries and their people.
- At the same time, ARAUCO is making progress in two important expansions of its panel production capacity, through a project in Zitácuaro, Mexico, which will double its capacity in that country, and another in the province of Ñuble, Chile.
- This way, ARAUCO is strengthening its global leadership, which is also reflected on the technological front, for example, with the launch of Lemu Nge, the first hyperspectral satellite to monitor changes in the planet's biodiversity, or with the investment in TreeCo, the most advanced company in genetic improvement of forest species to optimize their characteristics, based on CRISPR-Cas9 technology.
- Through all of these initiatives, ARAUCO is defining the future of the forestry sector today.
- In order to be able to do so, it is necessary to ensure that we maintain a sound financial balance sheet that provides resilience in the face of unpredictable price cycles and preserves adequate financial margins to address any opportunities that may arise, especially in those geographies and activities in which our position allows us to leverage our competitive advantages in

<b>X</b> -		01.	02.	03.	04.	05.	06.
💦 Empresas Copec	2024	BUSINESS	SUSTAINABLE INVESTMENT	GOVERNANCE	INNOVATION	CLIMATE ACTION AND NATURAL	ONE SAME
	PRESENTATION	AREAS	AND MANAGMENT STRATEGY	AND INTEGRITY	IN THE DNA	CAPITAL MANAGMENT	SPIRIT

the long term. A responsible and disciplined management must acknowledge the circumstances under which our assets may be more valuable in other hands, and encourage appropriate divestitures to create immediate value and free resources for more profitable uses.

This is the reasoning behind the agreement reached by ARAUCO to sell 85,000 hectares of plantations in the states of Paraná, Santa Catarina and São Paulo, Brazil, to Klabin, a company whose industrial facilities are located precisely in that area, so that it can achieve greater logistical efficiencies and thus add much more value to the land in this transaction. The US\$ 1.168 billion received significantly strengthens ARAUCO's balance sheet and allows to focus on the most strategic developments in Mato Grosso do Sul, in the Sucuriú project.

With this, and with the resources of up to US\$ 1.2 billion in capital committed by the parent company Empresas Copec, ARAUCO is on a solid financial position to begin this monumental project in Brazil. Financial prudence, a hallmark of our management throughout our history, is also evident here, and has been the basis for the confidence that the financial markets have placed in the Company. Thus, for example, 2024 was the year of the largest financial placements by Empresas Copec and its subsidiaries in the Chilean bond market, with almost US\$ 800 million, including green issues and some record corporate rates and spreads for the year.

As mentioned above, large-scale industrial assets require a forest formation effort to be supplied, being an increasingly relevant contribution to climate change containment, through the absorption of millions of tons of CO<sub>2</sub> in plantations. There

are few activities more aligned with the reduction of greenhouse gases than the forestry business. The greater ARAUCO's growth is, the greater its contribution in terms of climate change. A virtuous circle.

But this environmental challenge is colossal and extends far beyond our business boundaries and the management of the direct impacts of our activities. One of the most fundamental pieces to address it is energy transition, a task where we feel called upon to take on a relevant role, especially due to the prominent position of our companies, leaders in key segments of this business area. And a leader takes on its role.

The energy transition requires a deep transformation of the supply chains of the most diverse industries, and this, in turn, culminates in an imperative need for materials and minerals, which are indispensable for building the future we dream of. One of the most essential is copper. Mina Justa, an initiative that our affiliate Alxar Internacional promoted in Peru together with Breca Group, has contributed significantly, with a production of 120 thousand tons of fine copper in 2024, in concentrates and cathodes, and with tremendously competitive costs.

Mina Justa has continued to evaluate alternatives to scale up its operations. Among these is its underground project, which is moving forward in its engineering studies. If carried out, it will increase reserves by 30% and extend the useful life of the current mine, sustaining higher production levels for a longer period of time.

Many see that the lack of minerals could become a real constraint to achieve a successful energy transition. This mobilizes us to continue looking for alternatives, with a broader view in

terms of minerals, but with a special focus on copper, given its prospects and based on the successful experience we have been developing in the region of Marcona, Peru.

However, we cannot fail to point out that it is our subsidiaries in the energy sector, Abastible and Copec, that have the most direct role in this transition process. While other companies focus on the specific offer of a product, ours have adopted, for years, a broader view, adapting to changes, following new trends and taking care that the consumer experiences are the best. The customer's point of view means that the way we face this new scenario is different. They no longer ask us for fuels, but for lower energy costs. For this reason, with the support of each of their brands, being leaders in their respective countries, our subsidiaries anticipate the energy needs of their different customers, to meet them now with comprehensive and innovative solutions.

Both Abastible and Copec have been opening paths to better bility in Colombia and Panama, through Terpel, by installing and face the challenges presented by the new energy scenario. operating the first fast chargers in those countries, where it has Thus, they have been getting involved in initiatives such as solar also achieved a strong market position. energy, highlighting the acquisition in 2024 of Granja Solar, a 123 MWp energy park in the Tarapacá Region. But in recent years, In this business area, we should recall that during 2024 Terpel activities related to distributed renewable generation, static and agreed to sell its subsidiary in Ecuador and its retail distribution interchangeable batteries, optimization of energy consumption assets in Peru. This divestment is a result of the strategic interest based on artificial intelligence, electrolyzers to produce hydroof focusing on the lubricants business in those countries where gen at low cost, among many others, have also been added. In it has a leadership position and greater competitive advantagthis scenario, our subsidiaries in energy and efficiency services es, transferring these smaller-scale operations to third parties, have been particularly important, accompanying clients in their which can better value them. transition to new energies, advising them on how to implement Abastible, meanwhile, extended its operations to Europe for the the changes in an efficient, reliable and safe manner. first time, through the purchase of the liquified gas distribution

Copec's innovative vocation is also expressed through its venture capital fund Wind, based in Silicon Valley, acknowledged as the best Corporate Venture Capital in Chile, and whose participations as a strategic investor in startups with disruptive and diverse business models, open up new growth options. In addition, through its Garage, located in Santiago, Copec is experimenting with new products and business models, also with a global perspective and with the express mandate to challenge what is currently its core business. All of this, under the integrating vision of growing in mobility, new energies and convenience, while maintaining its recognized quality of service in its traditional conventional fuels business.

Copec plays a crucial role in driving electromobility. As well as being the most extensive fast-charging network in South America, Copec Voltex is the largest supplier of energy for electric buses in the world outside China, having been awarded more than 20 electroterminals for buses. Voltex is also leading electromobility in Colombia and Panama, through Terpel, by installing and operating the first fast chargers in those countries, where it has also achieved a strong market position.

<b>X</b> -		01.	02.	03.	04.	05.	06.
	2024	BUSINESS	SUSTAINABLE INVESTMENT	GOVERNANCE	INNOVATION	CLIMATE ACTION AND NATURAL	ONE SAME
	PRESENTATION	AREAS	AND MANAGMENT STRATEGY	AND INTEGRITY	IN THE DNA	CAPITAL MANAGMENT	SPIRIT

assets in Spain and Portugal from Spanish company Cepsa. Thus, Abastible now has a commercial presence in six countries, making it one of the 10 largest companies in the world in this sector, a fuel that has an important role to play in energy transition. In addition, this operation will allow Abastible to learn in markets that are more advanced in this transition, replicating best practices and opening new growth opportunities.

I would also like to refer to a very interesting initiative being developed jointly by the subsidiaries ARAUCO, Copec and Abastible, with the support of Corfo. This is a pilot plant to produce carbon-neutral fuels from the biogenic  $CO_2$  captured in the Arauco plant's process. Three of our companies are working together, each contributing its specific knowledge and capabilities in pursuit of a noble, long-term goal.

This same long-term and sustainable vision has driven the Master Plan we have developed for Las Salinas, which seeks to transform a piece of land affected by the oil industry of yesteryear into a cutting-edge, environmentally and energetically sustainable neighborhood. Instead of having opted in the past for a quick real estate deal, selling a huge and attractive piece of land, we dreamed, instead, of leaving a neighborhood of the future to the city, a unique place, with a strong emphasis on social and community spaces, and consistent with its history. It should be noted that more than 40% of the land will be destined for public use. The project will have a large urban park, together with a system of green areas and infrastructure to connect the coastline with the upper sector of Viña del Mar, with access for pedestrian transportation.

Today, we are moving forward in the process of remediating the land, together with a leading French company, so that in a few more years we will be able to start building the neighborhood that we dream of giving Viña del Mar. This is a reward for the perseverance and long-term thinking that drives us. In fact, we will go beyond this great urban space. We will put everything we have learned in this long and complex process at the service of third parties, through the recently created Remedia Green Tech, a startup specialized in contaminated land remediation. Thus, Las Salinas will be a clear example of our firm commitment to generate value for all our stakeholders, keeping sustainability at the core of our business strategy, in order to promote a triple positive impact: economic, environmental and social.

A key component to effectively mobilize our capabilities in this direction in such a dynamic environment has been the strengthening of our corporate governance structures, which are a central pillar of our integrated management model. Its purpose is to ensure efficient, timely, transparent and sustainable management in each of our areas of operation, covering all dimensions and always aligned with our values and principles. The strategic definition of each company has been led by teams of directors who, together with our executives and collaborators, are establishing guidelines and systems of decision making and supervision for our increasingly global companies. All these efforts in governance have been recognized on several occasions, including the "Voice of the Market 2024" award, granted by the Santiago Stock Exchange, together with EY and the Chilean Institute of Directors, which Empresas Copec received for the sixth consecutive year in 2024. A recognition, an incentive to continue strengthening governance.

This is just one of the many awards that our companies have for the human development, and we must not only care for it, received this year 2024, in areas as diverse as corporate reputabut also enhance it. The environmental dimension is inherent tion, sustainability, innovation, citizen branding, talent attraction, to our activities and, therefore, inseparable from our business customer satisfaction, supplier relations, equity and inclusion, decisions. ARAUCO is, by essence, a renewable and sustainand outstanding executives, among others. able company. It was the first forestry company in the world to

In addition to fulfilling our basic role of providing goods and services in a reliable manner, in harmony with our stakeholders, we have been committed, for decades, to being active agents in the social sphere, to provide solutions to the great challenges facing our society. These include the great task of promoting quality education for vulnerable young people; fostering innovation in order to improve people's quality of life; promoting diversity and inclusion, to make the most of all talents and better fulfill our role in society; and permanent and focused contributions mainly in culture, sports and social housing.

These commitments are materialized through tangible contributions we make, whether in terms of financial resources, human capital, technology, innovative capacity or management excellence, supporting pioneering institutions in their respective fields, such as the Copec-UC Foundation, the UC Anacleto Angelini Innovation Center, the Arauco Foundation, Belén Educa, Enseña Chile, Elemental, Red de Alimentos, among others. In addition, we have strived to extend these principles throughout our value chains, providing support to suppliers and counterparties, mostly SMEs.

Likewise, in environmental matters, we act with determination and a sense of urgency, setting ambitious and specific goals to move steadily toward a circular economy driven by renewable energies. We are convinced that nature is an indispensable ally

- be certified as carbon neutral and is committed to becoming a Nature Net Positive company. Its products are increasingly present in areas such as textiles, packaging and construction, replacing less environmentally friendly alternatives. In energy,
- as we have already mentioned, we are adapting quickly to changes and leading the transition to a more sustainable ma-
- trix. In mining, we produce copper, a key resource to make this
- transformation possible.
- This same spirit inspires all our companies, which develop a myriad of initiatives, impossible to list, but which explain why we have been ratified in the DJSI Chile, MSCI ESG Ratings, FTSE4Good
- and acknowledged in the S&P Sustainability Yearbook 2025.
- Being one of the most relevant business groups in the country
- implies that we must play an active role and have a voice in the face of major global problems and challenges that are within
- our scope of action as a Company. In this line, as a way to disseminate our corporate purpose, "To shape the world for future generations", in 2024 we launched a 360° communication cam-
- paign called #NoMásCortoplacismo (No More Short-Termism). Through this campaign, we are seeking to raise awareness of a cause that concerns us, that we are committed to act on and that we want others to join. Because we need to raise our gaze, leave the immediacy, which is only concerned with the effects
- of our actions in the present, and give space to think about the future project we want to build as a society. What do we have

	01.	02.	03.	04.	05.	06.
2024	BUSINESS	SUSTAINABLE INVESTMENT	GOVERNANCE	INNOVATION	CLIMATE ACTION AND NATURAL	ONE SAME
PRESENTATION	AREAS	AND MANAGMENT STRATEGY	AND INTEGRITY	IN THE DNA	CAPITAL MANAGMENT	SPIRIT

to do, starting today, to leave a better future for the generations to come? Their destiny begins to be built today, and it is precisely now when we need to set ambitious goals, dream about how we want to be in the coming decades, design projects, and be willing to make sacrifices, because nothing relevant is done without them.

Companies should be more active in communicating what we do. But also, after defining our purposes, that transcendent role we must play as an organization, telling society about our convictions and values. I believe we have taken a different, differentiating, hopefully inspiring step in this. A courageous step.

Dear shareholders, employees, customers, suppliers, directors, executives and partners, with these words we have attempted to summarize the year 2024. I acknowledge and deeply appreciate your contribution to all that we have achieved, as well as your continued support, commitment and dedication. A year of financial results that experienced a significant increase over the previous year, thanks in part to exogenous factors, but also to the resilient and adaptable structures that we have built over the years.

In these changing times of constant challenges and transformations, companies must take on a role that transcends the generation of immediate economic value and the delivery of reliable, quality goods and services at competitive prices. We are agents of change, and we are here to inspire, innovate and catalyze positive transformations with a real and significant impact on society.

We understand that our mission goes far beyond immediate financial success. We want to cultivate the talents and dreams of

those who work with us, promote harmony with the environment and contribute to its improvement, as well as strengthen our suppliers. All of this in order to actively participate, to our scale, joining forces with others to address major global challenges. A virtuous circle, without fads and with deep convictions, to accelerate change.

We believe in the power of collaboration, agreements and a job well done, always guided by our corporate values: integrity, excellence, innovation, long-term vision and placing people at the core. We aim to build a better world for future generations, step by step, but in a lasting way. This is the reason that drives us, the purpose that gives meaning to every step we take at Empresas Copec. "We need to raise our gaze, leave the immediacy, which is only concerned with the effects of our actions in the present, and give space to think about the future project we want to build as a society. What do we have to do starting today to leave a better future to the generations to come? Their destiny begins to be built today, and it is precisely now when we need to set ambitious goals, dream about how we want to be in the coming decades, design projects, and be willing to make sacrifices, because nothing relevant is done without them."

## Letter from the CEO

#### Dear shareholders:

"He who plants trees, knowing that he will never sit in their shade, has at least begun to understand the meaning of life." This inspiring phrase from a Literature Nobel Prize winner, was present in our process of defining our corporate purpose, an intense work of reflection that ended at the beginning of 2024, when we celebrated 90 years since the creation of this Company. And what better way to celebrate it than by projecting what should be the history that is beginning, defining a corporate guideline that is synthesized in the ambitious proposal: "To shape the world for future generations."

This purpose is not a symbolic statement, but the result of collective work and effort, which lasted almost a year and involved all members of our organization, from employees to directors, as well as many stakeholders that we went to listen to. We asked ourselves: Why is it important for Empresas Copec to exist? Is the world a better place if our Company is in it? What is its contribution beyond creating economic value? And we concluded that we want to continue contributing, in a tangible way, to the development of a better world to leave to the generations that will succeed us.

This is the sense we want to give to our activity, being a guide that must permeate all our decisions: the investments we make, the projects we undertake, the causes we defend, the policies we adopt, the talent we attract and foster, the relationships we

build with the environment and society, the way we lead, the products and solutions we offer, and how we communicate.

- But no purpose can be sustained without solid foundations. And that is why, also during 2024, we called for a participatory process to reflect on the values that inspire us, define us and we seek to have. What principles have sustained us in these 90 years? Which ones should guide us in the coming decades? How much do our employees know, believe in, respect and live the foundations that guide the behavior and decisions of our organization? What virtues should characterize a company that wants to leave a positive mark on society?
- This process allowed us to meet again and also to imagine the future based on shared and deeply human principles, identifying five values that we want to be always guiding our journey and be present in our decision making.
- Undoubtedly, we must start with INTEGRITY, since we must seek to be honest and consistent people, always trying to do the right thing, even when it is difficult, unpopular or goes unnoticed. We believe that being of integrity allows us to develop a better environment, in which mistakes are recognized and their consequences are corrected, while also showing coherence between what is said, what is decided and what is done. This is the only way to build trust with our stakeholders and with society as a whole.
- Of course, EXCELLENCE. Those of us who work at Empresas Copec seek to reach our maximum potential and deliver the

<b>X</b> -		01.	02.	03.	04.	05.	06.

best of ourselves in all the tasks we perform. Every job we do, big or small, is an opportunity to build something extraordinary and to leave a positive mark.

The pursuit of excellence is reflected in our vocation for leadership, in the constant improvement of products and services to deliver memorable experiences to our customers, and in the development of projects that transform industries, among others.

The value of INNOVATION. We are constantly searching for new ways to improve people's lives. At Empresas Copec we promote curiosity and courage to explore the unknown, challenge the established and transform obstacles and mistakes into possibilities for growth.

Innovation is in the DNA of Empresas Copec and its subsidiaries. Throughout our history, we have always approached diverse challenges with this emphasis, anticipating, reinventing ourselves, diversifying our activities and daring to adopt new business strategies.

Our business vision is oriented to the LONG TERM. We believe that this view is key to contribute to the solution of society's major challenges. Our decisions and actions are always guided by a vision that considers long time frames, thinking in decades, beyond immediate results, seeking that each action contributes to the wellbeing of society, today and tomorrow.

And why not, considering our forestry management model, the Company's main business area, is based on the forest cycle, which can last up to 20 years, from planting to harvesting. This same vision is present in all our strategic decisions, which privilege investments with positive and long-term impact. Companies are, in short, people doing things for other people. Therefore, PEOPLE AT THE CENTER. We want to focus on the well-being and development of people, who are at the center of our work, guiding all our decisions and actions. We seek to act with empathy and put their wellbeing, needs and development first, in order to generate a positive impact on their lives, both inside and outside the organization.

Placing people at the center is a conviction that is specifically expressed in the bonds of trust that we forge with our customers, collaborators, partners, shareholders and, in short, with all our stakeholders. We also understand that we have a responsibility to our host communities and countries, where, in addition to generating employment, growth and development, we have a powerful social role to play.

These are the values that define Empresas Copec. And although we aspire, with conviction, to embody these principles, we are also aware that the road is not free of mistakes. We are human, we can make mistakes. The important thing is to recognize them, learn and correct, with the humility of those who know that acting with purpose and being governed by values is a demanding task that is worked on every day. It is in this spirit that the Company has developed throughout its long history.

We believe that these values, in addition to contributing to the consolidation of a strong internal culture, will also distinguish us in the business community. In a world where products and services can be imitated and technologies replicated, what really differentiates a company is its identity. And at Empresas Copec we want to be recognized for our commitment to the future, for our way of doing things and for our capacity to make a real contribution to the great global challenges.

During 2024, our businesses made steady progress in this direction. We consolidated investments in renewable energies, electric mobility, environmental remediation, forest formation and cutting-edge technology. A year in which we approved the largest investment in the Company's history. A year when we established ourselves in Europe to distribute a fuel that has a key role in energy transition and to learn from the experience of countries at the forefront of this evolution. From the launch of the Lemu Nge satellite, aimed at environmental monitoring, to the international expansion in strategic sectors, each initiative has been designed to contribute to more sustainable development.

But beyond specific projects, there is something that gives cohesion to all our work: the conviction that business activity and the resulting economic growth make sense if they generate value, contribute to wellbeing, are respectful of the environment and contribute to development. We are here to build something that transcends.

And we know that this task is only possible if we remain true to our purpose and values.

To shape the world for new generations is an invitation to raise our gaze, to plan the future, to look far ahead, to act responsibly, to work for hope.

Today, more than ever, that is the way forward.

## Empresas Copec at a glance

Investment holding company that participates in two main areas of activity: natural resources and energy. The Company operates under a sustainable investment and management model, with high ethical and transparency standards, seeking the efficient and sustainable use of natural resources, promoting important investment programs and delivering an attractive level of profitability to its investors in the long term.

ARAUCO is one of the world's leading forestry companies in terms of surface area and pulp, wood and panel production capacity. The subsidiary generates renewable energy (biomass, wind) and captures carbon through its forestry assets and wood products.

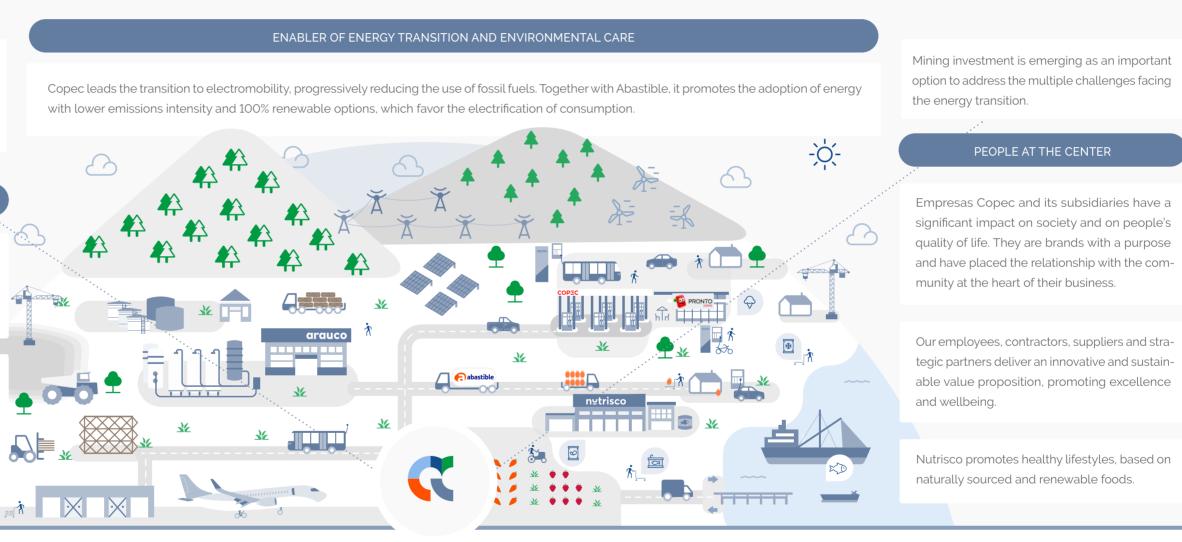

#### DEVELOPMENT ENGINE

Empresas Copec and its subsidiaries generate economic and social value, driving a development ecosystem in all the countries where it has presence, promoting innovation, entrepreneurship and job creation.

The innovative spirit of the holding company is a differentiating factor that gives it a competitive advantage in the sectors where it operates and allows to consolidate high-potential investment projects.

392,605	1,166,153

As of December 31, 2024, consolidated EBITDA reached US\$ 3.015 billion. These results were driven by improved performance in both the forestry and energy sectors. In pulp, there were higher sales volumes and lower unit costs associated with the operation of MAPA, together with an increase in prices. Copec, on the other hand, reported growth in the industrial margin and in the lubricants segment.

Net income attributable to owners of the controlling company, net of minority interests, amounted to US\$ 1.111 billion, US\$ 762 million higher than the result recorded as of December 2023. This is largely explained by an increase of US\$ 694 million in the operating income.

#### $\rightarrow$ Gross margin

Gross profit grew 18.4%, reaching US\$4.411 million. This was mainly contributed by the affiliates Copec, with US\$ 1.933 billion; ARAUCO, with US\$ 1.912 billion; Abastible, with US\$ 451 million; Igemar, with US\$ 106 million; and Sonacol, with US\$ 44 million.

#### $\rightarrow$ Operating income

In the forestry sector, ARAUCO reported an increase in its operating income, due to higher volumes in the pulp and panel businesses, and higher pulp prices. These effects were partially offset by lower panel prices.

The higher operating income in energy is explained by improvements in Copec Chile and Terpel, as a result of a favorable industrial margin in Copec, together with higher lubricant sales volumes and a positive inventory revaluation effect in Terpel. Meanwhile, Abastible reported a favorable operating income compared to the previous year, as a result of a better performance of its operations in Chile, Peru, Colombia and Ecuador.

#### $\rightarrow$ Other results

Non-operating income grew compared to the previous year as a result of higher other income from ARAUCO, due to the sale of forestry assets in Brazil, together with lower other expenses and favorable exchange rate differences.

#### **Financial position statement**

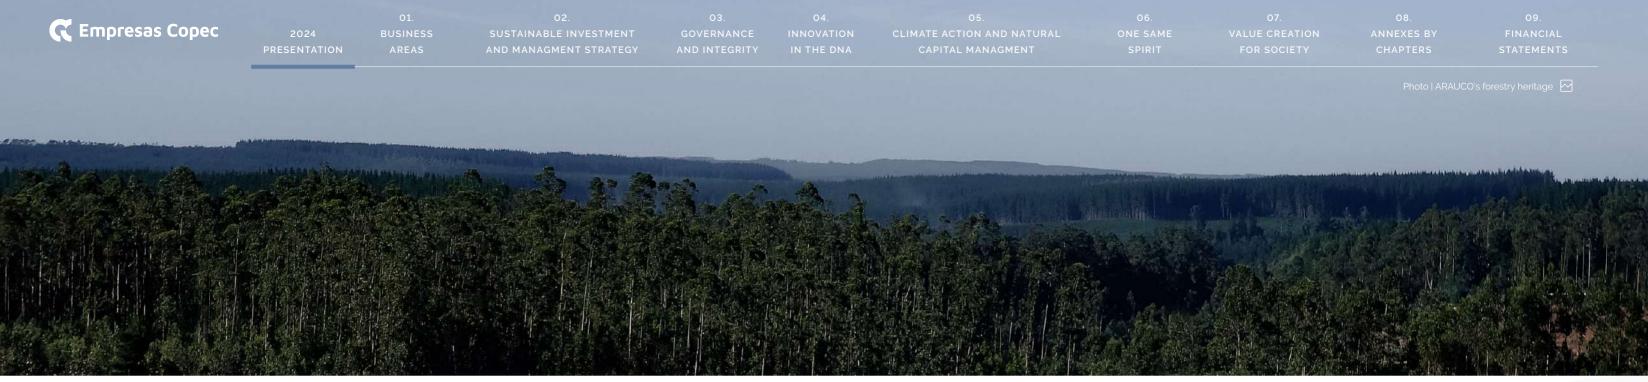

#### $\rightarrow$ Assets

Total current liabilities decreased by 15.5% compared to year-end As of December 31, 2024, consolidated current assets decreased 2023, as a result of a drop in other current financial liabilities at 4.5% compared to those existing at December 31, 2023. This ARAUCO, Copec and the Parent Company, and lower liabilities is mainly explained by the decrease in assets held for sale at of groups of assets held for sale at ARAUCO. ARAUCO, related to the materialization of the sale of forestry Non-current liabilities fell 0.3%, reflecting lower deferred tax assets, and by lower accounts receivable and inventory at Copec, liabilities at ARAUCO and Copec, offset by an increase in other partially offset by an increase in cash and cash equivalents at financial liabilities and non-current lease liabilities. ARAUCO.

Non-current assets increased 0.8% compared to year-end 2023, mainly due to a hike in property, plant and equipment at ightarrow Equity Abastible, due to the purchase of Gasib in Europe, and in right- The Company's equity increased 4.0% compared to December of-use assets and non-current biological assets at ARAUCO.

#### $\rightarrow$ Liabilities

31, 2023, primarily due to higher retained earnings.

## ☆ Forestry sector

#### $\rightarrow$ ARAUCO

December 31, 2024, which compares favorably with a loss of US\$359 million in 2023. This is explained by an improvement in operating and non-operating income of US\$ 701 million and US\$ 331 million, respectively.

Consolidated revenues as of December 31, 2024 increased 8.9%, reflecting higher pulp sales, offset by a decrease in the timber segment. Sales in the pulp business increased by 22.4%, as a result of a 17.3% growth in traded volumes and a 4.6% increase

The company recorded a net profit of US\$ 476 million as of in prices. Meanwhile, revenues from the timber business fell by 2.9%, as a result of a 7.5% decline in panel prices. Unit selling costs fell for bleached softwood (4.5%), bleached hardwood (11.4%), unbleached softwood (11.3%) and dissolving pulp (7.0%).

> Non-operating income improved as a result of higher other income from the sale of forestry assets in Brazil, lower other expenses and favorable exchange differences.

## 4 Energy sector

#### $\rightarrow$ COPEC

Copec recorded a net income of Ch\$ 323.058 billion, lower than the Ch\$487.639 billion reported at the end of 2023, which is explained by the decrease in earnings from discontinued operations (corresponding to Mapco's profit, prior to its sale), which were partly offset by a higher operating income in 2024.

Consolidated EBITDA reached Ch\$ 936.974 billion, a hike of 18.1%, due to a growth in Terpel's operating and non-operating income, partially offset by lower non-operating income at Copec Chile.

In Chile, EBITDA grew 4.3%, totaling Ch\$ 523.440 billion, mainly due to a favorable industrial margin, which overcame the negative effect of inventory revaluation.

Terpel's EBITDA in local currency increased 20.4% compared to the previous year, mainly due to a positive inventory revaluation effect and higher sales in the lubricants segment. Meanwhile, fuel volumes decreased 2.8% in consolidated terms, as a result of declines of 1.9% in Colombia, 4.5% in Ecuador, 10.0% in Panama and 3.7% in Peru, which were partially offset by the 6.2% increase in the Dominican Republic. In the natural gas vehicle (NGV) business, volumes increased by 3.4% in Colombia, while in Peru they fell by 12.5%.

Consolidated non-operating income for Copec was 4.2% higher, as a result of lower net financial costs, offset by a drop in exchange rate differences.

#### $\rightarrow$ ABASTIBLE

Abastible reported a profit of Ch\$ 51.561 billion, an increase over the Ch\$ 49.204 billion recorded the previous year. This is mainly due to a higher operating income, partially offset by a lower non-operating income. EBITDA increased 21.5% to Ch\$ 186.390 billion. Hikes were obcarried in the CBUTDA of the approximation of Chile (10.7%) Calambia

EBITDA increased 21.5% to Ch\$ 186.390 billion. Hikes were observed in the EBITDA of the operations in Chile (10.7%), Colombia (6.2%), Peru (19.5%) and Ecuador (18.9%).

#### $\rightarrow$ SONACOL

#### $\rightarrow$ METROGAS

### Food sector

## \* Other investments

#### $\rightarrow$ PESQUERA IQUIQUE-GUANAYE (IGEMAR)

Igemar recorded a loss attributable to owners of the controlling company of US\$ 38 million, which compares unfavorably with the profit of US\$ 3.3 million reported during the previous year. There was a fall in both operating and non-operating income.

During the period, there were decreases of 4.0% in the prices of fishmeal, 5.4% in fish oil, and 24.4% in canned fish, while the price of frozen products increased 2.7%.

On the other hand, 11,400 tons of fish oil, 2,093 thousand boxes of canned fish, and 24,900 tons of frozen products were sold,

representing drops of 23.0%, 31.0% and 56.0%, respectively. Total processed fisheries reached 305,000 tons, 11.2% less than during 2023.

Regarding related companies, Corpesca posted a loss of US\$ 11.8 million, which compares positively with the loss of US\$ 12.8 million reported in the same period of the previous year. Caleta Vitor recorded a loss of US\$ 4.6 million, lower than the loss of US\$ 7.8 million in 2023.

#### ightarrow Alxar international

Alxar Internacional posted a profit of US\$ 139 million, which compares negatively with the profit of US\$ 165 million reported the previous year. This is explained by a drop in sales at Mina Justa, which decreased 7.9%, reaching 120 thousand tons of copper, with 87 thousand tons of concentrate and 33 thousand tons of cathodes. At the same time, the material treated was 16.5 million tons, higher than the 15.9 million tons reported the previous year. The average cash cost for the period was 1.5 US\$/lb, which represents an increase from the 1.4 US\$/lb of the previous year.

2000

2005

4

## Incorporation of the company and expansion of the energy business

Copec was incorporated as a company to market and distribute fuels in Chile. Years later, Abastible was born, focused on the marketing and distribution of liquified gas in Chile (1956), and Sonacol, with the goal of transporting liquid fuels through a network of pipelines (1957). Finally, it will be Metrogas' turn, the result of the work with other Chilean companies (1994). At present, through these companies, Empresas Copec is developing several projects in renewable energies, electromobility and electrification.

# Business diversification

The Company expands into other industries: forestry, fishing and mining. In 1979, ARAUCO was born, currently the third largest pulp producer in the world and the third largest manufacturer of panels. From the integration of the operational assets of the fishing industry, Corpesca is created in 1999.

Decades of development of the fishing and food business will lead to the consolidation of Nutrisco in 2022, whose goal is to capitalize on new food trends and investment opportunities at sea and offshore.

#### 1989

Investmen

With the creation of Fundación Educacional ARAUCO, the Company's commitment to education was established, especially in the regions where it operates. The new century will represent a milestone for innovation in Chile with the launch of the Fundación Copec-UC, a collaboration that 15 years later will deepen with the UC Anacleto Angelini Innovation Center. Today, the Company and its subsidiaries are active members of important education and innovation networks.

Consolidation and strategic focus

A corporate restructuring gives rise to Empresas Copec, a parent company with a strategic focus on energy, forestry and fishing businesses under one same vision of the future. The new subsidiary Copec is responsible for the distribution and marketing of liquid fuels and lubricants. 2005 2010

1970

1980

## Internationalization

ARAUCO positions itself as a global player, becoming the second-largest pulp producer in the world and the third-largest manufacturer of panels. Internationalization accelerates with the acquisition of Terpel, Colombia's leading fuel distributor. This will be followed by further investments and developments in Latin America, North America and, recently, Europe. In 2024 Abastible acquires Gasib, the liquified gas business in Spain and Portugal. 2021 2024 New Com

> In 2021 Empresas Copec completes its exit from the coal mining business, while intensifying its copper operations with Mina Justa (Peru), a key metal for decarbonization. In 2023, the subsidiary Copec reveals its energy transition and business transformation strategy. For its part, the Company launches its new purpose in 2024, committing to the future and to the new generations.

## Major milestones and awards

2024

2024 milestones NCG 461 (2.2) 🕑

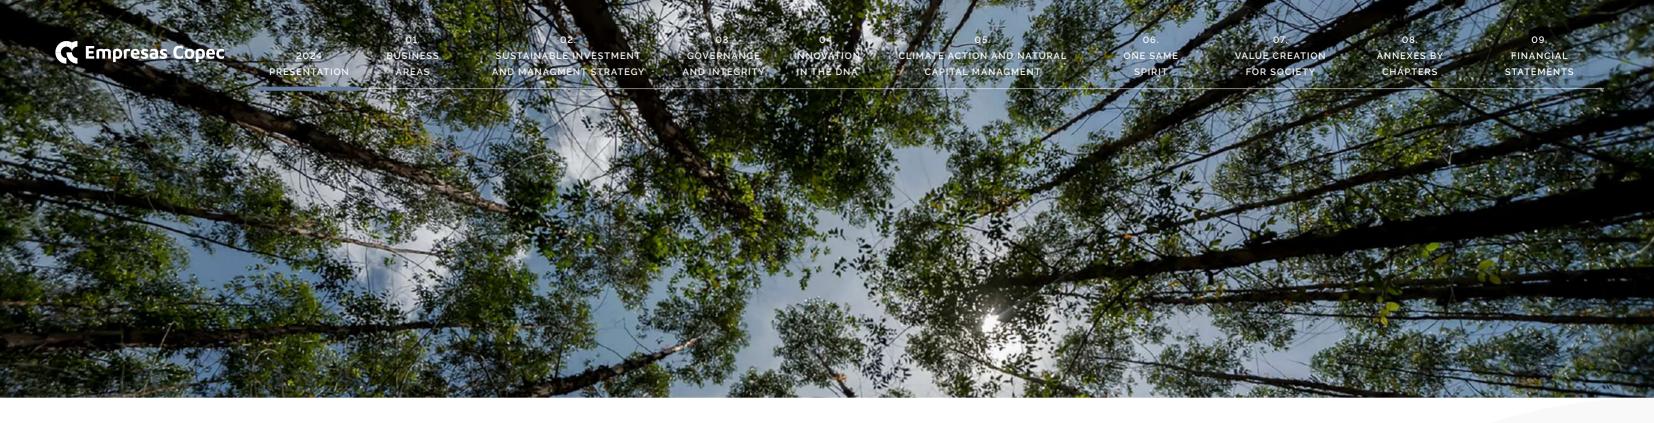

#### $\rightarrow$ Investments and sustainable financing

• During the year, the Company issued bonds for a total of UF 9,200,000 in the local market, of which UF 4,000,000 corresponds to its first green bond.

• At Investor Day 2024, Eduardo Navarro, CEO of Empresas Copec, stressed that the holding company's growth focus will continue to be on natural resources and energy, leveraging the subsidiaries' competitive advantages, cost efficiencies and leadership in the markets where they participate.

## Modernization of the forestry sector

#### $\rightarrow$ Investments and sustainable financing

- a future pulp mill located in Mato Grosso do Sul, Brazil.
- ARAUCO issued sustainable bonds totaling UF 10,000,000 in the Chilean market.
- The sale of ARAUCO's forestry plantations in Paraná, Brazil, to pulp producer Klabin, for US\$1.168 billion, was completed. This amount will help strengthen the balance sheet for the Sucuriú project.

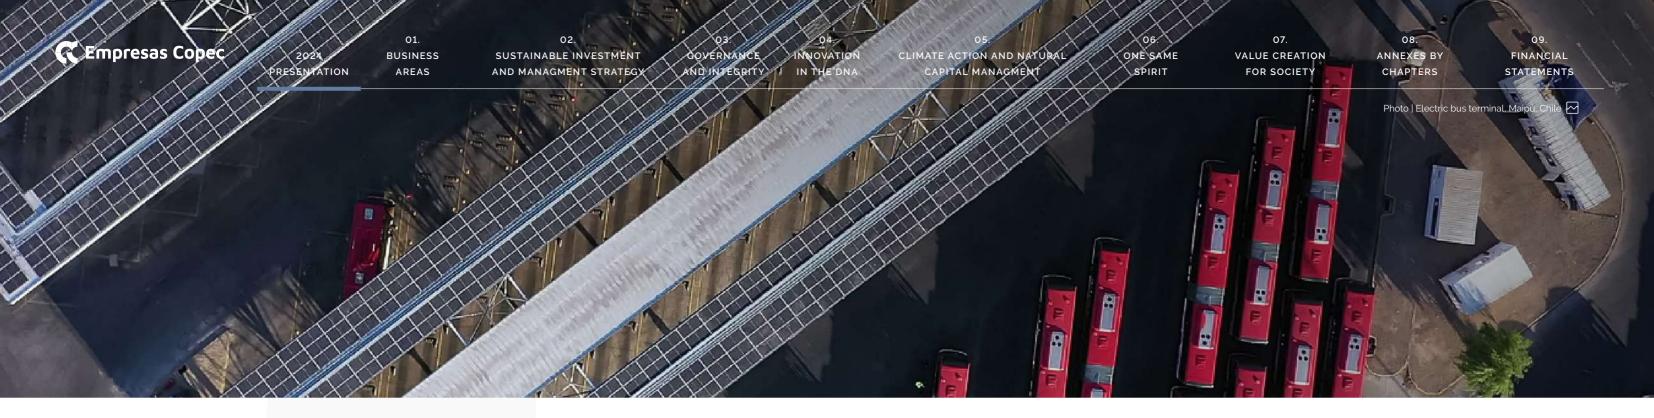

#### $\rightarrow$ New products and services

• ARAUCO's Board of Directors approved the construction of the Sucuriú project, • Lemu Nge, an ARAUCO Ventures startup, put into orbit the first private Chilean satellite, designed to observe changes in the planet's biodiversity with a hyperspectral camera.

#### $\rightarrow$ Transformation into a Nature Positive company

- Business for Nature endorsed ARAUCO's biodiversity strategy.
- ARAUCO executives participated as panelists at COP16 on Biodiversity.

## 4 Moving towards a low-carbon portfolio to accelerate the energy transition

#### $\rightarrow$ *Electromobility*

- The subsidiary Copec began to develop the first Latin American network where users can leave the discharged battery of their electric motorcycle and take a charged one with them, starting in Chile and Colombia.
- The Valparaiso Bus Terminal was inaugurated, developed and built by the subsidiary Dhemax, which is also responsible for the load management and telemetry system.
- Copec Voltex was awarded 70% of the new charging infrastructure in the last bidding process for public transportation in Santiago, which will allow the construction of 14 new electroterminals that will supply 895 electric buses. In addition, it was awarded the first electroterminal outside the Metropolitan Region, in Concepción.

#### $\rightarrow$ New energy and technology solutions

- Copec Flux reached 21 small means of distributed generation (PMGD for its acronym in Spanish) built, of which 15 are operational, injecting clean energy into the grid.
- Copec invested in Ineratec, a German startup that owns a technology that produces synthetic fuels with hydrogen and captured CO<sub>2</sub>. It also invested in Optibus, an integral platform that optimizes public transportation systems.
- Copec completed the first import of renewable diesel in Chile, obtained from natural sources such as animal fat and vegetable oils.
- AbastibleTec debuted as a new subsidiary aimed at promoting renewable energies and efficient solutions.
- Abastible signed an agreement with electricity company Comasa to develop a project to produce ammonia from green hydrogen with the ultimate goal of producing carbon-neutral fertilizers.

#### $\rightarrow$ New energy and technology solutions

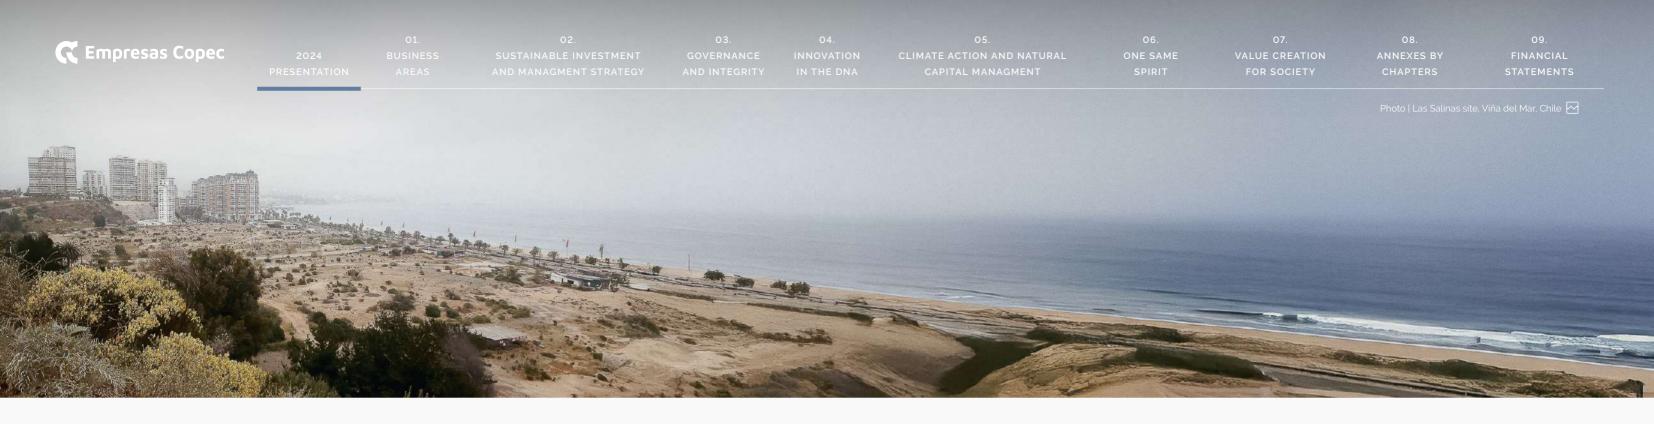

- Copec signed its first green loan for US\$ 200 million to finance new energy, electromobility and other projects associated with the energy transition.
- Abastible acquired Cepsa's liquified gas business in Spain and Portugal, thereby entering the European market for the first time.
- Colgas will build a new liquified gas storage facility in Cartagena, Colombia.

#### $\rightarrow$ Focus on energy assets

• Copec acquired Granja Solar, a photovoltaic farm in the Tarapacá Region with an installed capacity of 123 MWp.

• Terpel sold its subsidiary in Ecuador and assets in Peru for a total of US\$64 million. The divestment is due to the company's interest in focusing on the lubricants business in both countries.

 $\blacksquare$   $\checkmark$  Other investments to enhance sustainable development

#### $\rightarrow$ New lines of business in the food sector

- Nutrisco acquired 80% of LiveMore SuperFoods, a California-based company
   The Sbarro pizza chain is present in Chile in three Pronto Copec that specializes in fruit smoothies.
- Nutrisco opened a sales office in Miami, USA, and another in Vigo, Spain, to strengthen its presence in North America, Europe and Asia.
- Orizon inaugurated its most recent production facility in Coronel, which also houses the new food innovation center for entrepreneurs in southern Chile.

#### $\rightarrow$ Expansion and diversification of the convenience business

- stores: Príncipe de Gales, Lampa and Mostazal Poniente.
- Copec acquired 100% of the Chilean chain Streat Burger, with which it enters the fast casual fast food segment.
- The new physical card of the Copec Pay digital payment account made its debut in the market, adding more functionalities.

#### $\rightarrow$ Other investments

- in e-commerce.

## Social value generation

#### $\rightarrow$ Support for SMEs

- Abastible, together with BCI, Entel and Seguros Sura, created Corporación Grande Pyme, a nonprofit organization aimed at promoting the development of SMEs
- Abastible began working with the Construyendo Mis Sueños corporation on a project that seeks to provide support and advice to SME suppliers or customers.

• Blue Express sealed a venture capital investment in Reversso, a Chilean entrepreneurship dedicated to automating returns and product exchanges

• Las Salinas created the subsidiary Remedia Green Tech, focused on the remediation of contaminated soils.

## 2024 awards

# Leadership

At Empresas Copec we understand that being leaders is not only defined by being the first, but also by the positive impact we promote in people and the environment; by the creation of social value; by being governed under ethical principles and values, and by inspiring and moving others. Being a leader entails the great responsibility of being an example, being consistent, sharing convictions, thinking in the long term and being an engine of positive change. It is about leading the way towards sustainable development and being a reference in transformation, promoting innovative solutions that address the challenges of the present and the future. Good leadership opens doors, connects ideas and unites people around a common purpose. It involves courage to face challenges, empathy to understand the needs of others, and the conviction to make a significant and lasting impact for the benefit of society as a whole.

### Forestry sector value chain GRI (2-6) 🛇

#### Responsible forest management

The management of forests and plantations is carried out under a certified forestry management scheme that prioritizes soil care, conservation and improvement of biodiversity, ecosystem balance and water protection. Ninety-one percent of ARAUCO's assets are certified under responsible forestry management standards. Twenty-nine percent of the Company's assets are native forest and protected areas.

X

#### Sustainable production

ARAUCO recognizes that environmental management in industrial processes is key, focusing its efforts on monitoring, continuous improvement and compliance with regulations, especially in the areas of odors, liquid and solid waste, and atmospheric emissions. ARAUCO's forestry operations and activities adhere to certification systems that comply with international sustainability, quality and safety standards and regulations, such as ISO 14001, ISO 9001 and/or ISO 45001.

#### Reduction of CO<sub>2</sub> emissions

ARAUCO was the first forestry company to be certified as carbon neutral. Trees absorb carbon and wood products store it in infrastructure for long periods. The company develops a wide range of products and sustainable alternatives from a renewable resource such as wood, with positive impacts on the paper, apparel, construction and packaging industries.

#### Innovation and biotechnology

X

V

Through Bioforest, several initiatives and scientific projects are developed, seeking to increase and improve knowledge about ecosystems, which are applied in biotechnology and pulp laboratories, greenhouses, forestry assets and industrial plants.

#### Hydrological and erosion benefits

Forests and plantations are not irrigated and play a crucial role in influencing the quantity and quality of available water and regulating its surface and groundwater flows. They also help to reduce erosion, favoring runoff and infiltration into groundwater.

#### Bioenergy and carbon credits

ARAUCO was the first Chilean forestry company to issue carbon credits thanks to its biomass cogeneration plants, which allow it to be self-sufficient and produce a surplus of 436 MWh for the electricity system. In 2024, 87% of the energy supplied by ARAUCO came from renewable energy.

🛇 Indicator verified by Deloitte. For more information see section "External verification" in chapter 8.

08. ANNEXES BY CHAPTERS

#### Product traceability

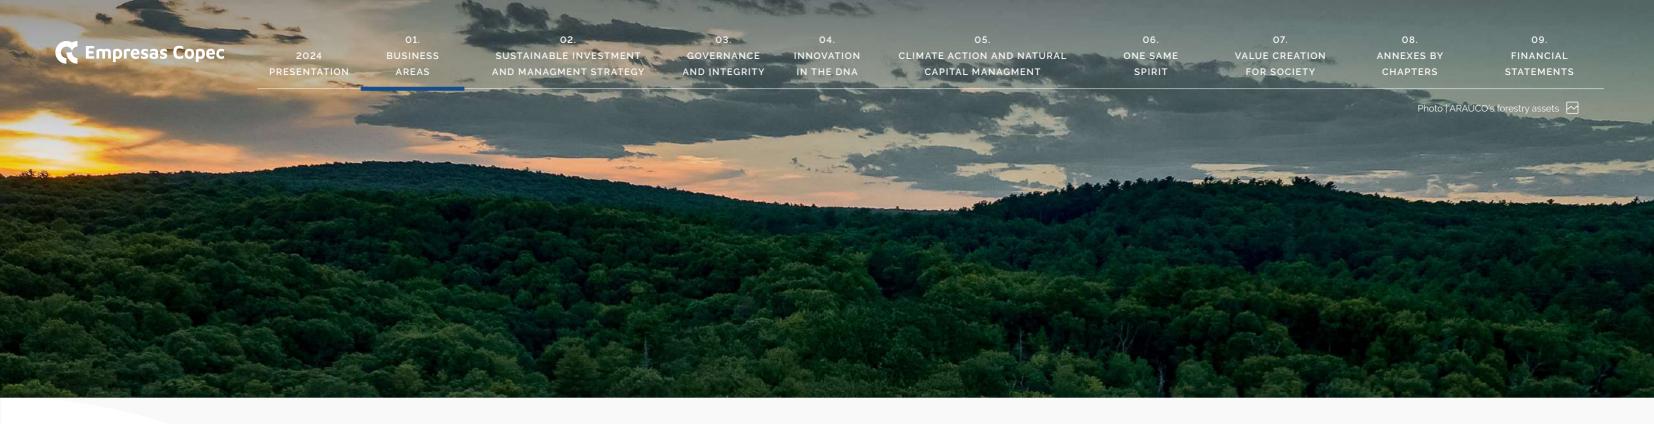

ARAUCO knows the origin of all the wood and pulp it uses, thanks to the implementation of traceability systems. ARAUCO's products come only from established plantations. The wood is converted into paper and cardboard, sawn timber, panels and engineering products, which are 100% made from renewable raw materials.

#### **Community impact**

ARAUCO delivers social value through the prioritization of ecosystem services, dialogue, participation and socio-economic development that generates opportunities in the communities neighboring its operations.

## **ARAUCO** and subsidiaries

ARAUCO is one of the world's leading forestry companies, both in area and yield of its plantations, as well as its pulp, timber and panel production capacity. It has a presence on five continents, in the forestry, pulp, timber, panel, and clean and renewable energy sectors, reaching almost 4,000 customers around the world. Its products are part of a value chain for the paper, apparel, construction, packaging, furniture and energy industries. These are marketed to points of sale through

Its products are part of a value chain for the paper, apparel, construction, packaging, furniture and energy industries. These are marketed to points of sale through representatives, agents and sales offices in 28 countries. The logistics and supply chain to distribution centers and points of sale is managed through 193 ports.

#### Supply, storage, distribution and marketing of fuels

 $\rightarrow$  Copec's products, such as gasoline, diesel and domestic kerosene, are stored in plants and distributed by tank trucks to gas stations and industrial customers. Lubricants are sent to distribution centers for subsequent transport in trucks, and aviation fuel is shipped through pipelines.

 $\rightarrow$  Abastible stores liquified gas in high-capacity tanks and transports it primarily to the bottling plants by trucks and pipelines.

V

#### Extensive physical network and digital channel

 $\rightarrow$  Copec has expanded the offerings in its network of convenience stores and has implemented digital solutions for customers and companies in Chile and, through Terpel, in Colombia, Ecuador, Panama, Peru and the Dominican Republic.

 $\rightarrow$  Abastible has an extensive liquified gas distribution and marketing network in Chile. It also markets it in Colombia, Peru, Ecuador, Spain and Portugal through its subsidiaries Colgas, Solgas, Duragas and Gasib, respectively.

#### Innovation and emerging developments

 $\infty$ 

À

Copec has Wind Garage and Wind Ventures, a space and investment fund to generate, incubate and scale new ideas and projects in the areas of mobility, energy and artificial intelligence, speeding their implementation in Latin America.

AbastibleTec seeks to be a leading player in the energy transition, mobilizing different industries by offering clean solutions with added value.

Community impact

tunities and improvement of the quality of life.

Extended team

Composed of workers, dealers, attendants, carriers, drivers, distributors, contractors and suppliers, it is the main support for the business, since they are partners and strategic allies to deliver a value offer to customers, promoting excellence and quality of service.

🖓 Indicator verified by Deloitte. For more information see section "External verification" in chapter 8.

08. ANNEXES BY CHAPTERS

#### Energy intelligence solutions

 $\rightarrow$  Copec offers several energy solutions to residential, real estate and business customers, including electric chargers, photovoltaic panels, smart batteries, storage software and energy injection, among others.

 $\rightarrow$  Abastible and its subsidiaries provide comprehensive consulting services that optimize its customers' production processes by offering solutions that reduce energy costs and pollutant emissions, as well as lower maintenance costs and increase process productivity.

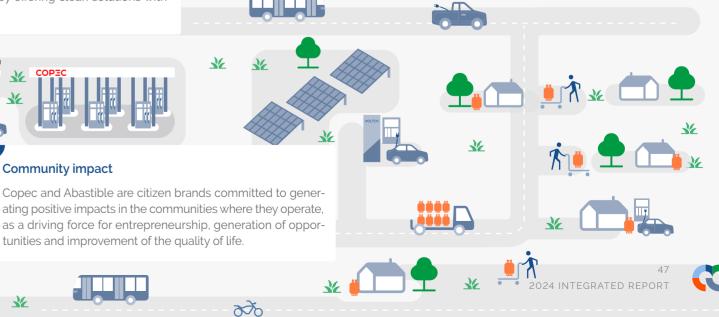

#### Benefits of energy intelligence for customers

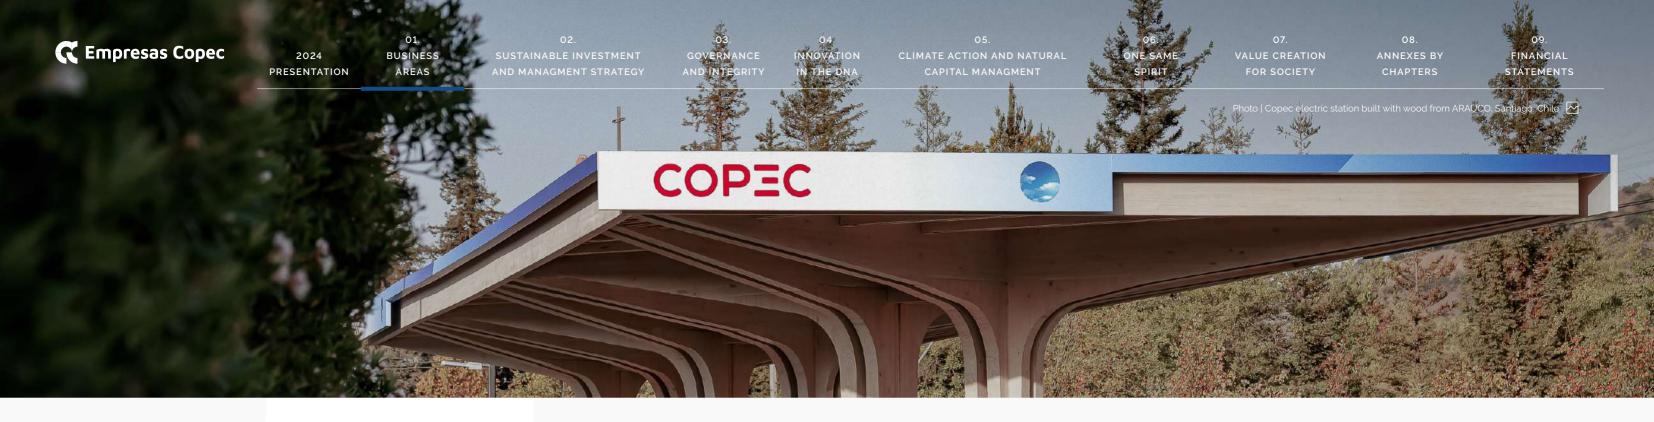

-> Decarbonization: adoption of renewable energies.

 $\rightarrow$  **Decentralization**: transformation of the consumer into a prosumer, capable of producing his own energy.

→ Digitalization: use of technologies such as AI and big data for a better use of natural and technological resources.

Copec and subsidiaries

With 90 years of history, Copec develops and delivers products, services, solutions and experiences that meet the needs of life on the move. It markets and distributes fuels and lubricants through its network of service stations. It also sells products in convenience stores and digital channels, provides electric charging services and markets renewable energies. The company is present in Chile through Copec and, with its subsidiary Terpel, in Colombia, Panama, Ecuador, the Dominican Republic and Peru.

#### COPEC'S CONSOLIDATED REVENUES

MILLION DOLLARS

#### $\rightarrow$ Copec

The company sells and distributes fuels and lubricants from Arica to Puerto Williams through the most extensive network of gas stations in Chile. It also has the exclusive distribution of the Mobil brand on the Pacific coast of South America and has consolidated its position as the main supplier of fuels and lubricants to the Chilean mining industry.

#### **RELEVANT FIGURES**

- 10.9 million m<sup>3</sup> in physical fuel sales in Chile in 2024, 1.1% less than the previous year
- 58.8% market share in physical fuel sales
- 6.5 million m<sup>3</sup> in sales through the dealer channel in 2024, 3.1% more than the previous year
- 4.4 million m<sup>3</sup> in sales through the industrial channel in 2024, 6.7% less than the previous year
- 101.4 million m<sup>3</sup> in sales in the lubricants market during 2024, 2.8% less than the previous year
- 45.6% share in the lubricant market

#### $\rightarrow$ Terpel

Terpel markets and distributes liquid fuels and lubricants in Colombia, Peru, Panama, Ecuador and the Dominican Republic, and natural gas for vehicles in the first two countries. In Colombia, Panama, Peru and the Dominican Republic, it is a major player in the operation and marketing of aviation fuel. Its purpose is to promote and mobilize people, the company and the country.

- 11.3 million m<sup>3</sup> of liquid fuels in sales through service stations and industrial customers in 2024, 2.8% less than the previous year
- 223 thousand m<sup>3</sup> in natural gas for vehicle sales in 2024, 0.3% less than the previous year
- 26.7 million barrels in lubricant sales in 2024, 3.3% more than the previous year

#### $\rightarrow$ Arcoprime

Through Copec Voltex, Copec Flux, Copec Emoac, Copec Renovables, Ampere Energy and Dhemax, the company offers several energy solutions to residential, commercial and industrial customers. These include smart batteries, electric chargers, photovoltaic panels, energy storage and injection software, among others.

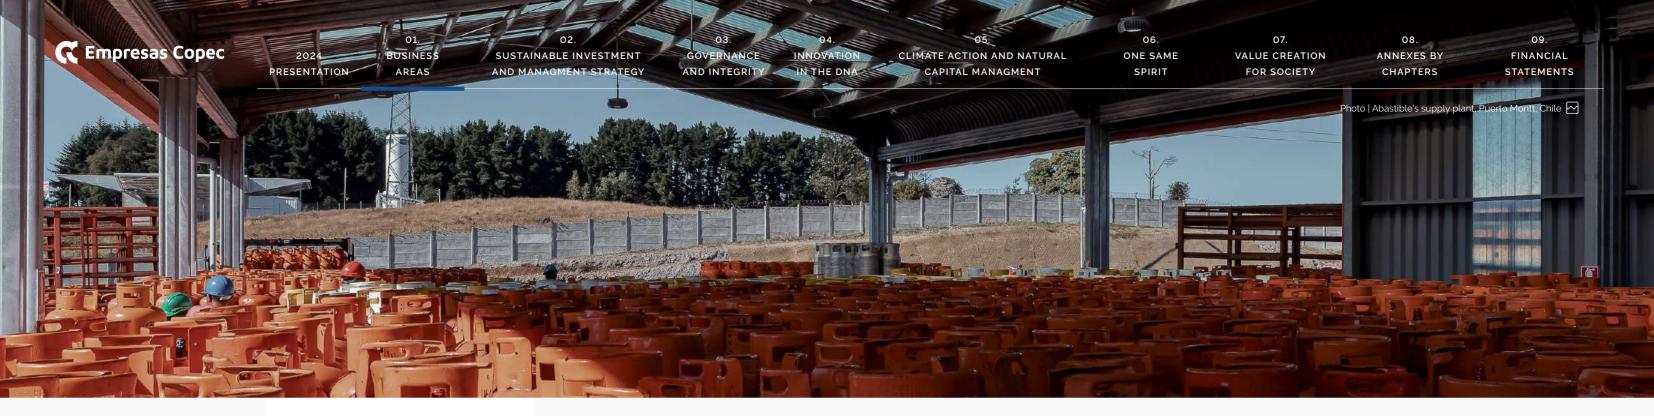

In addition, the company builds photovoltaic plants PMGD<sup>(6)</sup>, in line with its commitment to the energy transition. In this regard, in 2024 it purchased a large-scale solar generation park, "La Granja", located in the municipality of Pozo Almonte, Tarapacá Region, with an area of 322 hectares and 336,000 panels.

Likewise, it offers a series of mobility and convenience services and solutions, both in the city and on the road, through convenience stores outside service stations and product and service home delivery. Blue Express Copec also offers last-mile logistics solutions and, through Copec Pay, the company has its own digital wallet.

With presence from Arica to Punta Arenas, Arcoprime is the largest convenience store in Chile with its Pronto and Punto Copec brands. Its value proposition is based on offering an agile and differentiating experience, with quality products and services designed to sustainably address the needs of consumers. Through its subsidiary Arco Alimentos, it produces and distributes high-quality packaged food in the bakery and grab and go categories.

#### $\rightarrow$ New solutions and energies

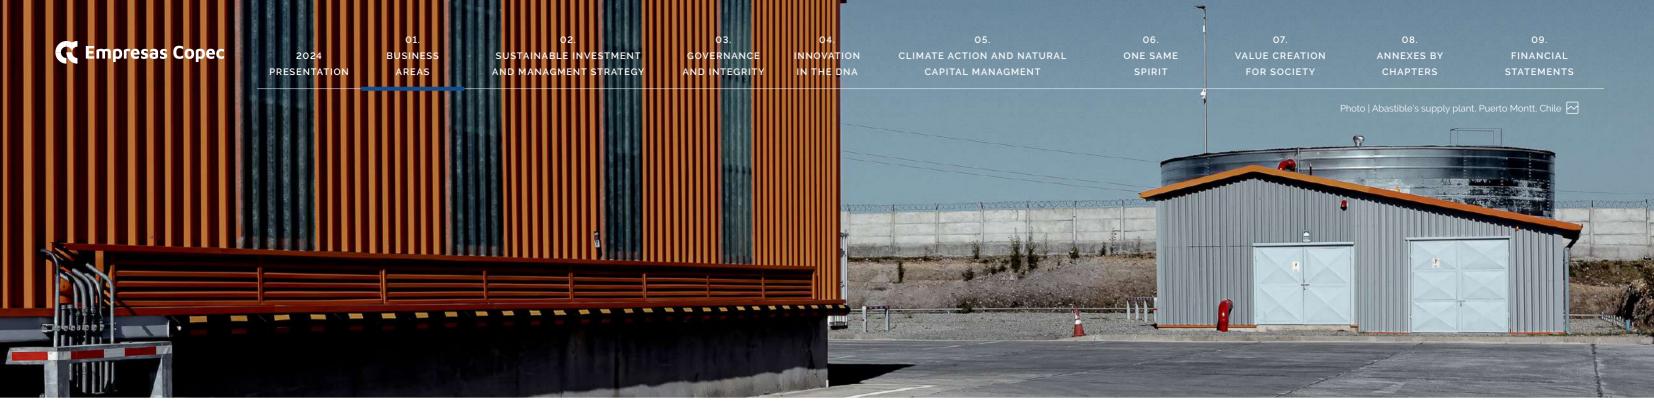

Abastible and subsidiaries

In Chile, Abastible leads in the commercialization of liquified gas for domestic, commercial and industrial use. It also offers comprehensive energy solutions with state-of-the-art technology for the most diverse industries, thus promoting energy efficiency and environmental protection. It also markets liquified gas in Colombia, Peru, Ecuador, Spain and Portugal through its subsidiaries Colgas, Solgas, Duragas and Gasib, respectively. Through the new subsidiary AbastibleTec, it provides cutting-edge solutions for the energy transition.

#### ABASTIBLE'S CONSOLIDATED REVENUES MILLION DOLLARS

#### $\rightarrow$ AbastibleTec

It seeks to be a leading player in the energy transition, mobilizing the different industries towards a sustainable future, by offering clean solutions with added value that reduce polluting emissions and energy and maintenance costs while increasing process productivity.

To date, close to 250 energy solutions projects have been implemented, including the replacement of thermal equipment and the implementation of renewable energies, electric mobility, among other solutions focused on industries that are relevant to the country, such as salmon farming and mining.

#### $\rightarrow$ Gasib

In 2024, Abastible agreed to purchase Compañia Española de Petróleos' (Cepsa) liquified gas business

in Spain and Portugal, Gasib, for approximately €275 million through a share purchase agreement. Abastible will continue to use the Cepsa brand in the commercialization of products and services in the Iberian Peninsula, in addition to having a long-term liquified gas supply contract with the company.

Gasib Spain is the main player in the unregulated bottled liquified gas business in that country, and Gasib Portugal is the fifth largest company in the business, in terms of market share, in that country.

#### $\rightarrow$ Abastible Chile

Through the largest network of distributors nationwide and a solid presence in the territory, Abastible satisfies several liquified gas needs in homes, industries and businesses. It also offers home services and value-added energy solutions, using environmentally friendly technology in domestic and industrial processes.

#### $\rightarrow$ Colgas

The company markets liquified gas for residential and industrial use in Colombia. It also participates in the development of energy solutions, manufactures and markets cylinders and storage tanks through the company Cinsa, and transports bottled and bulk liquified gas in trucks through the company Cotranscol.

#### $\rightarrow$ Duragas

It markets liquified gas for residential, industrial and vehicle use in Ecuador, covering 18 of the country's 24 provinces.

#### $\rightarrow$ Solgas

It markets liquified gas for residential, industrial and automotive use in Peru, and is one of the largest distributors in that country.

#### Innovative, sustainable and affordable food production

 $\rightarrow$  Nutrisco seeks to generate a positive impact on people's quality of life, innovating in the way food is made and developing better, accessible and quality products. With a firm commitment to sustainability, it promotes responsible practices that favor the wellbeing of both people and the planet.

#### Sustainable supply

04.

 $\rightarrow$  The company works to develop a sustainable supply chain that minimizes environmental impacts, promotes ethical practices, and supports the development of supplier communities. By working collaboratively with artisanal fishermen and berry and vegetable farmers in different regions in Chile, it ensures a quality supply while boosting local economic development. This strategic relationship not only strengthens its expansion plan, but also contributes to the well-being and growth of the communities.

#### Quality and safety standards

 $\rightarrow$  Nutrisco guarantees high quality and safety standards through constant innovation and continuous improvement of its processes. It promotes certifications and information transparency, so that each product that reaches the consumer complies with rigorous safety and quality controls. This approach guarantees fresh and safe products, aligned with the company's sustainability values.

## Nutrisco and subsidiaries

Nutrisco has set out to lead the food business by identifying new trends and investment opportunities that translate into innovative nutrition solutions for consumers.

To this end, the company creates, produces and markets multiple products for human and animal feed. It exports to more than 60 countries, through 50,000 points of sale. In Chile, it has over 6,000 customers and 100,000 points of sale covered directly and indirectly. In 2024, it strengthened its sales office in the United States and created one in Europe.

As of September 2024, Nutrisco consolidated its businesses into a single company, in response to a strategy aimed at putting the customer at the center. The company is now structured around three major business units: Seafood, Fruits and Vegetables, and Snacks.

#### ightarrow Seafood products

This unit comprises the businesses formerly carried out by Orizon Seafood and Fiordosur, which include:

- The extraction, freezing, preservation, processing, manufacturing and marketing of seafood for human and animal consumption and industrial application, and the processing and export of premium seafood products such as cod (Chilean seabass), southern king crab, snow crab, portioned salmon and crab.
- It has a fleet of seven fishing vessels, with a total fishing capacity of more than 9,000 m<sup>3</sup>, and processing plants in southern Chile.

#### RELEVANT FIGURES

- 305,000 tons of fish processed in 2024
- 68% from own fishing and 32% from artisanal fishing
- 24% of industrial catches in the center-south zone
- 96,000 tons of artisanal fishing
- 55,000 tons of fish meal production in 2024, 3.0% less than in 2023.
- 12,000 tons of fish oil production in 2024, 28% less than last year
- 2.6 million cases of canned food production in 2024, 19% more than in the previous year
- 33,000 tons of frozen products in 2024, 41% less than the previous year

#### $\rightarrow$ Fruits and Vegetables

This unit is composed of Valle Frío, which markets frozen fruit to retailers and private labels. It exports to the main retail and food service chains in the world, such as Walmart, Picard, Amazon, Meijer, Trader Joe's, Food Lion, CVS, Pão de Açúcar, Cencosud and Costco, among others.

In 2024 Nutrisco acquired the LiveMore Superfoods brand in the United States, which sells frozen fruit mixes in several formats, including innovative smoothie mixes, with a presence in several supermarket chains. Its products are part of the functional food trend, which has a great commercial projection.

#### $\rightarrow$ Snacks

This business unit includes Flip, a brand of low-oil vegetable chips, whose formula was created by Pedro Bouchon, Vice Rector of Research at the Pontificia Universidad Católica de Chile (PUC), as part of a project co-financed by Fundación Copec-UC. Today the company belongs to Nutrisco and PUC's Dictuc, and has an industrial-scale plant in Santiago.

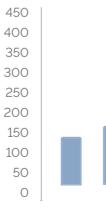

In 2024, the packaging and value proposition were redesigned, in addition to expanding the marketing points, which now include Walmart and Cencosud.

#### Alxar

### Las Salinas

Alxar is a subsidiary that sustainably manages mining operations and projects, with recognized standards of excellence.

In July 2024, the subsidiary Inversiones Alxar signed an agreement to sell its mining project Compañía Minera Sierra Norte S.A. to Capstone Copper Corp. for US\$40,000,000.

Through Alxar Internacional, it has a 40% ownership interest in Cumbres Andinas, owner of Marcobre, which in turn owns Mina Justa.

Mina Justa is an open-pit copper deposit located in the Ica region of Peru, from which ore is extracted and processed, with an average production of 100,000 tons of concentrate and 34,000 tons of cathodes.

#### **RELEVANT FIGURES**

- 120,000 tons of copper sales extracted from Mina Justa in 2024, 16% less than the previous year
- 33 tons of concentrate sold
- 87 tons of cathode sold

The objective of Las Salinas is to clean up a 16-hectare site  $\rightarrow$  Remedia Green Tech located on the coast in Viña del Mar, where fuel and lubricant This company was created under the wing of Las Salinas, storage and distribution plants were formerly located. It will focused on the remediation of contaminated soils, based on use the bioremediation technique, a method that accelerates the experience acquired in the bioremediation project of the the natural process of hydrocarbon degradation through mi-Las Salinas site. croorganisms present in the soil.

The aim is to enable urban development that is environmentally responsible, sustainable over time, and adds value to the city and its inhabitants. With this goal in mind, it is working to establish a dialogue with the authorities and the community in order to jointly build the urban design of the area.

The company is currently preparing for the implementation of bioremediation, which has a five-year time horizon.

It is focused on three lines of business: the sustainable transformation of land with real estate potential, industrial land consulting, and environmental remediation of the mining sector.

## Metrogas

It distributes natural gas for residential, commercial and industrial use in the Metropolitan, O'Higgins and Los Lagos regions, through a distribution network that reaches a total coverage of 6,100 kilometers.

The company operates virtual pipelines, which allow natural gas to be transported in liquid form in trucks from the loading facility of the GNL Quintero terminal to the satellite regasification plants, and then delivered to the several customers through the supply network.

It also offers energy solutions for its industrial customers, such as cogeneration, trigeneration and natural gas vehicle systems.

In addition, it has four service centers located in Santiago, Rancagua, Osorno and Puerto Montt.

#### **RELEVANT FIGURES**

• 907,000 customers supplied in 2024, 3.0% more than in the previous year.

## Agesa

Aprovisionadora Global de Energía (Agesa) sells natural gas to electricity generators and distributors of this fuel. Under a contract with GNL Chile, it supplies liquified natural gas from different parts of the world. In addition, it has a continuous and long-term supply contract with related company Metrogas.

#### Corpesca

It is one of the largest industrial fishing companies in Chile. It manufactures and markets fishmeal and fish oil, establishing itself as a global producer of seafood protein.

Its activities are concentrated in the northern part of the country, with fishmeal and fish oil plants in Arica, Iquique and Mejillones. It also has a storage and distribution terminal in Puerto Montt.

It currently operates a fleet of seven deep-sea fishing vessels, with a total operating storage capacity of 3,410 cubic meters in total.

#### $\rightarrow\,$ Caleta Vitor

It participates in companies engaged in non-fishing businesses related to the production of animal protein meals, the aquaculture production of rainbow trout and the distribution, logistics and marketing of proteins and oils of marine, animal and vegetable origin.

### Golden Omega

centrates, with up to 75% of eicosapentaenoic acid (EPA) and docosahexaenoic acid (DHA). These are obtained from fish oil using patented purification and concentration technologies for export to the global nutraceutical market.

Golden Omega markets its products in 42 countries on five continents. The main destinations for Omega 3 concentrates are the United States, Europe and South Korea. Omega 3 compressible powders are exported to the United States and Europe, and by-products are sold in Chile, China and India.

It has an industrial complex in Arica, with the capacity to man- The company holds the Marin Trust, Friend of the Sea and Dolphin ufacture up to 2,400 tons per year of Omega 3 fatty acid con- Safe certifications, related to the sustainable and responsible use of fishery resources; Orivo, which certifies the authenticity of a marine ingredient regarding its species and geographic origin; Green-e, which certifies that all the electrical energy used in the plant comes from renewable energy sources; Halal, related to Islamic law; Good Manufacturing Practices (GMP) for food supplements; regarding the packaging and distribution of food supplements; and IFOS, associated with product quality. Since 2023, it operates the first seawater desalination plant in Arica, with a capacity to generate around 1,000 m<sup>3</sup>/h of

desalinated water. This ensures continuity of supply for the operation and reduces the supply consumption from the potable water network.

In 2024, it entered into an alliance with Benexia for the commercialization of chia seed oil in North America. Through this partnership, Golden Omega will add a new vegan and natural Omega 3 oil to its product portfolio.

# Long term

Adopting a long-term vision means looking beyond immediate urgencies and acting with awareness of the impact our decisions will have on the future. It means building with patience, perseverance and a genuine commitment to sustainable development, prioritizing lasting well-being over solutions based on simple reasoning focused solely on the immediate. The long term invites us to reflect and plan with a perspective that spans generations, which means betting strongly on innovation, sustainability and respect for the environment. It is, in essence, the conviction that progress is measured in decades. 07. VALUE CREATION FOR SOCIETY 08. ANNEXES BY CHAPTERS 09. FINANCIAL STATEMENTS

## Corporate strategy

04.

Empresas Copec is an investment holding company that seeks mill modernization and expansion project, which completed to create value for its shareholders and society, aiming at the its start-up phase, increasing pulp production capacity by 31%. sustainable development of the business areas in which it invests. There were also important investment announcements, such It has set out to lead in high-potential sectors, with a long-term as ARAUCO's future pulp mill in Mato Grosso do Sul, Brazil, innovative vision that guarantees solid competitive advantages and innovative acquisitions, such as the acquisition of Granja and ensures that it maintains an adequate capital structure, in Solar in Chile, by Copec, and of Gasib in Spain and Portugal, by line with the economic cycles that impact the business and the Abastible, which also created a new subsidiary for renewable nature of each industry. energy solutions: AbastibleTec.

In 2024 it reached important achievements, led by the presentation of the corporate purpose at the Ordinary Shareholders' Meeting, the result of a reflective work that unfolded during 2023. This statement of principles on Empresas Copec's reason for being opens a path towards the future, indicating where to concentrate efforts. It is also a fundamental criterion for selecting investment opportunities and the prospective activities it carries out.

Empresas Copec's investments are aimed at promoting the development of each of its business lines to make them increas-In addition, it was a year in which major investments in production ingly sustainable and aligned with the needs of its customers units were consolidated. This is the case of MAPA, ARAUCO's and stakeholders.

The foundation of all these investments is corporate purpose, as they all aim to shape the world for future generations, and share certain characteristics and cross-cutting objectives:

#### $\rightarrow$ Promoting the sustainable development of subsidiaries

#### $\rightarrow$ Long-term vision<sup>(1)</sup>

The corporate strategy is oriented to the long term. Therefore, it ensures the profitability of the business through a sustainable and efficient management of its capital, which also generates positive impacts on the environment. The large investments made by Empresas Copec do not seek an immediate return, but the creation of lasting value, which is built on scientific knowledge and expert studies. For example, forestry plantations require years to begin to bear fruit; Copec invests today in cargo terminals with the electromobility of tomorrow in mind, and Wind Ventures' investments in startups aim to build businesses that will reach their full potential in the next decade. This corporate value is transversal and resonates with the needs of the country and the world.

Another example of Empresas Copec's long-range vision is the work carried out by the Strategy and Development Department. which is constantly preparing trend studies and sounding out social and technological changes that may open up business opportunities or become threats.

#### $\rightarrow$ A diversified holding company with clear focuses

Over time, Empresas Copec has positioned itself as a diversified holding company, within a specific range of areas that it knows well, in which it has competitive advantages, a significant track record and an ambitious projection. Its strategy and investments are aimed at building and maintaining leading positions mainly in the natural resources and energy sectors. In this line, it seeks to strengthen the value creation capacity of existing businesses and analyzes opportunities to enter new markets

and industries that are opportunities in areas of action known to Empresas Copec and its subsidiaries, and/or have relevant complementarities or synergies with current activities, with good prospects of financial return and generation of economic, environmental and social value.

#### $\rightarrow$ Overseas growth and local expansion

Empresas Copec aims to grow its business and has therefore made significant investments in Chile in recent years, expanding its local production base and its relevance in this market. In this way, Copec and Abastible already enjoy a prominent position in the Chilean energy sector. In the case of ARAUCO, the availability of forestry land has imposed new challenges in the local market. Both realities have prompted the Company to make investments in other countries, such as Brazil and Spain.

Likewise, Empresas Copec is also committed to the development of the countries where it operates, driving the evolution of its businesses so that they contribute to meeting the emerging needs of each market, such as, for example, the challenges of the energy transition. For this sector, it is expanding its offering with products and services designed to support customers in the transformation of their energy matrices, while in the forestry sector it has embarked on the manufacture of new products for sustainable construction. The ultimate goal is to offer, rather than specific products, solutions to customers in all the countries where its subsidiaries operate, striving to build lasting relationships that will evolve over time.

## Sustainable investment and management model of Empresas Copec and its subsidiaries

For Empresas Copec it is important that the development of its subsidiaries and the companies in which it participates is carried out under sustainable management principles that ensure environmental care and social and economic value creation for its different stakeholders. This implies fostering a culture of good practices in all dimensions of the activity.

To this end, it developed a sustainable investment and management model that summarizes its strategic goals and, at the same time, includes commitments and indicators aligned with different global standards, including the United Nations Sustainable Development Goals (SDGs).

# Sustainable financing

Empresas Copec has a financing policy aimed at meeting the criteria of financial soundness, optimal allocation of capital and strategic matching of cash flows. In this way, it ensures the continuity of the business in the long term, an appropriate capital structure and sustained growth over time, which ultimately maximizes its value.

In 2024 the Company published a Sustainable Finance Framework, which establishes guidelines for the issuance of financial instruments aligned with leading international standards<sup>(2)</sup>. Sustainable Fitch gave a Second Party Opinion (SPO), rating the alignment of the framework as "good". This allows Empresas Copec and its subsidiaries to access funds through the placement of bonds and other sustainable financial instruments. In addition, it contemplates a diversified portfolio of 16 project categories, including both environmental and social initiatives. Among the material facts of 2024 in this area, the bond issues conducted by Empresas Copec in Chile stand out, proof of the reactivation of the local market and the confidence that the Company awakens in investors. In all transactions, favorable conditions were obtained, with some of the record rates and spreads of the year in the local market.

#### → UF 1,500,000 bond

In May 2024, it issued bonds for the equivalent of approximately US\$ 59 million. Demand exceeded the amount offered by 2.7 times. The papers were structured under the AC series, with a seven-year term and a placement rate of 3.86%. The proceeds will be used 100% to refinance short and long-term liabilities of the company and its subsidiaries.

#### → UF 1,200,000 bond

In June 2024, it issued a bond for approximately US\$ 48 million. Demand was more than 2.5 times the amount offered. The papers, corresponding to the AD series and maturing in nine years bullet, were placed at a rate of 3.93% and achieved a spread of 93 basis points. The total proceeds will be used to refinance short and long-term liabilities of the Company and its subsidiaries.

#### → Green Bond for UF 4,000,000

In October 2024, it issued its first green bond, for an amount equal to US\$ 163 million, in two series. The first, the AH series, was for UF 3,000,000, with a 20-year term and a rate of 2.98%. The bid/offer ratio reached 1.8 and a spread of 73 basis points was achieved. The second, in the AG series, was for UF 1,000,000 and demand reached 2.3 times the bid, with a placement rate of 3.09% and a ten-year maturity. The spread for this bond was 74 basis points. Both spreads were the lowest of the year in corporate issues. The total proceeds will be used to invest an equivalent amount in energy efficiency and renewable energy projects, among others.

#### → UF 2,500,000 bond

In December 2024, the Company issued 21-year AK series bonds, achieving a placement rate of 3.14% and a spread of 94 basis points. The transaction generated great interest among investors, reflected in a demand of more than 1.6 times the amount offered. The proceeds of this transaction will be used to finance investment projects of Empresas Copec and its subsidiaries.

2. They comprise the Green Bond Principles (GBP), the Social Bond Principles (SBP) and the Sustainable Bond Guidelines (SBG), published by the International Capital Market Association (ICMA); as well as the Green Loan Principles (GLP) and the Sustainable Loan Principles (SLP), published by the Loan Market Association (LMA), the Loan Syndications and Trading Association (LSTA) and the Asia Pacific Loan Market Association (APLMA).

#### $\rightarrow$ Sustainable financing of subsidiaries

In November 2024, ARAUCO conducted a historic placement of sustainable bonds in the Chilean market for a total of UF 10,000,000. The placement rates were lower than the registration rates, reflecting the high demand for the instruments, AC Series bonds for UF 1,000,000, maturing in 2031 and an annual placement rate of 3.05%, and AE Series bonds for UF 9,000,000, maturing in 2044 and an annual placement rate of 2.89%. The company will use an equivalent amount to finance or refinance green or social projects, in accordance with the sustainable debt framework adopted by the company.

In February 2024, the subsidiary Copec obtained a US\$ 200 million green loan to finance new energy and electromobility projects. The loan was analyzed under the Green Loan Principles and certified by Valora Consultores.

# Investment plan of Empresas Copec and its subsidiaries

Over the past six years, the Company has implemented a successful phase of expansion to significantly increase its operational scale.

Investments in 2024 considered resources of US\$ 2.134 billion, of which 60% corresponded to the incorporation of property, plant and equipment, and 21% was allocated to disbursements to acquire affiliates and related companies.

The Base Investment Plan for 2025 commits resources of US\$ 3.014 billion to the growth and maintenance of the holding company's productive activities. The forestry sector accounts for 79.2%, 19.1% will be allocated to the energy sector, 1.1% for the food sector and 0.6% for other activities.

COMPANY	STRATEGIC FOCUSES	MAJOR ONGOING AND FUTURE INVESTMENT PROJECTS	ACQUISITIONS
Copec	Copec's stated purpose is to promote the development and mobility of people, com- panies and the country through its traditional business of marketing liquid fuels and exploring new lines of business that allow to evolve towards an innovative offer in the areas of new energies, new convenience and new mobility. The traditional business continues to grow and will continue to drive the country's mobility for many years to come. At the same time, Copec has developed a strategy to take early advantage of the opportunities opened up by the energy transition. It is thus venturing into different renewable energies, electromobility and convenience options. In addition, through its corporate fund Wind Ventures, it invests in startups that offer innovative solutions for these three areas. The goal is to have the experience, knowledge and alliances needed to invest on a larger scale and become a benchmark in those technologies that will become widespread in the future, leveraged on the company's brand strength.	<ul> <li>→ Convenience</li> <li>In line with its strategy to grow in convenience stores outside the service station network, the subsidiary opened 40 Pronto independent stores during the year.</li> <li>→ New business</li> <li>Copec made investments to increase package processing capacity at Blue Express, which reached a daily maximum of 300 thousand packages. In 2024, 40.6 million packages were distributed, 30% more than in 2023. This historic figure also responds to the fact that during the year the option of receiving and delivering packages was implemented in the vast majority of Copec stations in the country.</li> </ul>	→ Renewable energies Copec acquired Granja Sol This is the first investment o renewable sources to indus → New convenience In May 2024, Copec official Burger. # Mina Justa

#### Example of the corporate sustainable investment model

2024

Mining is a business that requires a long-term vision. Not only because it requires years of development and efforts to obtain profits, but also because the success of mining companies depends on good investment decisions. Empresas Copec had this perspective when it entered mining through its subsidiary Alxar Internacional.

It had already made the strategic decision to participate in medium copper mining, where there is less competition, being off the radar of the large mining companies and out of the reach of small producers. But it also had to find a good asset, which not only implies a deposit with a high percentage of copper, but also with a cost-competitive extraction. In addition to this, a critical requirement was the location: it had to be favorable from a logistical point of view, in an area where it is possible to obtain water supply and where there is a good relationship with the communities. And, last but not least, it was important to find an experienced partner who shared the same values and vision for the future.

After about eight years of searching, Empresas Copec found the right opportunity in the district of San Juan de Marcona, department of Ica, Peru. Its location is strategic according to several criteria: it is close to the sea, which facilitates water supply -- the site uses only seawater, partly desalinated and partly non-desalinated—; the nearest town has a long mining tradition, so its inhabitants have a mostly positive opinion of the mine (over 90%); and the area is not very rugged, an ideal context for the tailings deposit. In addition, the company has partnered with Minsur, a Peruvian mining company with more than half a century of local and international experience, which belongs to the Breca Group, a business conglomerate in the same country with high environmental and safety standards.

All of the above was achieved at Mina Justa, an open-pit deposit with an average production of 100,000 tons of copper concentrate and 34,000 tons of copper cathodes, and a useful life of 16 years that could be extended.

In 2024, the Justa Subterránea project continued to make progress, and, if completed, it would mean the construction of an underground mine below the current pit. This increases Mina Justa's total reserves by 500,000 tons of fine copper, while improving its production profile and extending its useful life. The company is currently working on the engineering and permitting process. If all the necessary conditions are met, production could start in 2028.

In addition, explorations carried out in the same district, whose mining property is owned by Marcobre (the Alxar and Minsur partnership), point to the possibility of other exploitable deposits.

In parallel, Alxar continues to seek new opportunities in copper mining and other minerals in countries such as Chile, Peru, Brazil, the United States and Canada, with the same diligence and strategy of allying with a local partner that knows the particularities of each market.

In the future, and considering that one of the multiple challenges of climate change and the energy transition are critical materials, including copper, Empresas Copec will continue to exploit opportunities in this industry, considering factors such as the scale of the projects, the natural competitiveness of the sites and the jurisdictions that provide certainty regarding the sustainability of the business, as well as the conditions that allow the project to improve by combining it with the Company's capabilities.

in which the Company participates, in response to processes such as the energy transition. The subsidiary Copec has set Empresas Copec promotes the sale of assets in its portfolio itself the goal that, by 2050, most of its EBITDA will come from when it identifies that they can increase their value in other the commercialization of renewable energies and activities hands, and also as an active way to generate value and achieve other than the distribution of fossil fuels, for which it is already a more efficient allocation of capital. transforming itself. This accelerated, among other reasons, for example, the sale of Mapco in the United States in 2023, a sign of the reformulation of the company's investment portfolio. In addition to this, there are also the announcements of the sale of the Sonacol, Metrogas and Agesa businesses.

In 2024, ARAUCO completed the sale of forest plantations it owned in the state of Paraná, which made it possible to leverage part of the capital for the Sucuriú project. The buyer was Klabin, a pulp producer with processing centers close to the transferred assets. The transaction responds mainly to ARAUCO's decision to concentrate the development of forestry plantations in Mato Grosso do Sul, where it will build a pulp mill. In Paraná, it will large timber market in that state.

In this context, during 2024 Terpel agreed to sell its subsidiary in Ecuador, dedicated to the service stations and convenience stores business, and in Peru, corresponding to the operation continue to produce panels, which is possible thanks to the of service stations for the sale of liquid fuels and natural gas vehicles. # Corporate policies and manuals for governance

Empresas Copec has different corporate policies, procedures and manuals to disseminate the principles and values that govern it, as well as to ensure compliance with laws and self-regulation standards.

In 2024, the Habituality Policy was approved. In addition, during this period, the Board of Directors agreed on modifications to the Code of Ethics, the Conflict of Interest Management Policy, the Offense Prevention Policy and the Whistleblower and Consultation Channel Procedure.

# Role of the Board of Directors

The highest body in charge of the Company's management is the Board of Directors, composed of nine regular members elected by the Shareholders' Meeting. The Company must appoint at least one independent director and the Directors' Committee referred to in Article 50 bis of Law N° 18,046.

Empresas Copec's bylaws define the meetings of the Board of Directors as ordinary and extraordinary. The former will be held on the dates and at the times predetermined by the Board itself and will not require special notice. The latter shall be held when specially called by the Chairman, either by himself or at the indication of one or more directors, after the Chairman has gualified the need for the meeting, unless the meeting is requested by an absolute majority of the Directors, in which case the meeting shall be held without prior qualification. The Board of Directors shall hold ordinary meetings at least once a month. Notice for extraordinary meetings shall be given by registered letter sent to each of the Directors at least three days prior to the meeting, which period may be reduced to 24 hours prior to the meeting if the letter is delivered personally to the Director by a Public Notary. The summons to an extraordinary meeting shall contain a reference to the matter to be discussed therein and may be omitted if the meeting is attended by the unanimous majority of the Company's Directors.

The Board of Directors has the following powers and duties:

- → Represent the Company judicially and extrajudicially for the fulfillment of its corporate purpose.
- → Appoint and remove the CEO, chief officers and heads of the different departments and facilities of the Company.
- → Supervise conduct of the CEO and executives, suspend them, dismiss them and set their duties and remuneration.
- → Establish offices, agencies or branches in any marketplace, in or outside the country, and to suspend or suppress them when it deems it convenient.
- → Present to the Ordinary Meetings a balance sheet, inventory and report on the corporate operations of each year, and to propose to the Meeting the distribution of profits and dividends among shareholders.
- $\rightarrow$  Issue the internal regulations needed for the proper functioning of the company.
- → Inspect corporate operations and ensure the exact fulfillment of the contracts entered into.
- $\rightarrow$  Call Ordinary and Extraordinary Shareholders' Meetings.
- → Any other functions conferred by law or other provisions of the bylaws and, in general, to resolve cases not provided for therein.

# Risk Management

# **Risk Management Model**

Empresas Copec's Comprehensive Risk Management Policy seeks to systematically recognize internal or external events that may represent risks for achieving business objectives. This requires the implementation of tools to evaluate them consistently, determine their consequences and be able to develop mitigation actions to keep them at an acceptable level. In order to seek improvements, this policy is reviewed periodically.

Risk management at Empresas Copec is carried out comprehensively, including the Board of Directors, the Directors' Committee, the Chief Executive Officer and the different units that comprise the Company.

	MAIN ROLES	
	Board of Directors	→ It is responsible for ensuring adequate integrated risk manag the necessary resources for its proper management.
	Directors' Committee	ightarrow It reviews, in a supportive and non-resolutionary capacity, ma

# **Risk management process**

Empresas Copec's Comprehensive Risk Management Model is based on the COSO ERM and ISO 31000 international standards, current legal regulations and best practices. It is updated at least once a year by the Risk Management unit.

In order to make monitoring and analysis more efficient, Empresas Copec identifies and manages its risks through an integral matrix, which classifies them as strategic, process, fraud, compliance, crime prevention, etc.

The definition and evaluation of strategic risks are annually reviewed by management, the Risk Management unit and specialists in contingent issues.

In addition, emerging risks related to the business context and environment are monitored and reported to the Board of Directors. The Company annually informs and trains all employees on risk management. In 2024, the session focused on introducing the key concepts related to this topic, reviewing the policy, possible events that could constitute a risk and the list of strategic risks.

# **Risk tolerance**

It is the amount of risk that the Company is willing to accept in order to fulfill its mission and objectives, as well as to preserve and create value, in line with its strategy.

For Empresas Copec it is important to manage its risks within the limits of impact and probability defined in its policy.

The criteria for defining probability may be statistical, based on management's experience or knowledge of the subject matter, or determined by simulation or other techniques.

# **Ethics and integrity**

#### GOVERNANCE

#### STRATEGY

#### **RISK MANAGEMENT**

 $\rightarrow$  Ethics and integrity management at Empresas Copec is led by senior management, with a key role played by the People Committee, which works together with experts in labor law and risk management.

In addition, employees are involved to ensure a collaborative approach to identifying and preventing unethical and unrespectful behavior in the work environment.

 $\rightarrow$  The Code of Ethics establishes the fundamental principles governing the conduct of people working in the company, addressing issues such as personal integrity, antitrust, conflicts of interest, protection of personal data and respect for human rights, in order to ensure a solid basis for responsible decision-making.

- $\rightarrow$  Empresas Copec S.A. has implemented a preventive approach aligned with the National Occupational Health and Safety Policy (DS N°2 of 2024), committing itself to:
- Guarantee respect for the life and physical and psychological integrity of workers.
- Promote gender equity, diversity and inclusion. Encourage participation and social dialogue.
- Continuously improve the management of psychosocial risks. Eliminate or mitigate risks at source.

In addition, the Company reinforces the culture of ethics and integrity through:

- Continuous training, which in 2024 addressed Karin Law and prevention Of harassment and workplace violence.
- A prevention program with clear protocols and safeguards. Complaint management with investigation, protection and sanction procedures.
- Empresas Copec has a Conflict of Interest Management Policy that instructs those who find themselves in a situation of conflict of interest to refrain from making a decision and to communicate it.

 $\rightarrow$  To mitigate risks associated with ethics and integrity, Empresas Copec developed a risk matrix to identify, evaluate and manage possible threats in the work environment. This is done through:

- Detection of risk factors, through surveys and technical analysis.
- Prevention protocol, which includes periodic training. early referral of cases and complaint management.
- Whistleblowing and sanction mechanisms that ensure confidentiality and rigorous investigation in case of incidents.
- Participation of the Joint Health and Safety Committee (CPHS) in the identification and management of psychosocial risks at work.

#### METRICS AND TARGETS

 $\rightarrow$  Empresas Copec measures and monitors the impact of its initiatives through:

- Trainings conducted and level of participation.
- Number of complaints and their resolution.
- Review and update of the risk matrix.

The main objective of these actions is to strengthen an organizational culture based on respect, transparency and ethics, ensuring a work environment free of discrimination, violence and harassment.

Individually, in 2024 Empresas Copec received no complaints of sexual harassment under Law N°. 20,005, nor complaints of labor harassment under Law N° 20,607. In 2024, 100% of all Empresas Copec S.A. employees were trained in the protocol for the prevention of sexual and workplace harassment and violence in the workplace, and the procedure for investigation and sanction to which they are subject.

#### GOVERNANCE

#### STRATEGY

#### **RISK MANAGEMENT**

 $\rightarrow$  For Empresas Copec, antitrust is the basis for the development of the mar- $\rightarrow$  To deepen the commitment to antitrust, a kets in which it participates, since it promotes the generation of wealth, equal opportunities, greater efficiency in production and an increase in innovation. For consumers, it increases their well-being and validates the role of private enterprise.

→ Empresas Copec has a General Antitrust Policy that regulates and strengthens compliance with the principles and standards in this area, which must be rigorously followed and safeguarded by all those who are part of the Company, in order to promote participation in the market with the highest ethical and regulatory standards.

ANTITRUST OFFICER

**BOARD OF DIRECTORS** 

Compliance Program was developed to reinforce the knowledge of all employees in this area and contribute to fostering a culture of respect for the applicable principles and regulations, following the recommendations of the Chilean National Economic Prosecutor's Office and the best management practices in this regard.

 $\rightarrow$  Notwithstanding the duties incumbent on Management, there is a compliance officer in charge of implementing this program with full autonomy and independence, who reports directly to the Board of Directors, which evaluates his or her performance on an annual basis.

 $\rightarrow$  In order to identify risks related to antitrust regulations, the compliance officer conducts a periodic internal analysis. If necessary, he/she may hire specialists in the field, especially in the economic and legal fields.

 $\rightarrow$  The analysis includes the following activities:

- Background survey.
- Identification of risks.
- Determination of risk mitigation measures of such risks.
- Dissemination of the risk elements or situations identified and the measures to be implemented, if applicable.

#### METRICS AND TARGETS

- $\rightarrow$  The Compliance Program considers: Antitrust Policy. • Antitrust regulations.
  - A system for consultations and complaints.
  - A system for reviewing and monitoring compliance with antitrust regulations.
  - Training and dissemination.
  - Annual presentation to the Board.
  - Identification of contractual matters that need to to consider the antitrust principles.
  - Consideration in the annual performance evaluation.

# **Crime Prevention Model** NCG (8.1.5) 🖸

STRATEGY

#### **RISK MANAGEMENT**

 $\rightarrow$  Empresas Copec has an Offense Prevention Model (OPM), which complies with Law N° 20,393 on Criminal Liability of Legal Entities and is headed by an Offense Prevention Officer (OPO), who was appointed by the Board of Directors at a meeting held on August 29, 2024, for a period of up to three years.

 $\rightarrow$  The main role of the OPO is to establish an offense prevention system, especially in accordance with Law N° 20,393. It must also identify, together with the heads of processes, the activities that generate risks; permanently supervise the OPM; constantly reevaluate its execution; and train collaborators, executives and directors,

 $\rightarrow$  The OPO is independent and has full autonomy and resources provided by the company to carry out its duties, in the terms established in paragraph 3 of Article 4 of Law N° 20,393. He/she reports at least every six months to the Board of Directors on the management of the OPM and informs on issues of interest and the necessary modifications to the compliance system.

 $\rightarrow$  The OPO's mission is to ensure that the Company's internal processes and activities have effective offense risk prevention controls. It must also maintain a record of evidence of compliance and execution of these controls.

 $\rightarrow$  Empresas Copec was not sanctioned nor was there any investigation related to the offenses of Law N° 20,393 in 2024.

 $\rightarrow$  During 2024, Empresas Copec updated its OPM, adding new legal risks that were incorporated into Law N° 20,393 during that year. In addition to the above, the main policies and procedures were adapted in accordance with the amendments introduced by Law 21,595 to the criminal liability regime for legal entities.

#### METRICS AND TARGETS

 $\rightarrow$  The Offense Prevention Model is one of the tools of Empresas Copec's Corporate Integrity System, being one of its objectives to ensure compliance with the management and supervisory duties of directors and executives.

 $\rightarrow$  The Company's OPM is under permanent review, and in March 2025 will begin the process of evaluation by an independent third party, in compliance with the provisions of numeral 4 of Article 4 of Law N° 20,393.

# Innovation in the DNA

p.116 p.117 p.122

Empresas Copec promotes curiosity, confronts the establishment and transforms obstacles and mistakes into possibilities for growth, which is why innovation is part of its values.

To shape the world for future generations requires creating for change. Today we are facing a climate crisis, economic inequality and scarcity of basic resources in some regions of the world, which are the consequence of a short-sighted approach and put at risk the future of generations to come. Faced with this scenario, it becomes a priority to change processes, technologies, customs and habits based on short-term logic. Empresas Copec has set out to face these global problems through innovation, a determination that requires projecting several decades, anticipating scenarios and needs, and constantly challenging itself.

The innovative spirit has accompanied Empresas Copec since its origin. It is a differentiating factor that gives it a competitive advantage in the sectors in which it operates and allows it to

- consolidate high-potential investment projects. Over the decades, this approach has translated into practices that have already become ingrained and integrated into its business model, such as trend monitoring, proximity to customers, research and development, and the expansion and substitution of its offering to adapt it to people's needs.
- Empresas Copec's subsidiaries develop initiatives that range from internally promoting a culture of innovation among its employees and forging strategic alliances with international benchmarks to transforming its operations to generate a positive impact on the environment and deliver better services and products to its customers. Thus, they have been incorporating cutting-edge technologies such as Big Data, artificial intelligence, internet of things and robotics, always with the aim of improving its production and commercial processes to contribute to solving global challenges.

## Innovation by sector

## **Forestry sector**

#### STRATEGY

#### **R+D+I PLATFORMS**

 $\rightarrow$  Bioforest

Innovation is an essential part of ARAUCO's strategy, combining ideas, technology, process optimization, creativity and entrepreneurship in the development of new and better solutions for the needs of people and industry, in line with social and environmental sustainability.

This strategy includes collaboration with a wide network of research centers, participation in research programs and investment in innovation projects.

Since 2024, the Bioforest Research Center has focused on developing and implementing knowledge and technologies that add concrete value to the business in a sustainable way, connecting in a more fluid way the participation of the different players involved in research, development and innovation, together with a solid internal process in the management of ideas and projects to ensure their success. For this purpose, it has a high-level team of researchers who are daily looking for new ideas to develop. The aim of this new flow is to get closer to the company's areas and involve them in the projects from the moment they are ideas until they become reality, since their perspective is key for the solutions to respond to current challenges.

It also maintains a broad collaboration network that enables the exchange of knowledge and the delivery of added value to the business through the continuous improvement of industrial and forestry management. And, in keeping with its commitment to the environment of its operations and the surrounding communities, ARAUCO is part of scientific research programs in the ecosystems of which it is a user. During 2024, they carried out a collaboration strategy with different research centers and universities to move forward in environmental and ecological projects. This joint effort has resulted in important progress and discoveries, the final product of which are publications in books and national and international scientific journals, which are disseminated among the authorities and the community, becoming important community management tools. These projects are also integrated into operations as innovation projects.

Thanks to all of these efforts, through research projects, the subsidiary has been able to more fully understand complex natural phenom ena such as climate change. For the benefit of the community and the fulfillment of the SDGs, and as a reference experience for this and other industries, ARAUCO has transformed this knowledge into sustainable practices in biodiversity conservation and ecosystem services.

#### $\rightarrow$ TreeCo

As of September 2023, ARAUCO is a majority shareholder of this U.S. company, a pioneer in editing tree genomes in order to improve their attributes and make them more sustainable. For example, to make them more resistant to disease and climate change, to make their growth more efficient, or to produce more pulp per cubic meter of wood. To do so, they use CRISPR technology<sup>(1)</sup>, which allows genomic editing in living organisms in a non-transgenic way. They are currently working in laboratories at North Carolina State University.

#### $\rightarrow$ Hackathon

The objective of this initiative is to put into practice the knowledge of computer experts in order to solve seven problems of the different businesses. In 2024, 26 IT teams from Chile, Argentina, Brazil, Mexico, the United States and Canada participated.

ARAUCO has spent more than three decades researching and developing new products and services that maximize the value of forest resources. In recent years, its Valdivia pulp mill began producing dissolving pulp, which has environmental and productive advantages over cotton. In addition to this, there are products such as Hilam, structural laminated timber and the housing of E2E, a company fully acquired by ARAUCO in 2023. With a presence in Chile and Brazil, E2E has developed an industrialized construction system based on panels with high thermal, acoustic and resistance performance from certified renewable forests. In 2024, a new innovative service was added to this broad portfolio:

In August, Lemu, an ARAUCO Ventures startup, launched the first private Chilean satellite, called Lemu Nge (which means "eye of the forest" in Mapudungún), designed to observe changes in the planet's biodiversity. It is a nanosatellite with a high-definition hyperspectral camera that captures details imperceptible to the human eye, so it can identify changes or new trends in the environment in a timely manner. Because of this technology, Lemu will be able to offer biodiversity monitoring services to companies or institutions that carry out conservation actions, including ARAUCO.

## **Energy sector**

#### STRATEGY

#### **R+D+I PLATFORMS**

#### $\rightarrow$ Copec

The company has a constant focus on innovation and the development of customer-centric technology Its aim is to create solutions that improve people's quality of life, contribute to reducing the impact on the environment and facilitate connectivity for the mobility of the country.

sidiary Copec Voltex in 2018, through which it entered electromobility. It then expanded into other businesses in new energies, new mobility and new convenience, giving rise to the business ecosystem known as Copec Wind. This platform is divided into two areas:

#### Copec Wind Ventures:

Located in San Francisco, USA, it is a corporate venture capital aimed at investing in startups that offer innovative solutions in the fields of energy, mobility and convenience.

#### • Copec Wind Garage:

New business unit that identifies, incubates and scales innovative ideas that facilitate people's lives on the move.

As a result of the work of these two areas, Copec has a portfolio of heterogeneous companies that provide new solutions in energy, mobility and convenience, with the common denominator of innovation.

#### INNOVATION IN PRODUCTS AND SERVICES

The search for innovative solutions led the company to create the sub- With Voltex, Copec has set out to lead electromobility in Chile and the region. Today it has the most extensive network of chargers in South America. At the same time, through investments and alliances with startups, it is venturing into new energies and technologies to revolutionize last-mile logistics.

#### $\rightarrow$ New battery exchange network

In 2024 Voltex launched the first battery exchange network for electric motorcycles in Chile and Colombia, a service powered by artificial intelligence that allows users to exchange their discharged battery for a new one in less than a minute. As of December 31, 2024, 15 exchange points have been implemented in Chile and 12 in Colombia. The plan is part of an agreement reached between Copec and the Taiwanese startup Gogoro.

#### $\rightarrow$ Sustainable fuels

In 2024, through Copec Wind Ventures, Copec invested in Ineratec, a German startup, leader in the production of synthetic fuels, with which it subsequently signed a Memorandum of Understanding (MOU), with a commitment to explore the production of e-diesel in Chile. This collaboration materialized in the SYNFUELS BIOBIO project, a strategic alliance between Copec, ARAUCO, Abastible and other players, which seeks to build the first industrial-scale plant for e-fuels and by-products in the country.

In December, SYNFUELS BIOBIO was awarded a 3.5 billion pesos fund from Corfo's Technological Program for the Use and Adoption of Hydrogen, a key step that brings the initiative closer to materialization and reinforces its potential impact on Chile's energy transition and security.

#### $\rightarrow$ Blue Express continues to transform e-commerce logistics

The Copec subsidiary sealed a venture capital investment in Reversso, a Chilean start-up that created an automated system for exchanging products in e-commerce, enabling companies to retain up to 80% of sales at risk of return. Several Copec service stations are defined as pickup, shipping or package return points.

#### $\rightarrow$ Abastible

The company drives innovation to meet the demands of its customers, following a strategy focused on offering energy solutions. To this end, it offers comprehensive consulting services, starting with a diagnosis of the energy realities of its customers, and then developing solutions that meet their particular needs, aligned with operational, economic and environmental optimization.

#### $\rightarrow$ AbastibleTec

A subsidiary created in 2024 that focuses on the development of innovative technological solutions that help clients transition to new renewable energy sources, increase energy efficiency, improve their productivity, technologize operational indicators or other needs that require high levels of innovation. It also has a development team, whose mission is to add new services and products through investment in technology-based start-ups interested in growing hand in hand with Abastible.

#### $\rightarrow$ Development of a project to produce fertilizers from green hydrogen

In July 2024, Abastible and the electricity company Comasa signed an agreement to carry out a carbon neutral fertilizer production project using green ammonia, biogenic CO<sub>2</sub> and bio-ash from biomass generation plants. It includes an industrial pilot plant in Lautaro, Araucanía Region, to manufacture the green hydrogen and produce 40,000 tons of fertilizer per year. The US\$10 million investment will be partially financed with a grant from Corfo. AbastibleTec will develop the large-scale engineering and operational risk analysis, while Comasa will provide infrastructure, technology and the technical equipment. Fertilizers are currently imported from China and are made from fossil fuels. This initiative seeks to offer renewable alternatives to local agriculture.

Copec is acknowledged for its innovative role

#### ightarrow "Innovation in Public Service" Award

The company was awarded for its electroterminals for public transportation in the 11th version of the C<sup>3</sup> Creativity and Innovation Ranking, by Brinca, Fundación Chile and Universidad Adolfo Ibáñez Business School. The recognition highlights Copec's commitment to the transformation of urban transportation infrastructure towards cleaner, more sustainable and efficient alternatives.

## $\rightarrow$ N° 1 in the ranking of the most innovative companies in Chile

The subsidiary won first place in the fuel category of the Most Innovative Companies 2024 ranking for developing sustainable energy solutions and diversifying its offering, which now includes renewable energies, electromobility and convenience. In addition, it was distinguished as the most admired company in innovation in Chile.

The analysis was prepared by MIC Business Consulting, Universidad de los Andes ESE Business School and El Mercurio. Corporate innovation capacity is evaluated in seven dimensions, including strategy, culture, and leadership.

#### $\rightarrow$ Leader in Corporate Venture Capital Ranking in Chile

Copec Wind Ventures was chosen the number one corporate venture capital nationally in the latest measurement carried out by ESE Business School, MIC Business Consulting and El Mercurio.

Of its portfolio, four startups have reached unicorn status and three have exited through acquisition or IPO. Among the most notable are Turntide Techonolgies, Galco and Inaretec.

## $\rightarrow$ Digital ecosystem to manage energy resources at Copec EMOAC industrial customers

Energy management is now a key issue for industries of all kinds. For this reason, Copec EMOAC developed in 2024 a digital platform that optimizes the management of energy sources in a precise manner, managing to boost both operational efficiency and operational sustainability. This, thanks to a telemetry system that allows obtaining reliable data in real time from any location, generating key performance indicators for strategic decision making. The results range from optimized operating times to improved resource management. 07. VALUE CREATION FOR SOCIETY 08. ANNEXES BY CHAPTERS 09. FINANCIAL STATEMENT

## Food sector

#### STRATEGY

#### R+D+I PLATFORMS

#### $\rightarrow$ Nutrisco

The company is committed to making a positive impact on the lives of people, industries and the planet through a sustainable nutrition model and a high-standard operation based on constant innovation. Its business model is designed to detect new food trends in order to produce and market nutrition solutions that meet the current and future needs of consumers.

#### ightarrow Nutrisco and CeTA

The company hosts at its facilities in Coquimbo and Coronel the Technological Center for Food Innovation (CeTA), which offers advanced technology for the development of local food innovation ecosystems. The North Center dates from 2020, while the South Center was inaugurated in 2024. It has 235 m<sup>2</sup> equipped with state-of-the-art machinery, laboratories, product development areas and production lines for startups, SMEs and large companies from the Biobío, La Araucanía, Los Ríos and Los Lagos regions to materialize food piloting and prototyping projects.

#### INNOVATION IN PRODUCTS AND SERVICES

Nutrisco's innovation strategy focuses on adding value to local products from fishing and agriculture, which has earned it several awards.

#### $\rightarrow$ Flip obtains B Corp certification

The snack brand, the result of a project co-financed by the Copec-UC Foundation, has its own low-temperature frying technology, which retains 90% of the nutrients of fruits and vegetables, substantially reduces residual oil and makes it possible to fry vegetables that usually cannot be subjected to this process.

In 2024 it was certified as a B Company, a seal awarded by the U.S. organization B Lab, which recognizes companies that meet social, environmental, transparency and corporate responsibility performance standards. The evaluators highlighted Flip's innovative and environmentally friendly manufacturing processes, which were recently strengthened with an environmental best practices manual focused on the efficient management of energy, water and materials.

At the same time, aiming for a new phase of growth, the company has strengthened its position in domestic retail, with a presence in supermarkets such as Walmart, Tottus and Jumbo, as well as expanding into new sales channels through specialized distributors in regions.

#### $\rightarrow$ New product offering

Nutrisco acquired in 2024 the U.S. brand LiveMore Superfoods, based in California, famous for its innovative blends of frozen organic fruits and vegetables for nutrient-rich smoothies. As such, LiveMore is also part of the functional food trend, which has a strong commercial projection. Prior to the acquisition, the subsidiary Valle Frio was already the exclusive fruit supplier for the North American brand.

#### $\rightarrow$ Golden Omega

The proposal of this Empresas Copec related company is based on the development and implementation of effective technological innovations in the world of Omega 3 fatty acids. To realize its vision, it has a team of scientists and engineers dedicated exclusively to research and development, state-of-the-art laboratories and a pilot plant. The company has developed a new generation of Omega 3 purification and concentration processes with international patents and high-value trade secrets. As a result, its products offer high standards in purity and organoleptic quality.

#### $\rightarrow$ State-of-the-art production facilities

Golden Omega has a modern pilot plant for research and development of new and improved products. This allows a continuous process improvement, staff training and efficient delivery of new products and solutions to customers.

#### ightarrow Agreement to distribute vegan Omega 3 in the United States

In August 2024, the subsidiary entered into an alliance with Benexia to market chia seed oil in the United States. Through this partnership, Golden Omega adds a new vegan, natural and sustainably produced Omega 3 oil to its portfolio. Benexia is a Chilean company with operations in Arica, like Golden Omega, and is one of the largest chia producers in the world.

# State-of-the-art technology to care for the sea and ensure quality

The extraction of marine resources - aquatic animals and algae - has increased in recent years. The call from global organizations, such as the Food and Agriculture Organization of the United Nations (FAO), is to establish measures to care for these resources, with a direct request to fishing companies around the world to strengthen the efficiency, inclusiveness, resilience and sustainability of aquatic food systems.

With the help of advanced technology, fishing companies can determine the place and quantity to fish, return protected species to the sea, meet extraction quotas and know the progress of a given production, all while guaranteeing the quality of the products. These types of techniques substantially optimize the efficiency and sustainability of fishing vessels and are already being applied by Nutrisco's Seafood business unit.

The Responsible Fisheries project (a pilot in collaboration with Sernapesca, in the Biobío Region) also uses this technology to remotely certify the capture of pelagic species (which live in areas far from the coast), thus ensuring compliance with the quotas assigned by law.

Moreover, the algorithms also monitor critical parameters such as temperature and storage conditions during transport and processing to ensure quality from the sea to the point of sale.

The implementation of technology is not limited to the sea: in processing plants, tools are used to identify species, sizes and weights during unloading, automating processes and improving accuracy in the certification of landings. In this line, the status of products is monitored in real time, helping producers and retailers to track, for example, expiration dates and rotate food efficiently in warehouses and stores. 07. The focus on innovation by Empresas Copec and its subsid- promotes the creation of strategic alliances between public iaries is not a recent development. In 2002, the Copec-UC Foundation was born, a strategic alliance between the company and Pontificia Universidad Católica de Chile to promote research and the development of innovative solutions to problems that are important for society. It holds annual competitions for young researchers and university students.

In addition, in 2014 it donated resources for the construction of the UC Anacleto Angelini Innovation Center to the same university. It is a space open to companies and enterprises that

and private entities focused on research and development and disseminates scientific and technological progresses in the area of natural resources. Empresas Copec continues to participate in the management of the center.

On the other hand, Empresas Copec has been supporting innovation since 2012 with the Anacleto Angelini Innovative Trajectory award, as part of the Avonni National Innovation Award. In 2024, the prize was awarded to Lemu's founder, Leo Prieto.

## Environmental management approach

#### **Empresas Copec and its subsidiaries** take care of the planet in their corporate investment and production decisions.

Empresas Copec's purpose is a statement of its beliefs and commitment to the well-being and prosperity of people. It means developing its business thinking not only about the current impact, but also about the future benefit, with investments aimed at solving the global challenges we face today as humanity.

The triple planetary crisis - climate change, pollution and biodiversity loss - represents a collective call to action that the company and its subsidiaries consider unavoidable. For this reason, they are implementing responsible operations, supported by an environmental management system with four main lines of work:

- $\rightarrow$  Climate change
- $\rightarrow$  Water resources
- $\rightarrow$  Circular economy
- → Biodiversity

Through its Sustainability Policy, Empresas Copec reaffirms its permanent commitment and responsibility to the sustainable management of its activities.

On the other hand, Empresas Copec has a risk management policy and method to identify risks, evaluate them, assess their impact, mitigate them and monitor them, in order to improve the decision-making process.

Empresas Copec and its subsidiaries operate responsibly and in harmony with the environment. To this end, they guide their performance in management systems that promote innovation, sustainable resource management and the reduction of atmospheric emissions. ARAUCO, Copec, Terpel, Abastible and their respective subsidiaries have environmental management systems certified under ISO 14001 and energy management systems certified under ISO 50001:2018.

The Company permanently promotes compliance with high national and international standards in this area, in order to reduce the possible impacts that may be caused by its activities,

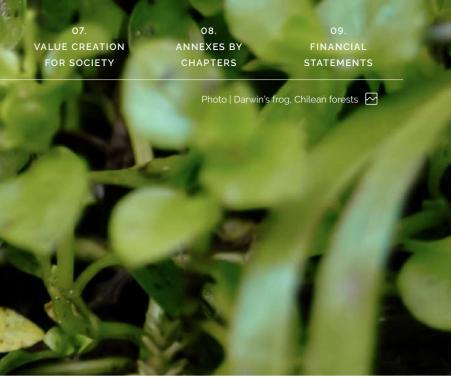

products and/or services. In addition, it fosters an innovation ARAUCO's Environmental and Cultural Change Training Program culture to respond in a timely and efficient manner to the needs provides training for employees in energy conservation, climate of customers, the market and the community, including enviaction and waste treatment. In 2024, the company also provided lectures and training, and active cleaning breaks were held in ronmental challenges. the work environment. In addition, clean points were set within At consolidated level, environmental investment considered the facilities and in neighboring communities.

resources of US\$53.5 million, 39% less than in 2023. This dif-

ference is mainly due to the end of construction of ARAUCO's ARAUCO has a system for constant monitoring of the resource MAPA project, which is partially offset by the incorporation of in the watersheds and has defined controls and mitigation the Las Salinas cleanup work in 2024 measures to continue guaranteeing strict compliance with applicable standards, both for effluent discharges and for the One of the actions that the Company carries out regarding its safe supply of the plants. stakeholders is to provide ongoing training on sustainability issues.

The subsidiaries join Empresas Copec's commitment by developing actions and plans that enable the fulfillment of these objectives. The following are some of the initiatives carried out by the subsidiaries in this regard:

· Copec develops energy efficiency training programs for employees and external collaborators whose work is directly related to the organization's energy performance.

## Environmental impact monitoring NCG 461 (8.1.3) 😔

Empresas Copec and its subsidiaries seek to operate in harmony with their natural environment. To this end, they develop management systems that not only comply with current environmental regulations, but also go beyond them, adopting practices and standards that exceed regulatory requirements and promote innovation, sustainable resource management and the reduction of operational emissions.

#### $\rightarrow 4$ FORESTRY SECTOR

ARAUCO's ongoing monitoring and evaluation system captures and provides information for forestry management. Regular evaluations and follow-up allow to warn of problems, highlight opportunities, draw lessons and guide efforts. Based on performance indicators, the subsidiary establishes work plans and specific actions for the continuous improvement of its processes, thus ensuring compliance with sustainable forestry management requirements and consistency with its corporate values.

#### $\rightarrow$ $\Rightarrow$ ENERGY SECTOR

Copec has an Environmental Management System (EMS), which is externally certified according to ISO 14001 for three scopes: "Storage and distribution of fuels and lubricants in mining establishments", "Transportation of fuel, from loading, at the San Vicente and Concón plants, to delivery at Arauco plants located in Horcones, MAPA, Valdivia, Nueva Aldea, Constitución and Licancel" and "Sale, purchase and delivery of marine fuels to vessels that require it at ports along the national coast, by tankers, pipelines or trucks". It also conducts internal audits to ensure compliance with the parameters established in the system.

Terpel has an integrated environmental monitoring framework that facilitates the follow-up of the main indicators for impact and risk analysis, as well as their disclosure.

With its environmental management system, Abastible seeks to ensure that all processes comply with applicable regulations and maintain high operating standards. This mechanism is used

to manage the operational and regulatory controls of each plant Under Law N° 19,300, companies are required to submit to emissions from electricity consumption, driving and generation the environmental authority environmental impact studies or efficiency, and waste treatment statements for any project or activity (or significant modifications thereof) that may affect the environment, in accordance with the criteria of such regulation. In addition, they may only execute  $\rightarrow$   $\blacksquare$  SECTOR ALIMENTOS the projects or activities once these submissions are approved through an environmental qualification resolution (RCA).

Nutrisco Seafood has a program of compliance with the General Law of Fisheries and Aquaculture (LGPA for its acronym in Spanish), covering its entire value chain, from the operations of navigation and supply of raw materials, processing, storage and transportation of products to their availability to its customers.

## **Environmental regulations in Chile**

This law and other related regulations also establish procedures for citizens to make observations on the content of the statements or studies submitted by project owners, and to challenge the validity of the RCAs. In this regard, affected citizens, public agencies and local authorities can demand compliance with environmental regulations in the event of damage to the environment.

Non-compliance can result in the revocation of permits, temporary or permanent closure of industrial facilities, fines and warnings.

## Energy sector

#### ENERGY EFFICIENCY AND LOW CARBON SOURCES

Copec

COMPANY

The subsidiary Copec is implementing its Carbon Footprint Management Plan to achieve carbon neutrality in 2030 and reduce 40% of Scope 1 and 2 emissions compared to the *business as usual* scenario. It includes different initiatives, such as renewable energy contracts, fleet electrification, solar panels at service stations and air conditioning in convenience stores, among others.

#### $\rightarrow$ Environmental investments to optimize operations

The subsidiary obtained the Giro Limpio seal in 2024 from the Energy Sustainability Agency and the Ministry of Energy. This is a new milestone in its efforts to reduce the carbon footprint of fuel and lubricant transportation. During the year, more than 75% of its products were transported by carriers with this seal.

#### LOW CARBON PORTFOLIO

Copec has proposed to progressively replace the commercialization of fossil fuels with NCRE-based solutions in order to accompany its customers in their energy transition. The strategy is to have a comprehensive offering that includes everything from the generation and sale of green energy to energy efficiency and storage services. To this end, it has invested in leading global energy intelligence companies through its Wind Ventures investment fund, in addition to the Wind Garage innovation platform.

#### $\rightarrow$ Generation and marketing of renewable energy

• Granja Solar: To strengthen its electricity supply business, Copec acquired the Granja Solar photovoltaic farm in Tarapacá, Chile, in 2024. The US\$91 million investment includes an electrical substation and a 23.4 km transmission line connected to the SEN. The plant has a generation capacity of 123 MWp; moreover, starting in 2026, it will have a BESS battery system with a storage capacity of 420 MWh and an injection capacity of 105 MW, which will ensure a stable and continuous supply. Transelec is responsible for the construction and operation of the system, while EMOAC, a subsidiary of Copec, is responsible for energy sales.

#### COMPANY ENERGY EFFICIENCY AND LOW CARBON SOURCES

Copec

#### $\rightarrow$ Renewable energy operations

Copec service stations in Chile have the Carbon Neutral seal, the result of a strategy that combines the measurement and certification of its carbon footprint, the use of non-conventional renewable energies and the purchase of carbon credits.

The subsidiary also continues to deploy the My Footprint program, which through the Copec App proposes customers to contribute to offsetting their emissions from fuel consumption (both those emitted by burning fuel and those from production processes) by purchasing carbon credits from sustainable projects, in a 1+1 format: the company pays 50% and the customer pays the other half.

#### **RELEVANT FIGURES•** 8 stations with solar panels

- 65 stations and 5 plants supplied with renewable energy from Cerro Dominador
- Compensation bonds in Luz Norte (solar project in Chile), Tambopata Bahuaja (forestry project in Brazil) and Santa Clara (wind project in Peru).

One of the milestones of 2024 in the reduction of emissions was the beginning of the implementation of the first hybrid truck for transporting lubricants in Chile. Under this initiative, a diesel truck was modified to be assisted by an electric engine, which is expected to reduce fuel consumption and its carbon footprint by 15% to 20%.

In addition, its subsidiary Blue Express has been awarded the IMELSA Energía Green Seal, which accredits the use of green energy in its operation.

#### LOW CARBON PORTFOLIO

- Expanding the use of solar energy: Copec Flux and Chilean fintech Galgo have partnered to facilitate the incorporation of solar panels in homes in the Metropolitan and Valparaíso regions. The agreement will allow Flux customers to acquire panels 100% digitally, without the need for an initial investment.
- Renewable diesel: Copec completed the first import in Chile of diesel made from hydrotreated vegetable oil, which is obtained from vegetable oils and animal fats. It emits up to 95% less CO<sub>2</sub> compared to fossil diesel, making it an alternative for industries with high energy consumption. Initially, this fuel was used in the primary fleet of trucks supplying mining clients in Mejillones, Antofagasta Region.
- Green hydrogen: The startup H2Pro is developing low-cost electrolyzers, while Copec plans to incorporate green hydrogen in the ground operations of the Nuevo Pudahuel airport by 2025 and in zero-emission airplanes by 2035.
- Synthetic fuels: Copec announced its investment in the German company Ineratec to develop synthetic fuels based on hydrogen and captured CO<sub>2</sub>, a sustainable option to decarbonize industries that cannot be electrified.
- $\rightarrow$  Renewable energy storage
- Agreement with Grenergy: Under an overnight sales contract signed in 2024, the global clean energy company Grenergy will supply Emoac with 8 TWh for 15 years. Thus, the Copec subsidiary strengthens its position as a leader in storage. This technology makes it possible to capture renewable energy and inject it at night, making it a pillar of the decarbonization of the electricity system.
- $\rightarrow$  Energy efficiency
- Intelligent motors: Copec Emoac successfully implemented more than 600 Turntide efficient motors at Walmart in the Metropolitan Region, a project that will continue to expand with more than 300 motors for other regions of the country. This technology saves up to 30% in energy consumption for air conditioning.
- In 2024 Copec also invested in Optibus, software driven by artificial intelligence and optimization algorithms available in the cloud, which operates public transportation systems to make them more efficient. It has presence in 5,000 points globally, including the Metropolitan Region.
- $\rightarrow$  Electromobility
- Copec Voltex is a leader in electric vehicle charging infrastructure, with a network covering more than 2,200 kilometers in Chile, where it operates the largest electric vehicle charging terminal in Latin America. It also has fast charging stations in Panama, Ecuador and Colombia.
- New electro-terminal: The subsidiary announced the construction of an electro-terminal in Penco, Biobio Region, which will have eight high-power chargers. It will be the first of its kind in southern Chile and will replicate those already existing in Santiago and Antofagasta. The initiative is part of the "Renueva tu micro" program by the Ministry of Transport and Telecommunications.
- Bidding: Copec Voltex was awarded 70% of the new charging infrastructure in the last bidding process for public transportation in Greater Santiago, which will allow the construction of 14 new electro-terminals that will supply 895 electric buses. In addition, the renewal of the fleet of two operators (Metropol and Vule) was awarded, adding seven new terminals, equivalent to a total of 1,418 buses. This translates into a 58% market share in the Metropolitan Region. In addition, we acquired the first electroterminal outside the Metropolitan Region, in Concepción.

#### COMPANY ENERGY EFFICIENCY AND LOW CARBON SOURCES LOW CARBON PORTFOLIO Abastible $\rightarrow$ Renewable energy operations $\rightarrow$ Energy transition The Concón facility has a photovoltaic plant with an installed capacity of 118 kW, con-Liquified gas (LPG), composed mainly of butane and propane, has a lower carbon footprint than diesel, coal and wood, which are still used in Latin American industries and nected to the SEN under the Small Means of Distributed Generation (PMGD) regulations. households. For this reason, it is considered a transition gas for developing economies, as it allows them to reduce their footprint while they move towards energy systems It covers 25% of the plant's electricity consumption and reduces emissions by 53 tCO<sub>2</sub> based on NCRE. In this scenario, Abastible has positioned itself as an energy partner for customers who want to incorporate LNG in their production processes. The subper year. sidiary not only supplies gas, but also advises them on the transformation of their matrices. • Boiler replacement at Corpesca: One of the most important projects in 2024 was the replacement of an oil-fired boiler with a LPG system at one of Corpesca's plant which is intensive in the use of energy. • Import facility: Colgas, a subsidiary of Abastible, began construction of new infrastructure for importing LPG into Colombia in 2024. It will be located at the port of Okianus Terminals, in Cartagena de Indias, and is expected to start operations at the end of 2025. The US\$60 million investment will guarantee the supply of LPG to the Colombian market, with a focus on the energy transition.

#### $\rightarrow$ Generation and marketing of renewable energy

For decarbonization and energy efficiency solutions not based on LPG, the company launched AbastibleTec in 2024, which already offers several service alternatives, such as optimization of thermal power plants; design, construction and operation of photovoltaic plants; electricity supply with 100% renewable energies; support in the transition to electric mobility; and monitoring platforms with artificial intelligence to predict and optimize processes behavior. It also studies new and innovative solutions:

• Green hydrogen (H2V): Together with the Ministry of Energy, AbastibleTec is a pioneer in the development of engineering and design of industrial-scale H<sub>2</sub> and LPG blending projects. In 2024 Abastible and electricity company Comasa agreed to carry out a carbon neutral fertilizer production project using green ammonia (obtained from hydrogen), biogenic CO<sub>2</sub> and bio-ash from biomass generation plants, partially financed with a Corfo fund.

## Carbon footprint management GRI (305-1 / 305-2 / 305-3) 🛇

# ARAUCO was certified as the world's first carbon-neutral forestry company in 2020.

The carbon dioxide that it captures in its forests and wood products exceeds its global emissions. The company certifies carbon capture with PwC and carbon neutrality, with Deloitte.

# Copec was able to neutralize CO<sub>2</sub>e emissions from its service station in 2021, a milestone certified by Carbon Neutral.

Compensations carried out through the My Footprint program are verified by SCX.

The Group's greenhouse gas (GHG) emissions are consolidated according to an operational approach and verified by Deloitte. In addition, each subsidiary carries out its own verifications:

#### $\rightarrow \Leftrightarrow$ Forestry sector

ARAUCO audits and certifies its carbon footprint on an annual basis with AENOR, including scopes 1, 2 and 3. In 2024 the company worked on adding downstream measurements of scope 3 to the footprint, which contemplate aspects of the life cycle of its products.

#### $\rightarrow$ $\clubsuit$ ENERGY SECTOR

Copec measures its footprint in scopes 1, 2 and 3. The measurement of the first two is verified in accordance with ISO 14064/2018 standards. Scope 1 includes fuel consumption

in generators, company vehicles (trucks, vans, ships), boilers (natural gas) and third-party trucks that provide exclusive services to Copec, as indicated in the IPIECA guide. Meanwhile, Scope 2 considers electricity consumption in service stations, convenience stores, production and storage plants, offices and distribution centers. Scope 3 encompasses indirect emissions occurring in the company's value chain, including those from processing of products sold, energy lost in electricity distribution, the outsourced transportation (except for fuels and lubricants), business travel, and waste from stations, distribution centers, offices and plants.

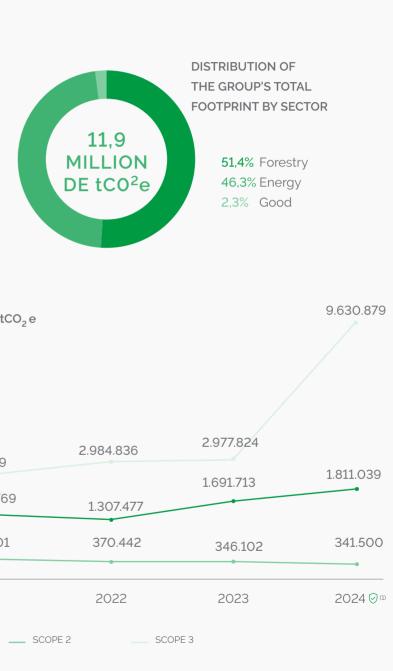

Abastible measures and verifies its carbon footprint through Bureau Veritas under the ISO 14064 standard. The calculation incorporates its activities within scopes 1 and 2, and those of the value chain in scope 3, including data on energy consumption, water use, waste disposal and transportation, among others. TOTAL CARBON FOOTPRINT tCO2e

2.507.561	2.537.079
1.403.512	1.391.76
481.640	437.30
2020	2021
SCOPE1	

🖓 Indicator verified by Deloitte. For more information see section "External verification" in chapter 8.

1. The increase in Scope 3 emissions is attributed to the forestry and energy sector. On the one hand, there was an update in the calculation methodology in the shipping industry that impacts the emissions associated with the transportation and distribution of products of the subsidiary ARAUCO, and the increase in the acquisition of fertilizers for application in new forests. On the other hand, the subsidiary Terpel recalculated its footprint due to certain factors such as the update of CO<sub>2</sub> emission coefficients in Scope 2 and the reclassification of some emission sources, transferring emissions from Scope 3 to Scope 1. In identifying opportunities for improvement, Terpel focused on the consolidation of emissions in Scope 3. In addition, in 2024, estimates were added for emissions generated by transportation of affiliated gas stations and by the transfer of products with its own fuel. In addition, emissions from the energy consumption of the Voltex and Gogoro business lines were analyzed, as well as emissions generated by the transportation and final disposal of waste.

  - 29% of the freshwater withdrawn in 2024 came from areas with initial high and/or extremely high water stress.

ic and efficient water management.

30% by 2025.

plemented to improve the measurement of the water footprint, based potprint measurement pilots at Orizon Coronel and Valle Frio Romeral.

## ☆ Forestry sector

Forests and forest plantations have beneficial effects on the hydrological cycle: they help retain moisture, reduce soil loss, regulate riverbed temperature, promote osmosis and improve water quality.

The forestry plantations do not use irrigation water, while the company's industrial facilities are supplied with surface or groundwater. ARAUCO promotes its sustainable use to ensure its provision for flora, fauna and human development. In this regard, it manages and protects the rivers from where it extracts the resource through rigorous monitoring of its availability and responsible management practices, applying a policy of delimiting and prioritizing watersheds. In 2024, it continued to implement projects and plans to reduce consumption and increase water efficiency.

#### $\rightarrow$ Liquid effluent management (riles) generated in industrial plants

The tailings are subjected to treatment systems and constantly For more than a decade, ARAUCO has been developing the Water Challenge management strategy in Chile, which involves collaborative work with the community and the authorities. It has already supported more than 55,000 people through 145 collective solutions to gain access to drinking water, providing studies, engineering and even land for the development of small and large projects. In addition, it is working on enabling methods to measure the parameters of the water flowing in nearby forest watersheds.

monitored to ensure that they do not exceed the maximum concentration and load levels regulated by environmental standards. Likewise, there are also scientific research programs associated with sampling and measurement of some relevant environmental variables. All of ARAUCO's industrial facilities have primary and secondary treatment for liquid effluents. In two of them, located in Chile, tertiary treatment is added:

Valdivia, on a permanent basis, and Nueva Aldea, when the effluent is discharged into the river and not into the sea.

In addition, the subsidiary is working on the development of alternatives for the recirculation of effluents to processes. A pilot project for the treatment and recirculation of effluents in the industrial facilities of the pulp and energy area to avoid their disposal in rivers and the sea, is currently in the research stage.

#### $\rightarrow$ Water Challenge

#### **Energy sector** \$

The subsidiaries in this sector consume water from the grid, groundwater and tanker trucks in operations that include administrative and production areas, service stations, stores, plants and storage.

The operations of the subsidiary Copec are not intensive in the use of the resource. However, it carries out initiatives related to water management, mainly limited to irrigation, sanitary services and food preparation, with which it aims to reduce its consump-

tion by 30% by 2025. The goal is to implement 160 sustainable gardens (with efficient irrigation and species that require less water) at service stations. During 2024, Copec added seven new gardens, reaching a total of 65. In the same line, its three Lavamax laundry system formats have efficient use systems.

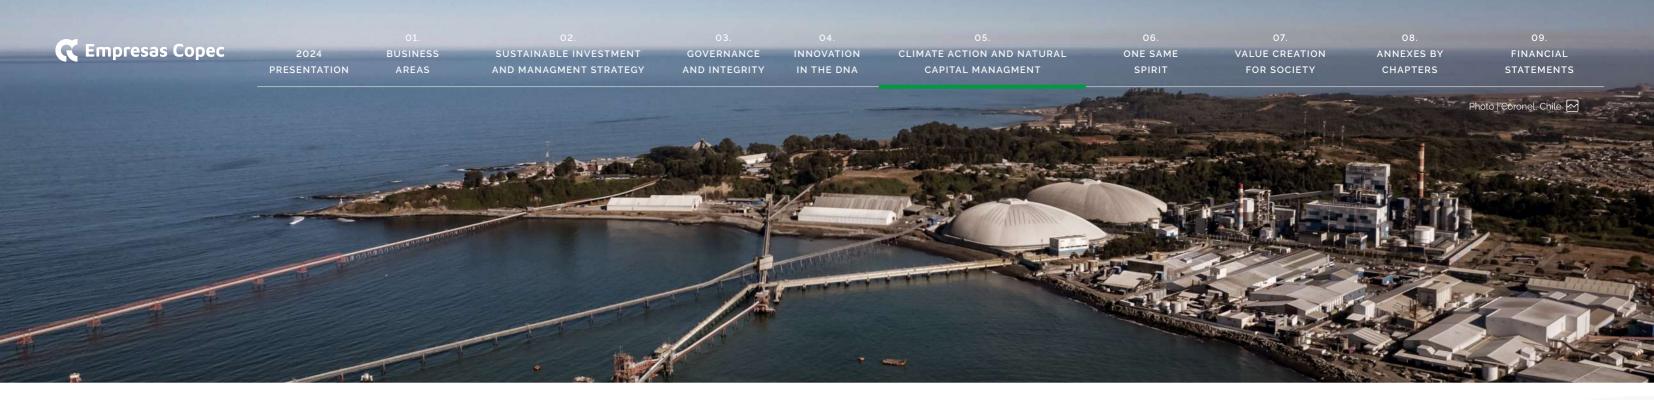

As for Copec's plants, the Pureo plant in Calbuco has a rainwater collection system that provides about 70% of the necessary supply.

#### $\rightarrow$ New plant that extracts drinking water from the air

dense pollutant-free water vapor from the air. The pilot was set up in October at the Copec service station on Route 68, in the the startup Source Global. The plant has the capacity to produce more than 250 liters of water per day under optimal conditions.

- municipality of Pudahuel, Santiago, through a partnership with 109.3 thousand m<sup>3</sup> of water saved in 2024 thanks to sustainable landscaping.

#### Food sector

Nutrisco Seafood extracts seawater from the bays of Coronel and Coquimbo for the production of frozen fish, canned fish, fishmeal, fish oil and for its fleet. The rest of its facilities are supplied with potable water from the sanitary network.

The largest consumption is concentrated in flour production, raw material unloading, and the production of canned and frozen fish, processes that also generate riles, or liquid wastes that are treated with a physico-chemical process before being discharged through the outfall. In addition, the subsidiary carries out monitoring campaigns through the Environmental Surveillance Program (PVA) with other companies to determine environmental conditions of the riles from the coastal area adjacent to the submarine outfall.

ludes all countries where the company is present.

rations associated with plants, service stations and convenience store

le packaging and sourcing guidelines. In addition, they will identify new or the circular economy.

## ♣ Forestry sector

As part of its environmental commitments, ARAUCO's strategic focus is to reduce, manage, reuse and recycle waste, in line with Chile's circular economy model. To achieve its 2030 goal, it is implementing a management plan with four main objectives:

- $\rightarrow$  Optimize the use of resources and inputs.
- $\rightarrow$  Reduce the volume of waste generated.
- $\rightarrow$  Provide market opportunities for waste managers, recyclers and revaluators.
- $\rightarrow$  Involve employees and the community in achieving the environmental and social benefits of this management.

In 2024, further progress was made towards the goal. Key to these efforts have been the recovery centers at the Valdivia and Constitución pulp mills, where process waste mainly ashes from the power boiler and impurities from the causticizing area, are

mixed to generate two types of products: a soil improver (substrate) for agricultural use and a seal layer for sealing sanitary tanks. In addition, work with external valorizers and the direct use of some waste as filler material or input for paving stones, among other purposes, are encouraged.

In the timber business, the company seeks to develop a treatment process for non-recyclable waste, so that it can be co-processed or revalued, including bark. In addition to creating internal initiatives and capabilities, alliances have been signed with startups, local universities and other research centers.

The removal, transportation and disposal of hazardous waste from industrial plants is carried out by specialized and authorized entities, in accordance with the regulations.

As part of its environmental commitments, ARAUCO's strategic mixed to generate two types of products: a soil improver (sub-focus is to reduce, manage, reuse and recycle waste, in line with strate) for agricultural use and a seal layer for sealing sanitary was recovered in 2024 in the pulp, energy and timber business.

## Energy sector

The subsidiary Copec revalues its waste in nine plants thanks to the implementation of infrastructure, training plans and synergies with specialized waste managers. It also installs waste management points at service stations and convenience stores, where the number of tons of waste that are revalued increases every year.

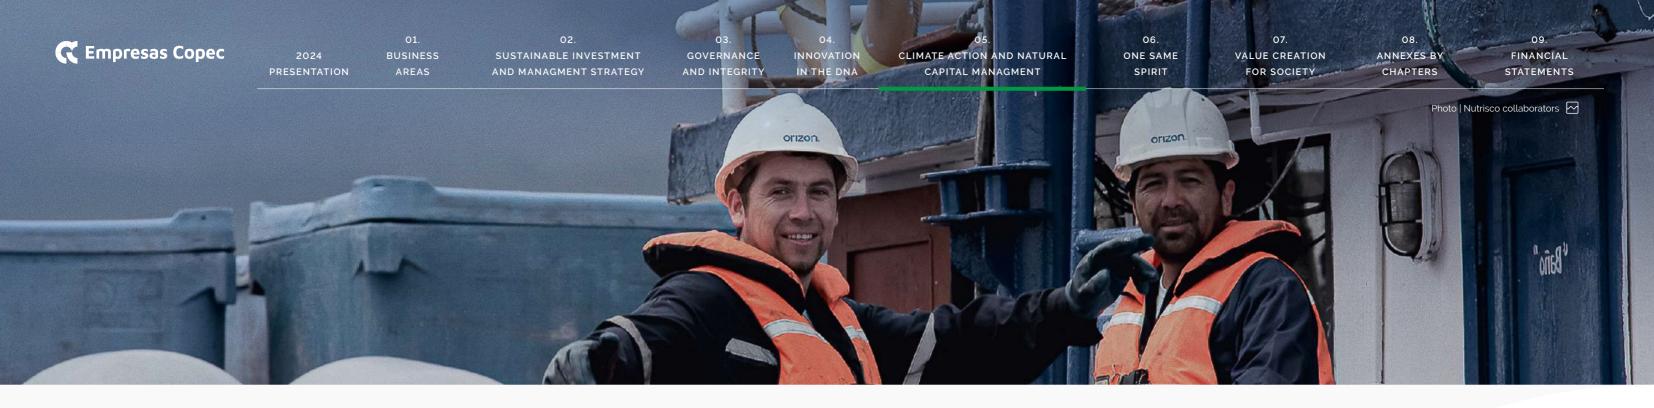

Regarding organic waste, the company has a partnership with Food For Future to transform it into animal feed, and in collaboration with Rendering, it reuses frying oil as a supply for the production of biodiesel. In 2024, they managed 196 tons of oil, reaching, since 2012, the recycling of 1.4 million tons.

RELEVANT FIGURES• 2.076 tons of waste recovered in 2024. 101% more than in 2023.

• The entire Pronto store network has waste management points.

Terpel is also developing initiatives to extend the life cycle of Abastible is working to reduce the amount of waste sent to containers and packaging materials. The greatest opportunities landfill with initiatives such as the implementation of a biodiare in the lubricants and convenience store businesses. One gester at its Maipú plant, where all the organic waste from the example is Green Pass, a program designed for the proper man- employees' casino is processed. This is converted into a liquid agement of these products from manufacture to final disposal. with the necessary characteristics to be discharged into the The goal is to collect 30% of the containers sold in its stores sewage system. In addition, in 2023 it conducted an exhaustive by 2025. On the other hand, the Colombian subsidiary is comreview of its facilities to identify non-hazardous assets that are mitted to reducing 95% of plastic in processed food packaging in disuse or obsolete. materials in stores by 2025 and 100% by 2030.

## Food sector

Nutrisco Seafood's fleet is certified by the Sustainability and Climate Change Agency (ASCC) in compliance with the goals and actions of the Clean Production Agreement "Sustainable management of solid waste assimilable to household waste in industrial fishing vessels". The purpose of this agreement is to reduce the production of this type of waste in the operations of the Cerco Sur fleet in order to prevent and minimize impacts on the marine environment.

In addition, it is carrying out the Zero Garbage to Landfill project, which consists of identifying, segregating and properly disposing of waste in order to increase its recovery. As part of this initiative, recovered fishing nets are donated to the NetPositiva recycling

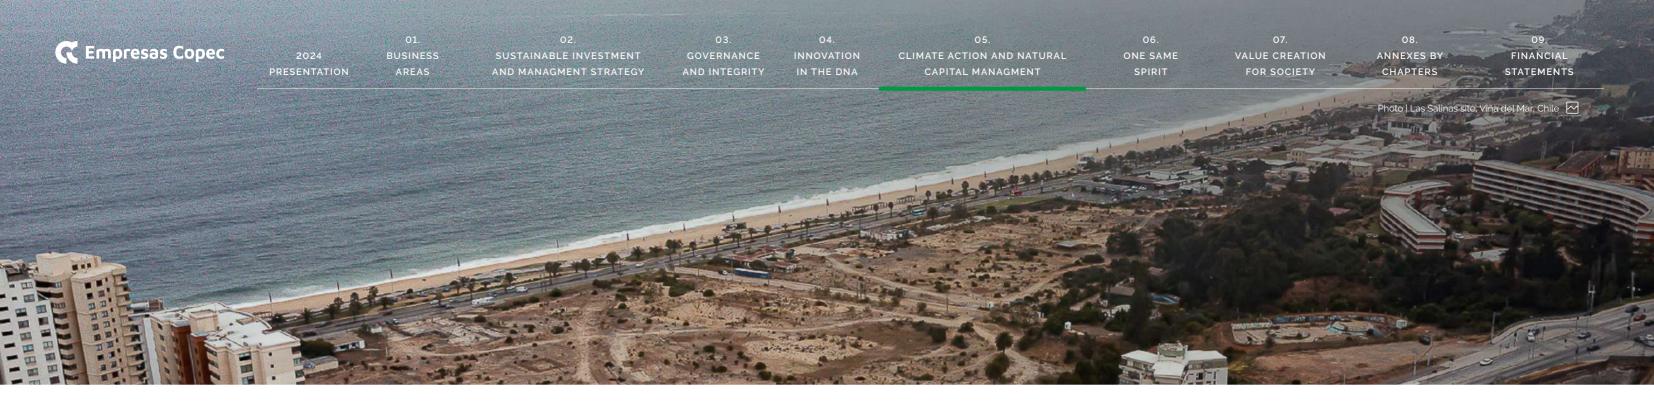

program so that the Bureo company can later convert the plastic obtained from these nets into products such as skates, sunglasses, chairs, hats and jackets for the Patagonia brand.

Flip uses recyclable packaging and manages its waste through two companies: Rendering for oils and Caja Verde for organic waste, wood, paper, etc.

Golden Omega, supported by Reciclos, is the first company in Arica to use composting to recover organic matter from its workers' casinos to produce agricultural fertilizer. RELEVANT FIGURES• In 2024, 17.2 tons of fishing nets were converted into raw material for new products and 130.7 tons since the beginning of the program.

## \* Other investments

#### Las Salinas Project

## $\rightarrow$ Soil bioremediation at the service of the community

In December 2023, Las Salinas disclosed its urban vision for the future of the 160,000 m2 site located on the Viña del Mar coastline, where a hydrocarbon storage center was formerly located. The proposal, called Las Salinas VA!, is the result of 20 years of work, during which more than 5,500 consultations and 1,000 meetings were held with different organizations to gather the community's wishes and generate the basis for an agreement on the final destiny of the site.

Among the main characteristics of this vision is that more than 40% of the land will be destined for public use, including a park of about two hectares and green areas to connect the water-front with the upper sector of Viña del Mar. It also proposes the development of medium-height buildings to protect the surrounding views.

In May 2024 concluded the bidding process called by the real estate company for the final cleanup of the first part of the site (South), a necessary action for the subsequent urbanization. French company Séché Group was awarded the contract, in which IDOM will also participate as project manager, providing technical advice and field monitoring.

Soil cleanup will be carried out by means of bioremediation, a technique that uses microorganisms present in the soil to degrade contamination. During the year, detailed engineering and initial works began, including a topographic survey, the use of geodetection technology in the contour, perimeter enclosure, and noise mitigation works.

Once the remediation of the first part is initiated, a process that will take about two and a half years, work will begin on the bidding for the second half. The complete remediation of the 16 hectares could be completed by 2030.

## New subsidiary Remedia Green Tech

The experience gained through the Las Salinas project is relevant not only for Viña del Mar, but also for the country, as it represents a possible route to address the recovery of more than 10,000 sites with different levels of contamination in Chile. For this reason, Las Salinas created Remedia Green Tech, a company that will gather all these learnings to apply them in three lines of business: the sustainable transformation of land with real estate potential, consultancy for industrial land and environmental remediation in the mining sector. The new firm already has contracts in three regions.

## Biodiversity care

Empresas Copec's subsidiaries with the greatest impacts have established commitments to promote biodiversity conservation in their direct operations and in the development of new businesses, without deforesting or degrading the forest or native vegetation. We are aware of the role that biodiversity plays in sustaining the well-being of people and economic activities. To this end, a first step was taken by conducting a self-diagnosis of biodiversity impacts and dependencies for Empresas Copec. The expectation is to extend the approach to subsidiaries and align ourselves with the recommendations of the Task Force on Nature-Related Financial Disclosures (TNFD) and other international standards.

## **Biodiversity Action Plan**

In 2024, Copec, ARAUCO and Nutrisco joined the strategic committee in charge of designing the Corporate Biodiversity Action Plan, promoted by the Ministry of the Environment and Acción Empresas. The public-private initiative aims to involve the private sector in environmental conservation, aligning it with global and local goals. Financed by the Global Environment Facility (GEF), the plan has several participatory bodies, including a working group and macro-zonal workshops. The results of the multi-sector roundtable were presented at the COP16 on Biodiversity, held in October 2024 in Colombia.

Chile is the fourth country in the world to implement such a program.

## ♣ Forestry sector

In 2003, ARAUCO made a voluntary commitment not to replace native forest or encourage its replacement by third parties. In this regard, the company has developed protocols and policies to guarantee the protection and conservation of biodiversity, including:

• The application of a certified forest management scheme that aims to ensure that plantations grow faster than the harvest rate. In this way, an environment is created that allow the transit of most species, in an integrated landscape that reconciles the care for biodiversity, ecosystem services and economic development.

• The connection, by means of watercourses, of the sectors of native or protected vegetation located within the subsidiary's patrimony.

• Continuous research and monitoring of the status of native flora and fauna in areas of high conservation value, to detect possible threats and activate management and protection plans.

- capital found within the company's assets.
- The implementation of a restoration program.

In February 2024, ARAUCO signed an agreement with Conaf and Universidad de Concepción to generate key information to preserve the Nonguén Park, whose native forest represents the native biodiversity of the Biobío Region. Sensors, geographic information systems, cameras, drones and artificial intelligence, as well as LiDAR and hyperspectral imaging technologies will be used to produce three-dimensional maps where it will be possible to identify species and forest heights. Thanks to these

resources, Universidad de Concepción will carry out research to generate relevant knowledge, while Conaf will have more information for proper park management.

• The commitment to account for and inventory the natural As highlighted in the "Innovation in DNA" chapter of this report, the subsidiary has a satellite to monitor biodiversity, Lemu Nge or "eye of the forest", which is capable of identifying changes in ecosystems through a high-definition hyperspectral camera.

> In August, the company also joined the global campaign "It's now for nature", led by Business For Nature, a coalition of organizations and companies committed to reversing the loss of nature and achieving a positive economy for the environment and humanity by 2030. The campaign encourages companies and financial institutions to develop and publish a nature strategy. ARAUCO's strategy has already been approved by the entity.<sup>(2)</sup>

**RELEVANT FIGURES**• 91% of ARAUCO's assets are certified.

#### $\rightarrow$ ARAUCO at COP16 on Biodiversity

Between October 21 and November 1, 2024, the 16th edition of the world's most important biodiversity summit was held in Cali, Colombia: United Nations COP Convention on Biological Diversity (CBD). Once again, ARAUCO was present. Juan Andrés Anzieta, manager of Forests and Sustainability, and Pablo Ramírez de Arellano, senior researcher of Ecosystem Management, represented the company on ten panels of experts and leaders, where solutions were discussed and experiences shared on the challenges facing biodiversity. Among other matters, ARAUCO disclosed for the first time the results of the measurement of the natural capital of its biological assets in Chile.

On November 13, at ARAUCO's offices in Santiago, Chile, the event "Biodiversity on the corporate radar: Lessons learned from COP16" was held to show the results of the summit. The event was attended by spokespersons from the Global Reporting Initiative (GRI), Acción Empresas and sustainability specialists.

#### $\rightarrow$ Nature Positive, the new ambition of ARAUCO

To be "nature positive" is a global objective being pushed by the Nature Positive Initiative (NPI). an alliance of conservation

organizations, research centers and companies that proposes to halt and reverse the loss of nature by 2030 and achieve full recovery by 2050. The goal calls for going beyond minimizing environmental damage in order to have a positive impact that achieves real and measurable improvements.

ARAUCO set out to be a nature-positive company as part of its strategy and is already taking steps in that direction. In 2023, the Wildlife Conservation Society (WCS) conducted a comprehensive diagnosis for the conservation of biodi- versity in ARAUCO's Chilean assets. This resulted in the updating of its Biodiversity and Ecosystem Services Policy and the creation of a Climate Change Policy. In 2024 ARAUCO deployed a process of internal communication of these guidelines in Chile and the other countries where it is present.

ARAUCO's potential to contribute to the recovery of nature is high, both because of the characteristics of its operations - including carbon capture, aquifer recharge, species transit, among other factors - and because of the lower contribution of emissions and waste associated with the use of its products.

## Asset protection and fire prevention

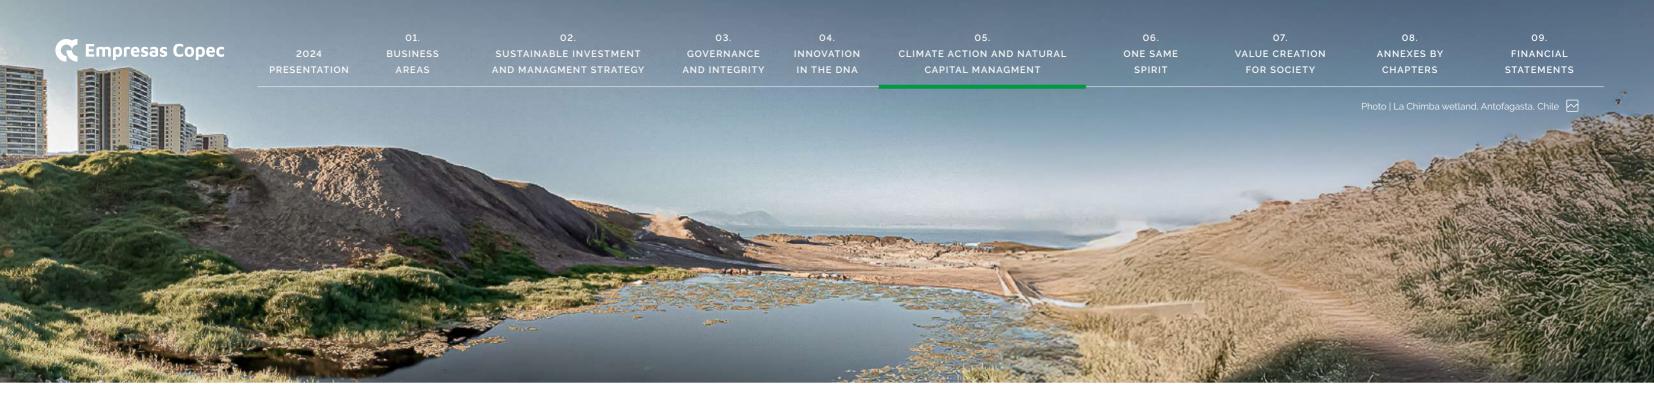

08. ANNEXES BY CHAPTERS

The decrease in precipitation and the increase in ambient temperatures caused by climate change, together with the actions of third parties, have led to an increase in forest fires. However, the number and extent of fires affecting ARAUCO's plantations in Chile during the 2023-2024 season were lower than in previous years. This is largely due to the measures taken by the company.

The subsidiary invested US\$ 72 million last year to intensify fire prevention, detection and firefighting. This included the deployment of 883 ground brigades, 80 trucks, two bulldozers, 36 surveillance towers, ten mechanized brigades and 16 helicopter brigades. In addition, two high-end helicopters returned and several innovations were developed, such as the implementation of 122 intelligent cameras that alert parkrangers in the event of unusual activities in the monitored areas. In addition, Wood Tracking, a mobile application similar to Waze, was created to identify inner roads in rural areas, their traffic conditions and show in real time the resources deployed in the event of fires.

This set of actions is part of ARAUCO's NO+ Fires program, a comprehensive prevention and control strategy focused on urban-rural interface areas (where 42% of fires occur) through three pillars: education and dissemination, fuel management and coordinated reaction with other public and private organizations.

#### **Energy sector** 4

Copec works on biodiversity conservation with a focus on ecosystems near its operations and has the goal of having a positive impact on 39 of these points by 2034.

In 2018, it started a strategic alliance with the Kennedy Foundation to recover the La Chimba wetland, Antofagasta Region and, in 2020, for the recovery of El Bato, in Quintero, Valparaíso Region. Thanks to these efforts, important milestones have been reached, such as the declaration of La Chimba as a nature sanctuary and urban wetland in 2020. A report released in 2024 revealed that its surface area has increased by 48% since work began, while the El Bato wetland has grown by 17%. Meanwhile, the species observed at La Chimba increased from 47 to 164 between 2021 and 2023, and in El Bato, the species richness recorded has increased by 70, reaching 89 in 2024.

As part of the commemoration of World Wetlands Day, celebrated in February 2024, Copec received recognition from the Municipality of Coquimbo for its participation as a strategic partner of the municipal environmental governance roundtable, an instance that seeks to preserve water and biodiversity reserves, such as the El Culebrón wetland. Copec also deploys work and diagnostic plans in Vientos del Chelenko (Aysén), Ojo de Opache (Antofagasta) and Tres Puentes (Magallanes) wetlands, the Chimbarongo estuary (O'Higgins), Huasco river (Atacama) and the Quebrada de Córdoba nature sanctuary (Valparaíso), among other ecosystems.

#### $\rightarrow$ Chiletur Copec boosts tourism in national parks and protected areas

In addition, new on-site technologies were incorporated, such as self-service totems, portable sales devices (POS) and ticket verification equipment (PDA) in parks with a high flow of visitors. By making it easier for visitors to enter, these tools also allow to relieve park rangers of administrative tasks so that they can focus on the conservation of the territories. Chiletur's initiative includes the dissemination of content about the protected areas through screens in service stations and Pronto stores.

Copec's subsidiary dedicated to the tourism sector won the bid for the sale of tickets for the National System of Protected Areas (SNAP) in 2024. To streamline and enhance access to national parks and reserves, a new website was implemented with an English version and the option to purchase tickets for large groups. Visits to the site increased by about 40% over the previous year.

## Food sector

Nutrisco Seafood promotes responsible fishing, which implies not only compliance with regulations, but also constant innovation to achieve the best environmental standards. As a result of this policy, Nutrisco's jack mackerel is 100% renewable. It also has several international certifications, such as Marine Stewardship Council (MSC), which ensures that jack mackerel fishing is carried out under strict quality standards and the sustainability standards set by the Food and Agriculture Organization of the United Nations (FAO).

# Compromiso

El compromiso es la fuerza que nos impulsa a cumplir con nuestras promesas y a actuar en coherencia con nuestros valores. Es la dedicación a un propósito que trasciende las motivaciones individuales, priorizando el bienestar común. Ser comprometidos significa perseverar frente a los desafíos con determinación y resiliencia. El compromiso se refleja en nuestras acciones cotidianas, en la manera en que enfrentamos los retos y en cómo contribuimos activamente a crear un impacto positivo. Es fundamental para alcanzar metas compartidas y el motor para construir un futuro más esperanzador y sostenible.

COMPANY	GOVERNANCE	GENDER EQUITY INITIATIVES	INCLUSION INI
Copec	The subsidiary considers diversity as a value that should be promoted to encourage innovation and creativity at work. For this reason, it developed its Diversity and Inclusion Policy, which aims to provide general guidelines to be followed by all employees in their daily work and operations in order to build a diverse and inclusive culture. In addition, it provides guidelines to be followed by employees in their relations with suppliers, distributors, contractors, concessionaires and consignees.	In recent years Copec has developed several actions to ensure gender equity, such as unbiased selection, labor flexibility initiatives, salary policies and learning programs that enhance female leadership. In the last five years, the subsidiary has increased the percentage of women in its staff from 29% to 34%. In addition, it promotes female leadership, with actions such as a mentoring program that in 2024 covered 35 leading female Copec employees, who were able to participate in three mentoring sessions and two workshops accompanied by the WoomUp organization. The objective is to provide them with career development tools to improve their experience in the subsidiary. → Women in Operation Meeting In 2024, this meeting brought together 30 women working in plant operations to promote collaborative networks and facilitate dialogue on how to promote diversity at all organizational levels. For this initiative, the subsidiary was awarded with first place in the Diversity, Equity and Inclusion category at the Tank Storage Magazine awards, a British magazine specializing in fuel storage and energy transition. ## Food sector

The merger in 2024 of the main companies in the food sector into a single company, Nutrisco, imposes the challenge of identifying the particularities of each entity, together with the objectives and values in common for all and, with them, designing a shared vision of the future, which takes sustainable nutrition as a horizon to work for. Although all the units that make up the company already had guidelines or practices in matters of people development and safety, the baseline for building the foundations and defining future goals must match with the purpose to be built among all, a process that began to be executed in 2024 and will continue in 2025. In other words, the idea is to rescue the essence of the new business so that each person feels part of a common project.

Nutrisco's diversity is a characteristic of a company that brings together different sectors: from those who make up the crew of a ship to those who work in a freezing plant, as well as by

people who work in the fields and do agricultural work. Finding the common stamp is a complex challenge, but not an impossible one. Thus, together with the definition of a purpose, the practices in the different units are being reviewed, including their benefits, to adequately address the needs and differences of the teams and ensure that each person can develop themselves and guarantee their well-being, sharing a common purpose and objectives.

In 2024, the operating model was changed in terms of people, adopting different ways of working. On the other hand, the company continued promoting people's dignity, as required by Nutrisco's Code of Ethics, which rejects discriminatory attitudes and labor or sexual harassment, as well as the pressure exerted against the affected person to prevent him/her from making the pertinent complaints.

Alxar has a Code of Ethics and Conduct that promotes non-discrimination and respect for employees and all people who interact with the company.

Las Salinas has a Code of Ethics, updated in August 2024, which represents a guide containing the guidelines and principles that should lead the work of all those who are part of the organization. This includes commitments to the safety and health of people, the development of those who are part of the company, the establishment of permanent relationships, and transparent and honest communication, among others.

## Salary equity

The incomes and benefits of those who work at Empresas Copec and its subsidiaries are defined taking into account market remuneration. All salaries exceed the national minimum in the countries where the Company and its subsidiaries operate.

Empresas Copec's Diversity, Inclusion and Respect for the Person Policy<sup>(1)</sup> establishes that the definition of work terms and conditions (such as tasks, training, remuneration, benefits, promotion, transfer and internal discipline) must be differentiated only by characteristics of the role and the qualifications required for a specific job or position, and not by other aspects that could be considered discriminatory or arbitrary.

208% of Chile's gross minimum salary (\$ 500,000 as of July 1, 2024) reached the minimum remuneration paid by Empresas Copec in 2024, without considering bonuses and other variables.

Given the diversity of industries in which the holding participates, the different companies calculate their salary gap on a caseby-case basis, disclosing their results in their respective annual reports. Additionally, each subsidiary reviews its compensation structure once a year, seeking to adapt income levels to the dynamics of the labor market in each country and considering the development opportunities of people in relation to their performance.

for the sustainable development of its activities.

#### $\rightarrow$ Together for a better life

SAFETY

This corporate management model, which is implemented in all countries where the company operates, is based on three principles: empowered workers, safe teams, and a job well done. The program develops complementary practices that foster cultural changes, correct behaviors, generate learning and promote the role of team leaders in safety matters. It also contains four commitments and 16 work areas to organize daily tasks so that teams take an active role in caring for their integrity.

On the other hand, the subsidiary continues to reinforce measures that have proven to be effective, such as Safe Team and ABC corporate practices (daily self-assessment of actions taken to correct unsafe behaviors or conditions), 123 (three steps that are activated when a high potential incident occurs), the 5 Key Rules and visible leadership. Two types of surveillance are applied at all ARAUCO facilities: environmental, including the identification, evaluation and control of risks to which employees may be exposed; and medical, whose purpose is to prevent or detect a disease in the subclinical or pre-symptomatic phase, in order to take the appropriate measures to reverse or delay its progress. Workers with a certain level of risk are medically evaluated to determine whether their health is suitable for their position and are then monitored periodically. To facilitate access to medical care, there are first aid or clinic facilities at all ARAUCO locations, staffed by properly trained health personnel.

In addition, the Company carries out different initiatives focused on health care, such as programs for hearing conservation, respiratory protection, ergonomics and rehydration, where employees are routinely trained on the risks to which they are exposed and the use of personal protective equipment. ARAUCO also has general health insurance for its teams and vaccination campaigns, as defined by the health authorities.

#### GOALS AND RESULTS

#### $\rightarrow$ Goal:

- To be a leading company in security.
- $\rightarrow$  Results:
- The accident rate was 0.47 in 2024, which represents a reduction of 9.4% compared to 2023.

## Food sector

\* Other investments

Nutrisco's occupational health and safety management aims to move forward in a preventive culture. To achieve this, work is carried out based on three pillars: occupational health and safety management system; technical reliability; and human and organizational factors.

With the merger, the safety policy and the monitoring of indicators were extended to all the entities that previously made up the holding company, achieving consolidated figures and the exchange of initiatives. The company is also working on the characterization of the staff and on a diagnosis with a view to implementing good practices and, eventually, certification in these matters. Alxar's organizational culture has people at its core. In this way, the company promotes initiatives aimed at the comprehensive development of its employees and to promote self-care in each collaborator. The company's Occupational Health and Safety Policy is based on six pillars: leadership; emphasis on people; permanent alertness; management based on proactive and transparent communication; adequate infrastructure; and safety culture.

In 2024, Mina Justa in Peru showed good results in occupational health and safety, exceeding those of large mining conglomerates, placing it among the top five copper operations worldwide in this area.

he "One ARAUCO" culaders to engage with he company's values, order to develop an ed and committed to

All of ARAUCO's employees receive benefits such as health, accident and life insurance, time off, food, shuttle buses to industrial plants far from urban centers, and loans. There are also scholarship programs for co-workers and their children. In Chile, the company also supports the financing of the purchase of a first home or the repair of one's own home for 5% of the workforce per year.

## Energy sector

COMPANY TALENT ATTRACTION

SKILLS DEVELOPMENT

#### Copec

The company is well-known as an attractive place to work, as indicated by several employability rankings and a low turnover rate, because it has always put people at the center. In addition, it has been able to transfer to the teams the conviction that Copec is indispensable for the development and mobility of the country, which it complements with a work environment characterized by permanent innovation and a challenging distribution of responsibilities.

In order to attract and incorporate the best talent required for its transformation process, it participates in university fairs and networking activities, both on-site and online.

One of the current focuses of the subsidiary's work is organizational adaptability, a necessary attribute to face the increasingly demanding requirements of the market, as well as the irruption of new technologies and competitors. For this reason, it is essential to have well-cohesive, enthusiastic teams with a sense of purpose and a willingness to change.

In this contex, Copec's Training Policy promotes a culture of learning and knowledge management that is a competitive advantage for the professional development of its employees. To this end, it offers a series of training programs organized into three pillars:

- Training in specific knowledge: mandatory courses associated with the position and role of the workers.
- Regulatory training: cross-cutting and mandatory, with the goal of complying with corporate policies, the company's cultural model and operational regulatory knowledge.
- Complementary training and development of employability: aims at training the employee beyond his or her role, through scholarships.

#### CULTURE AND WORK ENVIRONMENT

Copec's organizational culture is strongly linked to its purpose and its good brand reputation. Today, the company faces the challenge not only to continue strengthening this culture, but also to transfer it to the new generations and teams that have joined the subsidiary through the latest acquisitions.

#### $\rightarrow$ YOUR Copec Recognition

This program encourages peer-to-peer recognition. One of its milestones is the presentation of awards during the company's anniversary, where individuals and teams that have made high-impact contributions to the business are celebrated.

 $\rightarrow$  Copec PRO Leaders Program

Its objective is to stamp an adequate leadership seal to face current and future challenges, generating benefits in people, teams, projects and results.

#### $\rightarrow$ Work environment

The main indicator to know the opinion of its employees is the Work Climate and Satisfaction Survey, which is applied annually to draw up action plans to strengthen key organizational aspects.

#### SKILLS DEVELOPMENT

#### CULTURE AND WORK ENVIRONMENT

#### . . . . . . . . . . . Abastible

Attracting and developing talent is an essential practice within Abastible's people management. Business continuity is based on the capacity and commitment of its staff, together with the distributor network. Therefore, in order to move forward to the next level of service, it needs teams with innovative and efficient leadership.

The Talent Center of Excellence is responsible for

planning and implementing professional development plans. In terms of attracting talent, Abastible continues to in the top positions in the measurements carried out in Chile and other countries where its subsidiaries have presence. This position has been strengthened thanks to the existence of a purpose that translates into tangible measures to help the development of a group of crucial players for the country's progress, such as SMEs.

The company's training offer covers different dimensions aimed at continuous improvement. To align them with the new corporate purpose, in 2023 we redefined job competencies and redesigned training plans, which continued to be offered in 2024. Some of the programs are:

- Our Orange Culture: delivers critical business knowledge and corporate values.
- Facilitators Program: strengthens the skills of learning facilitators within the company.
- Abastible Potential: increases the skills of young collaborators and those with growth potential.
- Impulso: Aimed at administrative and technical positions with development potential within the company.
- Digitalization: training in the basic use of computer tools.

Abastible's purpose, "to empower the entrepreneurial spirit", invites to act collectively under a common identity resulting from a change management process that began in 2023 and is still ongoing. In this sense, communication is the natural bridge for employees to complete the transformation that

the company requires for the challenge of supporting the work of SMEs in Chile.

#### $\rightarrow$ Work environment

Until 2023, Abastible measured its work climate once a year, with high participation and satisfaction around 90%. As of 2024, it applied a change in the measurement, to move to a methodology focused on the levels of commitment shown by employees in relation to the company.

#### BENEFITS

Abastible continued to apply the "wellbeing" concept, with a comprehensive approach that promotes the physical, emotional and psychological wellbeing of its employees through the Gallup wellbeing model. In this context, its benefits program covers multiple areas:

- Healthy living: influenza vaccination, supplementary insurance,
- oncologic and dental agreement, etc.
- Family: marriage, death and childbirth allowances, parental leave for birth or adoption, school awards for children, etc.
- Flexibility: gradual reinstatement from postnatal leave, leave for children's health care, extension of postnatal leave for fathers, etc.
- Training: scholarships and agreements to learn languages.
- Financial welfare: loans, years of service awards, voluntary retirement compensation, discount agreements, etc.

#### $\rightarrow$ Empresas Copec and its subsidiaries among the most attractive companies to work for in 2024

- For the second consecutive year, Empresas Copec ranked second in the corporate holding category of the Merco Talento Chile ranking and 45th overall, out of a total of 200 companies.
- ARAUCO reached first place in the forestry category and and climbed to 31st place in the overall ranking.
- Copec remained in first place in the energy and distribution sector, and climbed to tenth place in the overall ranking, entering the Top 10 of the most attractive companies to work for in Chile.
- Abastible ranked third in the energy and distribution sector for the second year, and 43 overall.
- Terpel, a subsidiary of Copec, was recognized with the Gallup Exceptional Workplace Award 2024 as one of the five best companies to work for in Colombia.

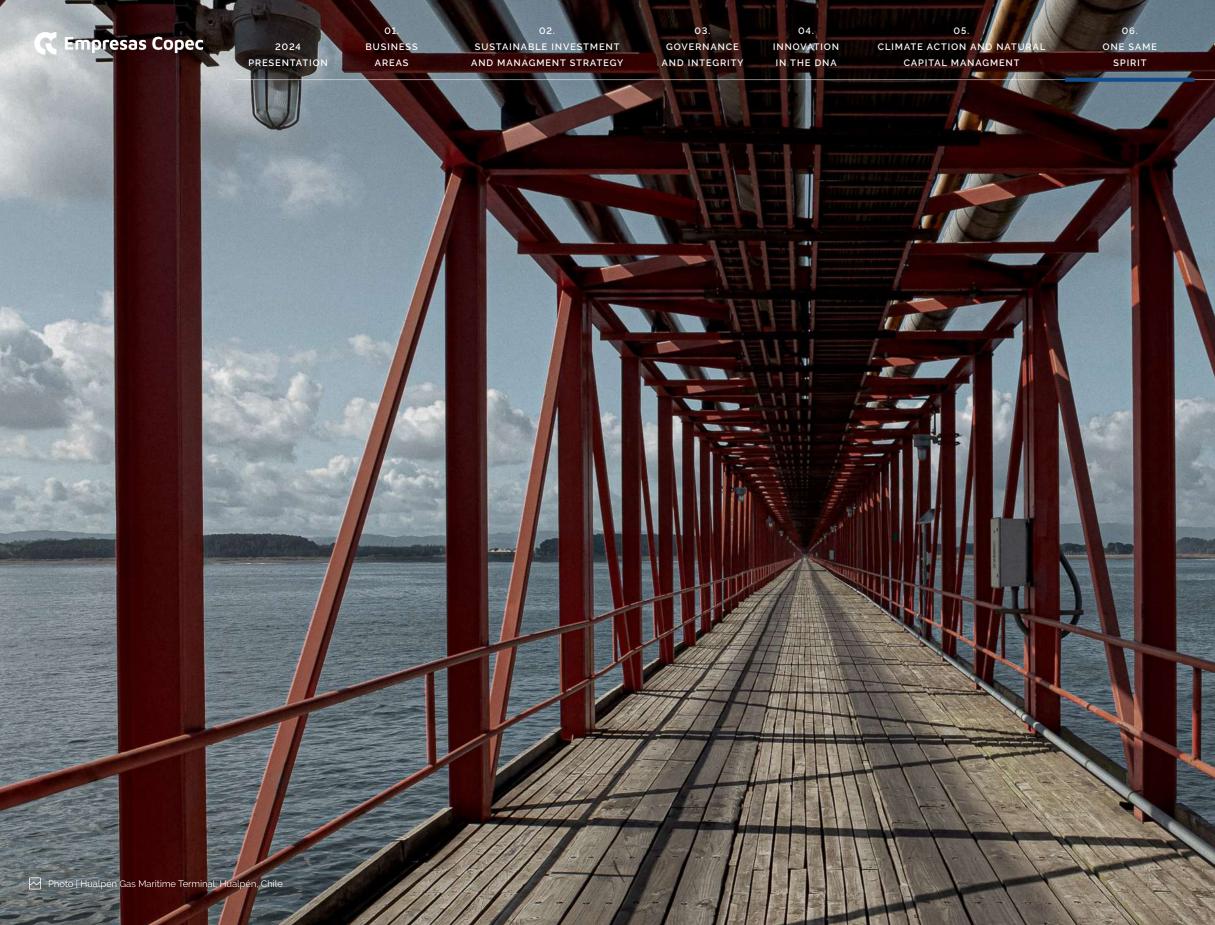

#### $\rightarrow$ New management at Nutrisco

As part of the reorganization that Nutrisco underwent in 2024, becoming a single company with different business units, this subsidiary created two new divisions: People and Sustainability. Thus, it will be able to become an organization that, while respecting the particularities of the different businesses, aims at common standards of quality and service, with teams committed to sustainable nutrition and the objectives established for the group of entities for its customers and stakeholders.

diversity and inclusion.

In 2025, Nutrisco seeks to advance in the analysis of information from the units to identify gaps and define objectives in relation to issues such as equity,

# Welfare

Welfare is the essence of a prosperous and balanced society. More than a goal, it is an ongoing process that requires a sustained commitment to face the challenges of today and build a hopeful future. At Empresas Copec, we understand welfare as a collective responsibility that drives every decision and action. Promoting it implies fostering the comprehensive development of people, communities and the environment in which we live. It means being aware that only through tangible actions can we counteract current threats and forecast prosperity for future generations. This commitment drives us to generate a positive impact that transcends, seeking that each action contributes to social welfare today and tomorrow.

## Whistleblower channel NCG 461 (8.1.1 / 8.1.2) 🛇

Empresas Copec has a communication channel, managed by an independent, confidential and anonymous third party<sup>(3)</sup> so that any person who has information about violations of Law N° 20,393 and its amending laws can report them directly to the Company's Offense Prevention Officer (OPO). Through this means, it is also possible to report conduct that deviates from the Code of Ethics, corporate values, the Human Rights Policy or the Diversity, Inclusion and Respect for People Policy, labor legislation and any other regulations in force.

The complaints may refer both to employees of Empresas Copec and to entities that maintain relations with it.

Once a complaint is received, the OPO must evaluate its merit and initiate an investigation as soon as possible, gathering all available background information. It then brings the situation to the attention of the Ethics and Compliance Committee, to agree on the next steps, in accordance with the Whistleblower and Consultation Channel Procedure<sup>(4)</sup>.

In addition, each subsidiary has its own channels to ensure fluid communication with the various stakeholders.

## ☆ Forestry sector

ARAUCO has a Human Rights Policy<sup>(6)</sup> whose foundations are also reflected in the Code of Ethics<sup>(7)</sup>. In addition, ARAUCO's own operations comply with applicable regulations and respect for the rights of indigenous peoples, workers and neighboring communities.

## Environmental and social risk analysis of forestry operations

The subsidiary uses a tool called Environmental and Social Risk Analysis (ARAS for its acronym in Spanish) to assess the environmental and social aspects associated with its forestry operations. This tool considers the general background of the operations and factors in the area of influence, such as communities and their related aspects (assets, sites of social interest, previous conflicts, etc.), public infrastructure, connectivity, easements and biodiversity, among others. Based on this information, the company determines measures to prevent or mitigate the im- and the control measures in its Integrated Management System.

280 community consultations in 2024

1.292 neighbors participating in 2024

pacts detected, establishes deadlines for its implementation and designates responsible parties.

If necessary, it also carries out community participation and consultation processes to communicate and reach consensus on preventive or corrective measures resulting from the operations.

The commitments associated with the ARAS are then monitored through the Environment and Communities unit, which reports to the Integrated Management Board on the progress and closure of these issues. With the information gathered, the company periodically updates its Aspects and Impacts Matrix

#### ARAUCO HAS DEFINED THAT THE FOLLOWING ACTIVITIES REQUIRE A MANDATORY ARAS:

In Coquimbo, Orizon Seafood is part of the Environmental Governance Board, led by the local municipality, which promotes collaboration between public and private institutions. environmental governance by the Ministry of the Environment.

Empresas Copec and its subsidiaries have policies and procedures aimed at granting fair and timely payment to its suppliers, in addition to guaranteeing that the criteria of usefulness, quality, timeliness and budget are favored in the selection processes.

To choose and contract suppliers, Empresas Copec uses technical, professional, economic and ethical criteria that are in line with the Company's needs. The selection procedures are objective and transparent, established prior to the process and demonstrable before higher authorities. Empresas Copec's supplier payment policy considers disbursements every 15 days once the invoice is approved, making no distinction between critical, national, international or SME suppliers.

The Company did not register agreements in the Register of Agreements with Exceptional Payment Periods kept by the Ministry of Economy.

Empresas Copec defines a supplier as critical according to parameters such as the value of purchases, its alternatives, handling of strategic or confidential information, regulatory and legal requirements, operational contingency and effects on the process, support for corporate strategy and reputational and economic impacts. Likewise, the specific risks inherent to the geographical location of the companies are taken into account, i.e. the most relevant local issues in each country and region. The particularities of each productive sector are also considered.

ARAUCO evaluates its suppliers to establish whether there are associated sustainability risks, which it categorizes as high, medium or low. Based on this evaluation, monthly actions are generated for each one. Procurement practices are continually reviewed to ensure alignment with supplier integrity expectations and to avoid potential conflicts with ESG requirements.

Copec has a supplier evaluation policy that considers sustainability, innovation and industrial safety parameters, among others. The results of these evaluations are used to generate action or corrective plans for those with opportunities for improvement. RELEVANT FIGURES• 15 days was the average payment period to domestic suppliers of Empresas Copec S.A. in 2024, four days less than in 2023.

- 5.4% of the total number of suppliers defined as critical in 2024, unchanged from the previous year.
- 67.4% of total procurement payments to critical suppliers in 2024, 0.4 percentage points more than in 2023.

COMPANY	GOVERNANCE	EVALUATION	PAYMENTS
ARAUCO	ARAUCO's payment expectations consider compliance with the deadlines stipulated by the legislation of each country where it operates. The company also defines critical suppliers as all those that are classified as strategic and, therefore, have an impact on the operations of the industrial plants. On its website there is a special section for suppliers in Chile <sup>(12)</sup> . where information is provided regarding the subsidiary's integrity expectations. This platform also seeks to make suppliers aware of and align themselves with the policy and procedures that concern them. Suppliers with permanent contracts must also comply with clauses referring to compliance standards and other relevant regulations.	Suppliers are evaluated according to their level. Critical suppli- ers are financially reviewed once a year. Meanwhile, all assets associated with the service contract areas undergo a monthly risk assessment, where mainly their debt level is reviewed. These processes allow us to define whether they have sustainability risk, which can be high, medium or low. Actions are monthly gener- ated for each supplier according to the classification obtained.	In Chile, Law 21,131 regulates payment to suppliers within days from the date of receipt of the invoice. ARAUCO pays documents before this deadline in the case of domestic su ers. For foreign suppliers, payments are made on the due of agreed in each purchase order. Similarly, there are payment cycles for critical suppliers in the areas: Forestry Business, Timber and Pulp Business Carriers, Chemical Suppliers. For them, the term is less than 15 days f the date of receipt of the invoice at the Internal Revenue Ser

# Energy sector

COMPANY	GOVERNANCE	EVALUATION	PAYMENTS
Copec	The subsidiary set out to develop ties with its suppliers to ensure operational continuity while encouraging them to adhere to the company's ethical, health and safety standards. Its Supplier Policy includes the annex "Sustainability Commitment", which is part of all supply contracts. The company defines its critical suppliers in accordance with the purchasing volumes and their substitutability or relevance to the business. There is a Supplier Portal <sup>(13)</sup> , where suppliers can find applicable corporate policies and news of interest to them.	Copec has a Supplier Evaluation Policy that considers the trajectory of the companies, their management in sustainability and innovation, and technical, logistical, service, industrial safety and quality management criteria. It also includes variables such as price, compliance with deadlines, technical and financial evaluation.	The subsidiary pays its SME suppliers within a m of 15 days from receipt of the invoice, as part of mitment to this segment. For exceptional cases, fee-based suppliers or those exclusive to the cor maximum of seven days has been established.
Abastible	Suppliers are an essential part of Abastible's value chain, especially SMEs, since they represent 74% of domestic suppliers. For this reason, the subsidiary is committed to encouraging their development, true to its purpose of promoting the entrepreneurial spirit. Its processes in this area include criteria and procedures that favor and encour- age the hiring of SMEs (Pyme Primero). To ensure the development of contractors, more than 70 installers were evalu- ated and certified, ensuring knowledge and expertise in their work. In addition, Abastible took out an OCIP (Owner Controlled Insurance Program) insurance policy to cover the risks inherent to its activities. In addition, there is a dispute resolution system structured in two stages. The first is internal and is carried out within the company through a commission made up of representatives of the different areas involved in the relationship with SME suppliers. If a solution is not reached at this stage, the conflict is taken to the second stage, in which an external and independent body mediates to achieve the resolution of the case.	Each tender includes a technical evaluation that incorporates environmental criteria and compliance levels; a social evaluation, which establishes adherence to safety standards and the protection of workers' rights; and other relevant aspects related to employee care, in order to promote responsible behavior throughout the supply chain. In addition, the subsidiary has a process to manage the risks of its critical supply chain: the requirements program is subject to strict monitoring that allows the necessary adjustments to be made to the commercial projection, the supplier delivery plan and the stock in warehouses. This makes it possible to anticipate possible stock-outs and develop action plans.	Abastible's payment policy specifies different te pending on the type of supplier. To strengthen tionship with SMEs, since 2023 it has implement 7-Day Payment program. In 2024, more than 94% of invoices issued by SM paid in an average of 5.2 days, benefiting 2,266 con During the year, improvements to the program were to enable a payment term of seven days from the of the good or completion of the service and not issuance of the invoice. This new term will be imple gradually during the year 2025.

## Contractors

At the individual level, Empresas Copec does not work with contractors.

However, this is a relevant stakeholder for its subsidiaries.

In Chile, ARAUCO, Copec, Abastible and Nutrisco carry out monthly monitoring of contractors' compliance with their labor obligations, paying special attention to their internal standards, such as protocols, norms and certifications. They are also invited to participate in training and awareness-raising events on health, safety, environmental management and regulatory compliance. **5.278** contractors in subsidiaries at the end of 2024

#### *Empresas Copec is c ommitted to education in Chile*

#### **Belen Educa Foundation**

Empresas Copec and its subsidiaries contribute financial resources and participate in the projects promoted by this institution, which manages 12 educational institutions in vulnerable sectors of Santiago and La Unión (Los Ríos Region), reaching more than 15 thousand students.

In 2024, among other activities, ten executives of the Group gave professional lectures at the Archbishop Manuel Vicuña school in San Joaquín, La Legua, where they motivated students from seventh grade to fourth grade. In addition to this, there is the Tutoring Program, an instance developed to guide fourth-grade students in their professional development, and where executives of the Company and its subsidiaries meet monthly with students to guide and accompany them in their educational careers.

The Anacleto Angelini Fabbri academic excellence scholarships were also awarded to eight students who graduated from the foundation's schools. This benefit provides resources for annual maintenance and support for higher education studies. Since 2006, more than 130 young people have received the scholarship.

# enseñachile

The Company and its subsidiaries have been partners of Enseña Chile Foundation for 15 years. This Chilean institution is responsible for selecting and training young professionals who wish to dedicate their first working years to teaching in vulnerable schools, in order to build a network of agents of change capable of impacting the educational system.

f impacting t s part of this

As part of this alliance, a group of Company employees is participating in the Volunteers Project, an initiative that seeks to reduce the academic gap of students in schools with a high vulnerability index.

# Education

#### **FORESTRY SECTOR**

#### $\rightarrow$ ARAUCO Educational Foundation

This institution, which celebrated its 35th anniversary in 2024, focuses on improving learning processes in public education through professional development and educational improvement programs for teachers, community leaders, management teams, funders and local authorities. Throughout its history, it has positively impacted 500 educational establishments in 34 municipalities and more than 120,000 students.

In 2024, the Foundation joined the Sumar Saberes alliance, promoted by the Ministry of Education and Fundación Chile, which aims to identify and promote successful initiatives that can be scaled up in the country.

It also made available to all educational establishments in Chile the Dominio Lector resources, free tools to evaluate the oral reading fluency and speed of students from first to eighth grade.

#### $\rightarrow$ Schools of excellence

Since 1981, ARAUCO has founded three schools: Arauco, Constitución and Cholquán where more than 1,200 students are educated each year. The academic achievements of these schools are recognized nationally. In 2024, the Constitución and Arauco schools stood out for the performance of their graduates in the Higher Education Access Test (PAES).

#### $\rightarrow$ ARAUCO Campus

Through an alliance between the company and DUOC UC, an institute was created eight years ago in the municipality of Arauco, whose objective is to strengthen technical-professional education in line with the productive vocation of the region.

#### $\rightarrow$ Renewal of mobile library vehicles

To promote reading, in 2024 ARAUCO renewed the fleet of the Bibliomóviles program, which operates in the municipalities of Cañete, Lebu and Los Álamos in the Biobio Region. Its objective is to provide book lending services to schools and rural communities where there are no public libraries. In addition, 900 books were added to the mobile library catalog.

#### ✤ ENERGY SECTOR

#### $\rightarrow$ Copec's Viva Leer Program

In addition, the program considers the sale of a collection of quality, low-priced books at service stations and on the website.

This initiative has been encouraging reading for 13 years

through the construction of libraries open to the community

in municipal and semi-private schools. Each year, through a

contest, Copec selects 15 schools to benefit them not only

with new libraries, but also with a collection of more than 2,000 books and software to manage loans. In 2024, it added

an exclusive competition to implement reading spaces in

smaller rural schools. To date, around 140 libraries and 25

reading spaces have been installed throughout the country.

 $\rightarrow$  Terpel Foundation This 20-year-old institution works to improve the quality of education in Colombia and Panama by developing basic competencies in leadership, mathematics and language in vulnerable children and young people. In 2024 it signed a memorandum of understanding with the Colombian Ministry of Education, which seeks to assist in the implementation of innovative pedagogical strategies.

# Quality of life

#### ♣ FORESTRY SECTOR

#### ightarrow Water Challenge (Chile)

For more than a decade, this ARAUCO program has been supporting 51,000 people through 116 rural drinking water projects (APR) in 42 municipalities. This has been possible thanks to the delivery of studies, engineering and land for the development of the works, through a public-private partnership model. The project includes, on the one hand, the implementation of methods to measure water parameters in forest watersheds and, on the other, the Monitors initiative, which trains neighbors in water and soil resource management. More than 380 projects in 22 municipalities have received this training.

In 2024, the Sustainability Ranking prepared by Brinca and Universidad Adolfo Ibáñez Business School selected ARAUCO as one of the winning institutions in the environmental category for Water Challenge.

#### ightarrow Habitability and Territory Program

Promotes high quality housing solutions for the company's workers, contractors and neighboring communities, together with public and private organizations.

#### ightarrow Open Forest

ARAUCO gives communities access to its forestry assets so that they can enjoy the environmental, social and cultural values that forests offer.

#### ightarrow Food Network (Chile)

Since 2010, this network has been working to rescue food and staple products fit for human consumption, which it then distributes to the neediest people, thereby also helping to prevent waste.

As part of their social commitment, ARAUCO, Abastible, Arcoprime and Nutrisco support this cause with resources or products that would otherwise be discarded. In this way, they contribute to a sustainable model that benefits both the community and the environment.

#### ENERGY SECTOR

#### ightarrow Accelerate your ideas

In 2024 Copec launched its first competitive fund for community and territorial organizations, specifically those that develop activities that benefit the communities of Mejillones, Caldera, Coquimbo, Quintero and Calbuco. The fund finances projects of social, productive, cultural, sports, environmental and community safety impact that respond to the needs identified by the neighbors themselves. A total of 75 million pesos were allocated. The selection process was carried out through a technical evaluation based on criteria such as relevance, internal coherence, coverage and sustainability.

#### ightarrow Emergency Support

In 2024, Copec and Arcoprime were present during the fire emergency in the Valparaiso Region, by donating \$70 million to Red de Alimentos. This institution made it possible to deliver basic necessities to the inhabitants of the affected areas. In addition, they generated a help channel for customers and workers who wanted to make a direct economic contribution.

Copec also signed an agreement with the Chilean National Firemen's Board for efficient fuel delivery in emergencies.

Abastible also provided assistance to people affected by the fires in the Valparaíso Region, through the replacement of damaged cylinders, gas refueling and support to municipalities, groups and community kitchens. Donations totaled more than \$ 250 million.

#### ightarrow Agreement to benefit Chile's neighbors and households

During 2024, Abastible signed agreements with the Chilean Association of Municipalities and the municipalities of Santiago, Valparaiso and Viña del Mar to benefit the residents of these 99 municipalities with discounts of up to \$ 6,000 on purchases of 5 kg, 11 kg and 15 kg liquified gas loads. Residents can use up to two discounts per month. 07. VALUE CREATION FOR SOCIETY 08. ANNEXES BY CHAPTERS 09. FINANCIAL STATEMENT

08. ANNEXES BY CHAPTERS

#### ✤ ENERGY SECTOR

#### $\rightarrow$ Chiletur

Copec presented in 2024 the evolution of its traditional travel guide, Chiletur Copec, now transformed into an international standard platform for booking, planning and enjoying more than 500 tourist experiences throughout the country, from Arica to Puerto Williams, including Easter Island and the Juan Fernández archipelago. Chiletur also empowers tour operators, micro-entrepreneurs and local communities, enabling them to digitalize their offerings, certify their services and increase their reach. In this regard, Chiletur's development required extensive collaborative work with more than 300 national tourism operators, who were trained in digital content and in obtaining certification from the National Tourism Service. Chiletur now has more than one million active users, between the app and the web. By 2025 Copec plans to expand the platform to more than 1,000 operators.

#### $\rightarrow$ Move Your Dreams

With this program, Copec supports the growth of entrepreneurs, micro-enterprises and SMEs in the municipalities of Caldera, Coquimbo, Quintero and Calbuco, and five towns in Patagonia: Coyhaique, Puerto Aysén, Puerto Río Tranquilo, Puerto Chacabuco and Río Ibáñez, giving them the opportunity to learn and train in areas such as formalization, marketing, sales and finance. It is carried out with the support of UC's Anacleto Angelini Innovation Center, and offers mentoring through a hybrid learning model, with the delivery of financing to the finalists. The third version was launched in 2024. 569 SMEs have been trained.

#### ightarrow Mundo Verde MiPyme Program

Through its participation in this Banco Estado program, Copec Voltex supports SMEs in their energy transformation with consultancy and access to electromobility projects. The objective is to help small companies to materialize their transition projects.

#### ✤ ENERGY SECTOR

#### ightarrow Support for the MSME platform

Together with Multigremial Nacional and Kame ERP, Abastible delivered a free accounting system to all micro and small companies in the country.

#### $\rightarrow$ Abastible's agreement with the National Chamber of Commerce

This collaboration, signed in 2024, allows us to provide legal advice to our collaborating SMEs, in addition to facilitating their application to labor formalization programs.

#### $\rightarrow$ Somos Almacenes

In 2024 Abastible signed an alliance to join the Somos Almacenes (We are grocery stores) program of the Ministry of Economy, which aims to promote the growth of these SMEs. Specifically, the subsidiary will collaborate with the Barrios platform, which gives visibility to local businesses, and will provide special discounts to grocers on the purchase of liquified gas.

#### $\rightarrow$ Agreement for the benefit of bakeries

During the year, an agreement was also signed with the Chilean Federation of Industrial Bakers (Fechipan), so that the nearly 20,000 associated stores (85% of them SMEs) can access discounts on the purchase of liquified gas cylinders.

#### $\rightarrow$ Alliance with craft breweries of the Araucanía region

Under an alliance with the Association of Breweries of Costa Araucania signed in 2024, Abastible offers affiliated SMEs a better price on the purchase of liquified gas, a fuel that is widely used in the cooking of beer.

#### $\rightarrow$ Large SME Corporation

Together with other well-known local companies, Abastible worked during 2024 on the creation of a non-profit organization to finance, in a first stage, studies that will provide useful data and indicators for the design of policies and initiatives to help this key sector of the economy. The project envisages the creation of an observatory to develop studies and innovative solutions in areas such as financing, formalization, and growth.

**FOOD SECTOR** 

#### $\rightarrow$ Food Innovation Award

Together with Transforma Alimentos and Espacio Food & Service, Nutrisco awards this annual recognition to innovations in the food industry that stand out for their business potential, social impact and creativity. The winning projects receive financial support and mentoring for scaling up. The last award ceremony took place at the international food industry exhibition Espacio Food & Service, where Nutrisco also organized the seminars "Trends and consumer behavior" and "Sustainable innovation".

#### $\rightarrow$ Community plant for entrepreneurs in Coronel

In 2024 Nutrisco provided a ClinBox room on loan to a group of women from the Sindicato de Charqueadoras de Lo Rojas. It is fully equipped and has a sanitary resolution for processing smoked jack mackerel and crab meat.

Orizon, together with CeTA, the Technology Center for Food Innovation, inaugurated a new facility in the Biobío Region, within the company's plant, to improve the development of products based on local raw materials. The center has more than 230 m2 equipped with advanced machinery, laboratories, product development areas and production lines. This is the second CeTA facility developed by both entities. The first one is located in the Coquimbo Region and has been operating since 2020..

#### $\rightarrow$ Alliance with the Chilean Association of Gastronomy (Achiga)

The strategic partnership signed by Nutrisco and the gastronomic sector aims to materialize the commitment to promote healthier eating. Achiga brings together more than 4,000 points of sale throughout the country, including restaurants and suppliers.

## Relations with Indigenous Peoples

For ARAUCO, its relationship with the indigenous peoples of the territories where it operates is an opportunity to promote reciprocal knowledge, channels of participation and permanent dialogue. The goal is to build long-term, trusting relationships that open paths for mutual development.

Since 2012, ARAUCO has had a Mapuche Community Relations Policy<sup>(16)</sup>, which lays the foundations for its relationship with the Mapuche people based on five pillars:

#### ightarrow 1. Promoting knowledge and learning about ARAUCO

There are more than 160 people trained in the Intercultural Training. with the community of Lilcoco we are working on identifying and enabling a cultural trail.

#### ightarrow2. Maintain permanent dialogue and consultation processes

There are 426 Mapuche communities linked to ARAUCO. Since 2013, more than 280 consultations have been held and a mechanism has been created to encourage local Mapuche employment with more than 640 employees and contractors.

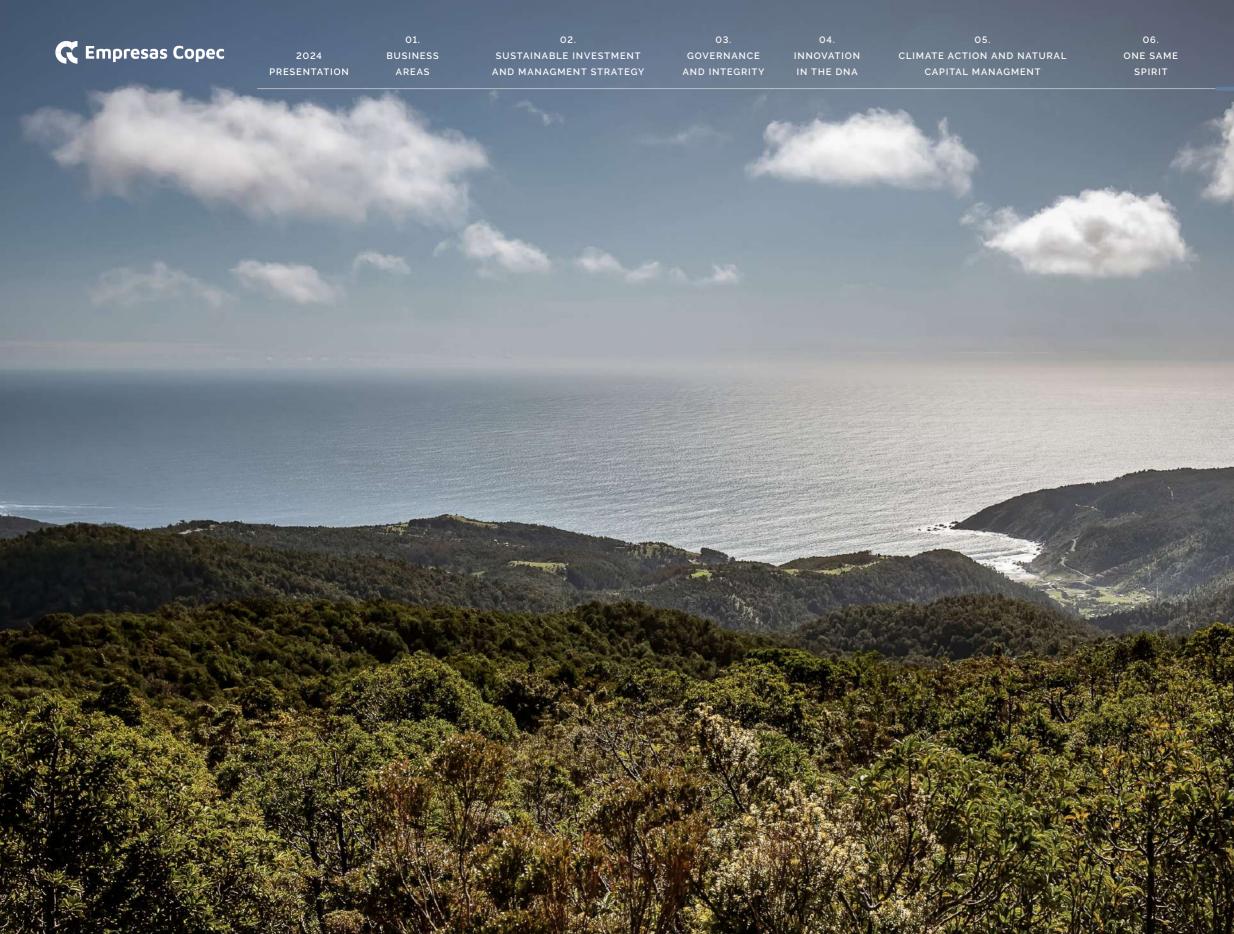

#### ightarrow 3.Identify sites of religious, cultural and economic interest

There are 42 areas of high cultural conservation value, which the company co-manages with the communities. In Lanco, together with the indigenous community of Hueima, the Hueima waterfall infrastructure is being assessed and habilitated, while In Loncoche, together with the Ñeicuan Curin community, a process began in 2024 to habilitate the community's ceremonial site (nguillatüwe), a process that will finish in 2025.

#### ightarrow 4. Know and manage land requirements

More than 5 thousand hectares have been transferred to communities through the National Corporation for Indigenous Development (Conadi) since 2014.

 $\rightarrow$  5. Seek dialogue practices and mechanisms for consultation, resolution and administration of disputes

# Annual Management Report of the Directors' Committee

NCG 461 (3.3.IV / 3.3.VI)

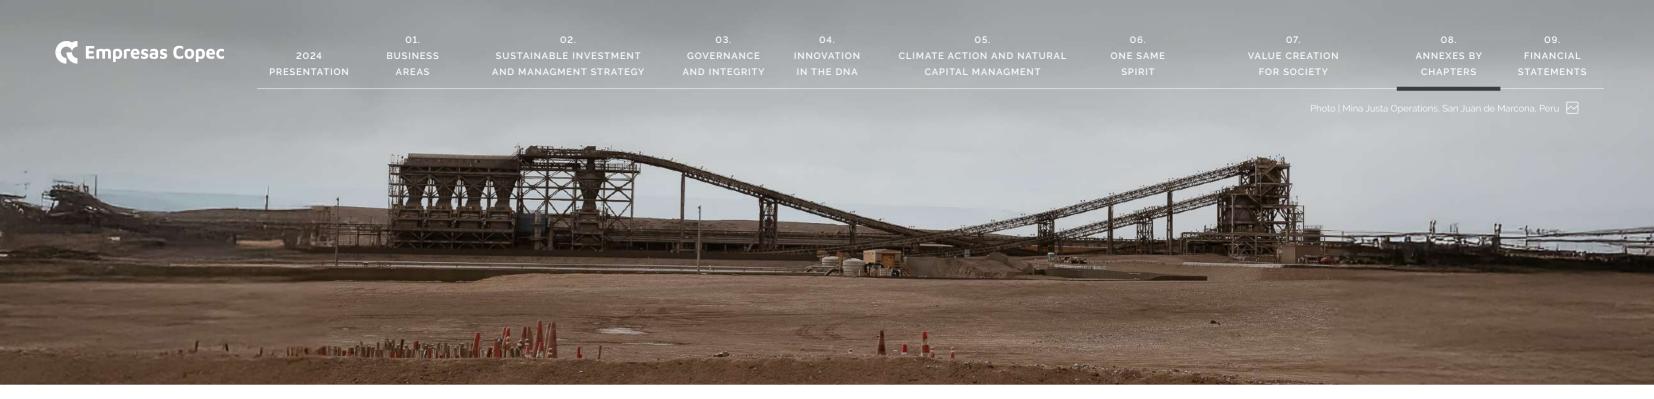

In accordance with Circular N° 1,956 of the Financial Market Commission, the Board of Directors nominated at its ordinary meeting of April 25, 2024 the persons who would be members of the Directors' Committee referred to in Article 50 bis of Law N° 18,046. The persons appointed on that occasion were Mrs. Marcela Achurra, Mrs. Karin Jürgensen and Mr. Juan Edgardo Goldenberg. It is worth mentioning that the former is an independent director, was appointed chairwoman of the Committee and is responsible for communicating the matters discussed to the Board of Directors of Empresas Copec S.A.

During the 2024 fiscal year, the Committee was dedicated to fulfilling its duties and exercising the powers established by law, which, among other matters, meant examining the reports submitted by the external auditors and the financial statements

submitted by the management, and make recommendations disclosed as material fact. In addition, the Company's Board regarding them; propose to the Board of Directors external of Directors specifically instructed the Directors' Committee to audit firms and risk raters; examine the remuneration systems review, in support of its work and on a non-resolutionary basis, the following matters: Internal Audit, Financial Investments and and compensation plans for managers, chief executives and collaborators; and finally, it examines the background informa- Risk Management. tion related to the transactions referred to in Title XVI of Law The Committee met nine times, with the attendance of the Chief Executive Officer, the secretary of the Committee and the this last point, it should be noted that the Committee analyzed the Chief Finance Officer or, in the absence of the latter, the general transactions referred to in this Title, verifying that the operations accountant or finance and investor relations director; and, when carried out are in accordance with market conditions and the appropriate, with PwC external auditors, KPMG internal auditors social interest. Likewise, the Committee proposed to the Board and Deloitte executives in charge of risk management. The main of Directors a Customary Transactions Policy in accordance with subjects reviewed in each session are listed below: Article 147 letter b) of Law N° 18,046 and the General Rule N° 501 of the Financial Market Commission, which was approved and

## Contributions to guilds and associations

BUSINESS

AREAS

Empresas Copec and its subsidiaries contribute to several initiatives in line with their business and context, in accordance with their internal policies. They also actively participate in associations and memberships, which are detailed on the following page.

### → GLOBAL COMPACT

SUSTAINABLE INVESTMENT

AND MANAGMENT STRATEGY

GOVERNANCE

AND INTEGRITY

INNOVATION

IN THE DNA

The Company joined the Global Compact in 2021, which ratifies its commitment to the UN's Ten Fundamental Principles of Sustainability and the Universal Declaration of Human Rights. In this way, Empresas Copec is committed to generating alliances that contribute to the fulfillment of the United Nations 2030 Agenda and its Sustainable Development Goals.

### $\rightarrow$ ACCIÓN EMPRESAS

Through a partnership with Acción Empresas, an organization that is part of the World Business Council for Sustainable Development (WBCSD), the Company is part of the pilot group of five sustainability criteria, a commitment signed in 2022 that seeks to make progress in: carbon neutrality; human rights-due diligence; inclusion-diversity; biodiversity; and transparency-reportability.

### $\rightarrow$ ICARE

By contributing to lcare, the Company seeks to have a meeting point for systematic reflection on business management and its present and future approach, providing management levels with relevant information on the national and international environment, facilitating the understanding and timely evaluation of the forces driving the markets and the trends that influence business operations.

CLIMATE ACTION AND NATURAL

## Analysis of main risk factors and management of subsidiaries

Through its subsidiaries and related companies, the Group has operations in different areas related to natural resources and energy. The relevant risk factors vary depending on the type of business. Accordingly, the management of each of the subsidiaries performs its own risk management, in collaboration with their respective operating units.

## General risks

### $\rightarrow$ Macroeconomic risks

Empresas Copec, through its subsidiaries, has operations in Chile these macroeconomic risks through its internationalization and other countries, such as Colombia, United States, Canada, process, having today has productive assets in 16 countries, Panama, Peru, Uruguay, Brazil, Argentina, Mexico, Ecuador and, commercial presence in 30 and sales in more than 80. through its related companies, in Germany, Spain, Portugal and ightarrow Changes in laws and regulations in the South Africa. A possible deterioration of economic conditions in operating sectors these countries, or in other countries where it sells its products, could adversely affect its financial and operating performance. Changes in laws and regulations in the industrial sectors in Likewise, fluctuations in the exchange rate, inflation, social instawhich Empresas Copec operates may affect the conditions bility, liquidity conditions for financing through debt or equity or under which the Company operates in such a way that they could have a negative effect on the business and, consequently, changes in tax rates and import and export tariffs, as well as other political, legal, regulatory and economic changes originating in on the Company's results. In addition, potential changes in tax those countries, could have a negative effect on the financial laws in the countries where the Company and its subsidiaries and operating results of Empresas Copec, its subsidiaries and operate could generate negative effects on the results.

# $\rightarrow$ Facilities located in Chile are exposed to the risk of earthquakes and possible tsunamis

Chile is located in seismic territory, which exposes plants, equipment and inventories to the risk of earthquakes and tsunamis. A potential earthquake or other catastrophe could severely damage facilities and impact estimated production and may not meet customer needs, resulting in unplanned capital expenditures or lower sales which could have a material adverse effect on the Company's financial results. The Company has taken into consideration the geographic conditions in the construction and modernization of its plants, in addition to having contingency plans in case any of these natural disasters occur. The subsidiaries have taken into consideration the geographic conditions in the construction and modernization of their plants, in addition to having contingency plans in case any of these natural disasters occur. In addition, they have insurance to protect part of the assets against these risks.

### $\rightarrow$ Climate change

A growing number of scientists, international organizations and regulators, among others, argue that global climate change has contributed, and will continue to contribute, to the unpredictability, frequency and severity of natural disasters (including, but not limited to, hurricanes, droughts, tornadoes, frost, storms and fires) in certain parts of the world. As a result, numerous legal and regulatory measures, as well as social initiatives, have been introduced in different parts of the world, in an effort to reduce greenhouse gas and other carbon emissions, which would be significant contributors to global climate change. In addition, public expectations regarding reductions in greenhouse gas emissions could result in increased energy, transportation and

raw material costs and may require the Company's subsidiaries to make additional investments in plant and equipment. Although we cannot predict the impact of eventually changing global climate conditions, nor can we predict the impact of legal, regulatory and social responses to concerns about global climate change, these occurrences could adversely affect the Company's business, financial condition, results of operations and cash flows.

Empresas Copec and its subsidiaries have strengthened their sustainability strategies, detecting potential risks and taking measures to mitigate the impact of these trends. In particular, Arauco contributes to the mitigation of this phenomenon as a carbon-absorbing company, which has been duly certified. In addition, it works on the investigation of several initiatives focused on reducing water consumption in its industrial operations and improving the adaptability of forests to climate change. Likewise, it has a Water Management Strategy based on the knowledge of basins and plantations, proper management of the resource, the contribution to neighboring communities and the development of communication and training actions. For its part, Copec has announced its climate change statements, establishing the goal of reaching carbon neutrality by 2030. In addition, by the end of 2021, the service stations were already carbon neutral.

### ightarrow Social and governance risks

It is important to avoid the possibility that there may not be sufficient social support for the different businesses in which Empresas Copec's subsidiaries operate. In this regard, Empresas Copec and its subsidiaries have spent decades developing strategies, promoting social initiatives, detecting potential risks and taking measures to mitigate the impact of these trends. On

the other hand, poor governance in a company could generate risks of poor decision making, non-compliance with regulations, deficient information or poor management of conflicts of interest, among others. Empresas Copec's governance is based on solid principles and robust systems, and is permanently reviewed to adjust it to best practices.

### ightarrow Logistical risks

During some periods in recent years, logistical risks have been arising in the form of lack of containers, greater spacing of shipments, port closures at destinations, among others. These risks are mitigated through a long-term relationship with logistics operators and medium and long-term contract structures for the export of its products.

### ightarrow Other risks

Since 2020, the COVID-19 virus has spread in the world population and caused significant social and market disruption. The impact of the virus has been declining and, as of today, is not significant. However, the effects to the global economy and to the Company of an eventual resurgence of this or any other pandemic scenario could include a variation in market prices for the products of some of the Empresas Copec's related companies, logistical complications, changes in demand, production restrictions, risks to the health and safety of employees, and variations in the prices of securities issued by the Group's companies, among other possible consequences.

Some international geopolitical events could have a significant impact on different aspects of the world economy. During these years, in particular, major military conflicts have developed in Eastern Europe and the Middle East. The consequences for the Company are still uncertain and are monitored, and will by sporadic demonstrations and violence. In response to this, processes were defined to draft a new political constitution, which
Some international geopolitical events could have a significant impact on different aspects of the world economy. During these years, in particular, major military conflicts have developed in Eastern Europe and the Middle East. The consequences for the Company are still uncertain and are monitored, and will be reported, if relevant. As a result, demand for some forest products has been relatively affected.

## $\rightarrow$ Evolution of the world economy, particularly the Asian and U.S. economies

The global economy, and in particular worldwide industrial production, is the main driver of demand for pulp, paper and timber products. A decline in the level of activity, whether in the local or international market, can affect demand and the selling price of ARAUCO's products and, consequently, its cash flow, operating and financial income. ARAUCO's business could be particularly affected if economic conditions in Asia and the United States change.

### $\rightarrow$ Pests and forest fires

ARAUCO's operations are exposed to pests that can affect the forests that supply raw materials, as well as to forest fires that can spread to manufacturing plants. The presence of both risks could produce significant negative impacts on ARAUCO's assets.

To address the threat of forest fires, ARAUCO has increasingly strengthened its preventive and firefighting measures, its relationship with communities, forest management and other measures, through several initiatives consolidated in the "Forests with a Future" program. In addition, it has insurance policy coverage.

### $\rightarrow$ Environment-related risks

ARAUCO is subject to environmental laws and regulations in the countries where it operates. These regulations refer, among other matters, to the elaboration of environmental impact assessments for projects; the protection of the environment and human health; the generation, storage, handling and disposal of waste: emissions into the air, soil and water: and the remediation of environmental damage, when applicable.

As a manufacturer of forest products, ARAUCO generates emissions of solid, liquid and gaseous elements. These emissions and waste generation are subject to limits or controls prescribed by legal standards or by its operating permits. Authorities may require increased legal requirements to control the environmental impacts of projects. ARAUCO has made, and plans to continue to make, disbursements to remain in compliance with environmental laws. Notwithstanding ARAUCO's policy of strictly complying with all requirements established by law, any eventual failure to comply with environmental laws and regulations could result in temporary or definitive suspension of activities, fines, penalties or the imposition of obligations. ARAUCO has strict internal environmental policies, with the objective of minimizing the impact of projects and operations on communities and the environment, partially mitigating the aforementioned risks.

Future changes in environmental laws or in their application, interpretation or enforcement, including stricter requirements

related to harvesting, emissions and climate change regulations may result in considerable increases in capital needs, operating costs and limited operations.

### $\rightarrow$ Temporary shutdown of any of ARAUCO's plants.

Most of the related companies in the forestry sector manage their accounting in U.S. dollars. However, they are subject to the A significant interruption in any of the production facilities in risk of losses from exchange rate fluctuations in cases where the forestry sector could result in ARAUCO not being able to assets and liabilities are denominated in currencies other than meet the demand of its customers, failing to meet its producthe functional currency. tion targets and/or requiring unplanned investments, which would result in lower sales and could have a negative effect With all other variables constant, a variation of +/- 10% in the exon its financial results. ARAUCO's facilities, in addition to being change rate (\$/US\$) would have meant a variation on the income exposed to earthquake and, in some parts, tsunami risks, may for the year after tax of +/- 0.8% (equivalent to +/- US\$4,027,000), unexpectedly stop operations due to a series of events such and of +/- 0.03% of shareholders' equity (equivalent to +/as: i) unscheduled maintenance shutdowns; ii) extended power US\$ 2,819,000). outages; iii) critical equipment failures; iv) fires, floods, hurricanes In relation to the economic risks derived from variations in the or other catastrophes; v) chemical spills or releases; vi) boiler interest rate, as of December 31, 2024, 10,4% of the bonds and explosion; vii) labor problems and social conflicts; viii) terrorism or loans with banks accrued interest at a variable rate. ## Energy sector

In the distribution of liquid fuels and liquified gas, the Company, In turn, fuels compete with alternative energy sources. In the case through its subsidiaries Copec and Abastible, holds a leading of liquified gas, the main substitutes are natural gas, firewood, position in the Chilean market. It also participates in Colombia, diesel and electricity. On the other hand, electromobility is a through its related companies Terpel and Colgas, and in Peru and Ecuador through Solgas and Duragas, Abastible's subsidiaries. limited scope for now in Chile and the region, which could affect In these countries, a significant part of the supply is obtained from local companies. However, there are conditions to access alternative fuel supply markets, a situation that allows to optieventually implemented by the countries in which the subsidiaries mize the supply and distribution of products to the public. It is operate. Copec is already investing in electromobility, with the possible that local and international markets may be affected by economic, geopolitical and other situations that make access to supply difficult.

The relevant risk for the fuel distribution business, and also for the liquified gas business, is essentially in the distribution margin, rather than in the price level of oil and its derivatives. The distribution margin depends mainly on the competition factors that take place in the markets on a daily basis. Since these are products with low price elasticity, eventual increases or decreases in the price of crude oil or in the exchange rate have relatively little effect on the volumes traded in the market.

Notwithstanding the above, the value of the company's inventory is impacted by variations in international fuel prices. The policy of the subsidiary Copec is not to hedge the permanent stock, since the increases and decreases taking place are compensated in the long term. This is not the case with occasional overstocks, where, given the market pricing methodology, no hedging instrument has been found to fully mitigate this risk.

- trend that has gained strength in many countries, with a more
- the liquid fuels distribution business and, therefore, impact the Company's results. This could be accelerated by public policies
- goal of positioning itself as a leader in this new market, through initiatives such building a network of electric charging stations and participating in electric bus terminals. Also, it is investing in start-ups related to energy, mobility and convenience, among other projects, and seeking alternative ways to monetize its assets, such as last-mile logistics or digital means of payment.
- The related companies in the fuel sector, which represent approximately 30% of the Company's total assets, manage their accounting in Chilean pesos, Colombian pesos and Peruvian soles, and both their financial assets and liabilities and most of
- their income are denominated in these currencies, so exposure to exchange rate variations is significantly reduced. However,
- in the parent company, variations in the exchange rate affect the valuation in dollars of both the investments in this sector and the results obtained. Empresas Copec partially mitigates this risk by hedging part of the results of Copec and Abastible through derivatives.

05. CLIMATE ACTION AND NATURAL CAPITAL MANAGMENT

### $\rightarrow$ Risks related to the environment

In Chile, the related companies in the energy sector are regulated by Law N° 18.410, which establishes the creation of the Superintendency of Electricity and Fuels with the purpose of supervising and overseeing compliance with legal and regulatory provisions and technical standards on generation, production, storage, transportation and distribution of liquid fuels, gas and electricity, to verify that the quality of the services provided to users is as indicated in such provisions and technical standards, and that the aforementioned operations and the use of energy resources do not pose a danger to persons or things. The above is in addition to Supreme Decree N° 160 of the Ministry of Economy, Development and Reconstruction on "Safety Regulations for Facilities and Operations of Production and Refining, Transportation, Storage, Distribution and Supply of Liquid Fuels."

Future changes in environmental laws or their application, interpretation or enforcement may result in significant increases in capital requirements, operating costs and limited operations.

The related companies in the energy sector have the main certifications in safety, occupational health and environmental management standards for the processes of sales, transportation, operation, storage and supply of fuels.

## ightarrow Changes in laws and regulations

Changes in laws and regulations in the fuel and liquified gas industries could affect the conditions under which operations are carried out, in such a way as to have a negative effect on the business and, consequently, on the Company's results.

## Food sector

For this sector, the availability of pelagic species in the different to exchange rate fluctuations, a risk that can be limited with the fishing zones is a determining factor in its results. A second use of forwards or other financial instruments. risk factor is the market prices of fishmeal and fish oil, which are obtained from the balance between supply and demand, with Peruvian production being a determining factor in terms of supply, and consumption in Asia in general and China in particular, in terms of demand.

Since a large part of its production is exported, the results of operations in this sector are sensitive to exchange rate fluctuations and to policies to promote exporters in competing countries. Fishmeal and fish oil are traded mainly in dollars, so a significant percentage of the revenues of companies in this sector is indexed to this currency. Given this characteristic, bank debt generally held by the companies corresponds to shipping prepayments in dollars. Therefore, the necessary conversion to Chilean pesos of a significant portion of the returns is exposed

## Insurance

The Company and its subsidiaries maintain insurance on its The risk associated with operational, commercial and adminmain assets, which cover fire, earthquake, damages due to istrative activities is evaluated year by year, which allows for stoppages, civil liability and other risks of lesser incidence on adequate management, incorporating appropriate hedges or its net worth. These risks are reasonably protected through first modifying existing ones, in accordance with market offers. class domestic companies, which reinsure most of the significant risks with first class reinsurers based in Europe.

- Sales agreed in currencies other than the U.S. dollar are generally converted into such currency through the use of forward contracts that dollarize such revenues. This eliminates the risk associated with the volatility of those currencies in relation to the U.S. dollar. Costs of the fisheries sector are highly sensitive to fluctuations in fuel prices, particularly diesel and bunker oil.
- On the regulatory side, the application of fishing quotas, closures and restrictions imposed by the authorities can significantly affect the production of subsidiaries and related companies in this sector. A few months ago, a new fishing law started its legislation process in Congress, which aims to modify the existing regulations for this industry.

## ONE SAME

## Legal or regulatory framework that regulates or affects the industry

Empresas Copec S.A. is governed by Law N° 18,046 on corporations, Law N° 18,045 on the securities market and the applicable regulations of the Financial Market Commission.

The forestry sector in Chile is regulated by the Forestry Law of 1931, Decree Law N° 701 of 1974, and Law N° 20,283 on the recovery and conservation of native forests. These regulations establish requirements for forest exploitation and management, including the need for management plans approved by the National Forestry Corporation (CONAF) and penalties for noncompliance. In addition, Law N° 19,300 regulates the environmental impact of forestry activities, requiring approved environmental impact studies or statements prior to project implementation.

In other countries, the forestry industry is regulated by different regulations, including:

• Brazil: The Forestry Code (Law N° 12,651/2012) establishes rules for conservation, sustainable use and recovery of degraded areas.

- Colombia: Decree 1073 of 2015 and its amendments establish environmental provisions applicable to the energy sector, regulating the generation, transmission, distribution and commercialization of electricity, as well as environmental management in the exploration and exploitation of hydrocarbons.
- United States: The Endangered Species Act and the Clean Water Act influence forestry activities, along with specific state regulations.
- European Union: The EU Timber Regulation (EUTR) prohibits the marketing of illegally harvested timber and requires traceability in the supply chain.

The subsidiaries of the energy sector in Chile are regulated by Law N° 18,410, which establishes the creation of the Superintendency of Electricity and Fuels (SEC), whose purpose is to oversee compliance with legal and regulatory provisions, as well as technical standards on generation, production, storage, transportation and distribution of liquid fuels, gas and electricity, to verify that the quality of the

services rendered to users is as indicated in said provisi and that the operations and use of energy resources do constitute a danger to persons or goods.

In addition, Supreme Decree N° 160 of the Ministry of Econo Development and Reconstruction on "Safety Regulati for Facilities and Operations of Production and Refin Transportation, Storage, Distribution and Supply of Lic Fuels."

At the national level, subsidiaries in the food sector regulated, since 2013, by Law N° 20,657, which replace the General Law on Fisheries and Aquaculture (LG N° 18,892. This regulation seeks to privilege scientific critering fisheries management, based on concepts such as Maxim Sustainable Yield (MSY) and Biological Reference Poi (BRP). It also introduces the Tradable Fishing Licenses ( for its acronym in Spanish), which correspond to fraction of the annual industrial quota, which are awarded to ea fishing company according to its historical catches. In addit this law establishes a bidding mechanism of up to 159

ions not omy, ions ning, quid	the industrial fraction of the overall quota, when the latter exceeds certain limits, and includes a specific tax, payment of patents on operating vessels, a new division of annual global quotas, which implies a transfer of quotas from the industrial sector to the artisanal sector, and new inspection requirements for artisanal vessels over 12 meters in length. On January 2, 2024, a bill was submitted to Congress to replace Law N° 20,657, which is currently being processed.

1. . ARAUCO 2024 data is in the process of being verified.

The increase in Scope 3 emissions is attributed to the forestry and energy sectors. On one hand, there was an update in the calculation methodology in the shipping industry that impacts the emissions associated with the transportation and distribution of products of the subsidiary ARAUCO, and the increase in the acquisition of fertilizers for application in new forests. On the other hand, the subsidiary Terpel recalculated its footprint due to certain factors such as the updating of CO<sub>2</sub> emission coefficients in Scope 2 and the reclassification of some emission sources, transferring Scope 3 emissions to Scope 1. In identifying op-portunities for improvement, Terpel focused on the consolidation of emissions in Scope 3. In addition, in 2024, the emissions generated by the transportation carried out by affiliated service stations and by the movement of products with own fuel were estimated. In addition, emissions from the energy consumption of the Voltex and Gogoro business lines were analyzed, as well as emissions generated by the transportation and final disposal of waste.

2. Includes all of the subsidiary's production facilities, except the wood plants in Puerto General San Martin and Puerto Aglomerado Zarate in Argentina. Volatile Organic Compounds (VOC) were not measured in the five Pulp and Energy plants in Chile and Argentina. 100% of the panel mills meet VOC content and emissions standards, and all products are California Air Resources Board (CARB) or E2/E1 certified, which means they have low formaldehyde (VOC) emissions.

2023 emissions from the forestry sector did not consider all its facilities, which explains the increase when compared to 2024

3. In the food sector, reported seawater extraction is high due to the operational need to pump water for fish preservation, cleaning of vessels and equipment. In addition, the volume of effluent discharged is greater than the volume extracted, since the fish caught contains a significant percentage of water in its biomass, which is released during processing on board and later on land. This phenomenon explains the difference between extraction and discharge, reflecting the natural dynamics of the water contained in marine organisms.

5. In 2024, bark recovered for combustion and sludge from the effluent plant at ARAUCO's Arauco Line 2 plant were considered in the "Incineration with energy recovery" category.

On the other hand, packaging wood that is incinerated without energy recovery is excluded from the total waste generation. Finally, the category "Waste disposed of in other ways" includes the disposal of industrial waste from pulp mills.

6. The values reported in 2023 for hazardous waste from the food sector were adjusted due to the revision and update of the data collection and classification methodology.

Non-hazardous waste GRI (306-4 / 306-5) 🛇

ANNEXES BY CHAPTERS FINANCIAL STATEMENTS

Empresas Copec carries out materiality assessments with the direct participation of internal and external stakeholders. These are periodic exercises where, at least once a year, the most relevant issues that may impact the Company's social environment or have implications for its future development are reviewed.

At the beginning of 2024, a dual materiality exercise was conducted for the first time<sup>(1)</sup>, aiming to integrate environmental, social and governance criteria, and thus understand and manage, in a more efficient, sustainable and responsible way, the business risks and opportunities (financial materiality) and the environmental and social

impacts on the surrounding areas (materiality of impacts). This process included the early participation of the risk area in its definition and analysis categories, in order to ensure consistency with the main corporate risk management systems. At the end, the material issues identified were validated by the CEO and approved by the Board of Directors.

#### STEP 1: SETTING PARAMETERS

STEP 2: IDENTIFY LIST OF MATERIAL ISSUES

#### STEP 3: PRIORITIZE

 $\rightarrow$  Determine the material issues of Empresas Copec and its subsidiaries using three parameters: importance, impact and influence.

 $\rightarrow$  Each parameter includes clearly defined criteria to improve the robustness of the process, as well as to eliminate subjectivity to the greatest extent possible.

ightarrow Define a list of issues to be assessed, based on:

- Relevant ESG frameworks and standards (including Global Reporting Initiative GRI, SASB, TCFD and CMF NCG N° 461), current legislation, global, market and industry trends and media.
- Previous materiality matrix and emerging issues.
- Sustainability frameworks, ratings and standards.

 $\rightarrow$  Stakeholder engagement to prioritize material issues included interviews conducted with members of the Board of Directors of Empresas Copec, executives of the Company and subsidiaries, investors, suppliers, auditors, ESG consultants, think tanks and NGOs.

 $\rightarrow$  The prioritization criteria included probability and impact parameters under the perspective of financial and environmental relevance.

#### STEP 4: ANALYZE AND VALIDATE STEP

 $\rightarrow$  The material issues were analyzed by identifying three prioritization ranges, which allows to focus on the initiatives that will be worked on in the Company in the short and medium term.

 $\rightarrow$  The materiality matrix was validated by the CEO and submitted to the Board of Directors.

INNOVATION

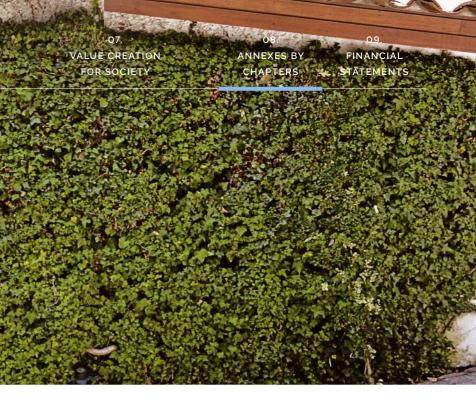

IN THE DNA

ION AND NATU

In order to identify and manage in a timely manner the issues that stakeholders consider most relevant, Empresas Copec classifies stakeholders into direct and indirect, according to their dependence on the Company and its subsidiaries. The former are those who, through their work, have a direct impact on the management of Empresas Copec, while the indirect stakeholders are related through their impact on the operation of the subsidiaries.

In 2024, future generations were included among the priority stakeholders, as a result of the discussion and announcement of the new corporate purpose, which seeks to promote sustainable investments and a long-term vision to contribute

hope for the generations to come. These are the people who will live in the future: those who have not yet been born or are just beginning to develop. They are the ones who will inherit the decisions, resources and challenges we face today.

In the first instance, attention to this particular stakeholder group has been considered in order to include a vision of the future in all guidelines, policies and challenges established within the Group. It has also been included in the Company's communications and exchanges with its external audiences. An example of this is the campaign on short-termism developed by Empresas Copec at the public opinion level.

## **TCFD** Index

Empresas Copec recognizes that climate change represents a global challenge with significant implications for its business and society in general. In this context, the Company has adopted the Task Force on Climate-related Financial Disclosures (TCFD) framework, to strengthen transparency in the disclosure of climate risks and opportunities, aligning its strategy with international best practices.

This index details the way in which Empresas Copec and its subsidiaries address governance, strategy, risk management and metrics associated with climate change, providing information on the initiatives and processes implemented to assess and mitigate these impacts.

### SASB Index NCG 461 (8.2) 🕑

This approach seeks to provide stakeholders with a more comprehensive view of the Company's activities and their impact on sustainability.

Empresas Copec reports sustainability information following the definitions of the Sustainability Accounting Standards Board (SASB). According to SASB's Sustainable Industry Classification System (SICS), the main classification corresponds to the Oil and Gas - Refining and Marketing industry.

However, given the diversity of sectors in which it operates, the Company considers it relevant to include additional metrics applicable to other industries within the SASB framework. Therefore, in addition to the primary industry, relevant information is provided for the Forestry Management, Pulp and Paper Production, and Meat, Poultry and Dairy sectors.

09. FINANCIAL STATEMENTS

Empresas Copec is a world-class company that seeks to In the development of its activities, it strives to be a deliver an attractive level of profitability in the long term good citizen, and attends to and respects the interto its investors, and to contribute to the development ests of shareholders, collaborators, partners, suppliers, customers, communities and all parties with whom it is

> acts in all its decisions in accordance with ethical and transparency standards.

C

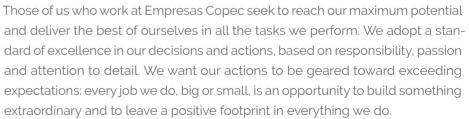

Integrity To be of integrity and consistency in order to always try to do the right thing

We aim to act with rectitude and transparency, building relationships based on trust. Our way of conducting ourselves must always be ethical, that is, we seek to do the right thing, even when it is difficult, unpopular or goes unnoticed. Being of integrity helps us to develop a better environment, in which mistakes are recognized and their consequences are corrected, showing coherence between what is said, what is decided and what is acted upon. We encourage Empresas Copec to be an organization of integrity and reliability.

# Excellence Giving the best of each one of us to do things with excellence

Innovation Constantly searching for new paths and innovations to improve people's lives

At Empresas Copec we promote curiosity, innovation and the courage to explore the unknown, challenge the established and transform obstacles and mistakes into possibilities for growth. We give space to try and create new paths, through a culture that encourages the search for transformative solutions that improve people's lives.

Through innovation and our constant commitment to collective well-being, at Empresas Copec we create opportunities that make a better future possible.

Long Term Have a long-term vision to contribute to the solution of society's major challenges

We want to have a positive impact on the world. We understand that a company cannot last over time if it does not act sustainably. Thus, at Empresas Copec we evaluate our success based on the legacy we are leaving to future generations. Our decisions and actions are always guided by a long-term vision, which drives us to think in decades, beyond immediate results, seeking to ensure that each action contributes to the well-being of society, today and tomorrow.

# 5

People at the Center Focusing our attention on people's well-being and development

People are at the heart of our actions, guiding all our decisions and actions. We put their well-being, needs and development first, seeking to generate a positive impact on their lives, both inside and outside the organization. We respect the individuality and value of each person, prioritizing their care, progress and happiness. We act with empathy, to put ourselves in the other person's place and understand their concerns and needs. At Empresas Copec we work so that people can develop, fulfill their dreams and achieve a full life.

April 10, 2025

To: The Board of Directors of Empresas Copec S.A. Present

We have performed a limited assurance engagement review of a group of indicators included in the 2024 Integrated Report. in accordance with the Global Reporting Initiative Standards (hereinafter "GRI"), the Sustainability Accounting Standards Board (hereinafter "SASB"), General Standard No. 461 and its amendment, General Standard No. 519 (hereinafter "NCG"), both issued by the Financial Market Commission (hereinafter "CMF"), Sustainability Accounting Standards Board (en adelante "SASB") and ESG indicators (hereinafter "ESG Indicators") of Empresas Copec S.A., (hereinafter "the company"), for the period period between January 1, 2024 and December 31, 2024.

#### Standards and Assurance Process

Our responsibility is to express a limited assurance conclusion of the consistency of the indicator included in the Integrated Report for the period ended as of December 2024 in accordance with GRI, NCG, SASB and ESG indicators based on the procedures that we have performed and the evidence we have obtained. We conducted our limited assurance engagement in accordance with International Standard on Assurance Engagements Other than Audits or Reviews of Historical Financial Information (ISAE 3000), issued by the International Auditing and Assurance Standard Board (IAASB). This standard requires that we plan and perform this engagement to obtain limited assurance about whether the of consistency of the indicator included in the Integrated Report for the period ended as of December 2024 in accordance with GRI, NCG, SASB and ESG indicators is free from material misstatement.

A limited assurance engagement involves performing procedures (primarily consisting of making inquiries of management and others within the entity, as appropriate, and applying analytical and other procedures) and evaluating the evidence obtained. The procedures also include assessing the suitability in the circumstances of the company use of the applicable criteria as the basis for the preparation of the of consistency of the indicator included in the 2024 Integrated Report for the period ended as of December 2024 in accordance with GRI, NCG, SASB and ESG indicators.

Deloitte Touche Tohmatsu Limited es una compañía LLittle New Street London, EC4A 3TR, Reino Lloido,

April 10, 2025 Empresas Copec S.A. Page 2

#### Our review included the following procedures:

- 2024.
- against which to evaluate the company estimates.

The procedures performed in a limited assurance engagement vary in nature and timing and are less extensive than for a reasonable assurance engagement. Consequently, the level of assurance obtained in a limited assurance engagement is substantially less than the assurance that would have been obtained had we performed a reasonable assurance engagement.

#### Our independence and quality control

behavior

The firm applies International Standard on Quality Control 1, Quality Control for Firms that Perform Audits and Reviews of Financial Statements, and Other Assurance and Related Services Engagements, and accordingly maintains a comprehensive system of quality control including documented policies and procedures regarding compliance with ethical requirements, professional standards, and applicable legal and regulatory requirements.

#### Conclusion

follows:

#### GRI Indicators:

2-1	2-2	2-3	2-5	2-6	2-12	2-13
2-14	2-17	2-19	2-20	2-26	201-1	305-1

#### 09. FINANCIAL STATEMENTS

• Meeting with the team that led the process of preparing the 2024 Integrated Report. • Review of evidence for the indicators detailed in this letter, as well as the result of the materiality process, with the areas participating in the preparation of the Integrated Report

• Analysis of the traceability of the contents of the indicators subject to verification and included in the Integrated Report 2024, in accordance with the requirements established in the GRI, NCG, SASB and ESG indicators and Own Indicators Standards. Review of the information included in the Integrated Report 2024 from supporting documentation provided by Management, however, our procedures did not include testing the data on which the estimates are based or separately developing our own estimates

We have complied with the relevant rules of professional conduct and code of ethics applicable to the practice of accounting and related to assurance engagements, issued by various professional accounting bodies, which are founded on fundamental principles of integrity, objectivity, professional competence and due care, confidentiality, and professional

The verification process was carried out based on the indicators defined by Management as

INDEPENDENT AUDITOR'S REPORT (Free translation from the original in Spanish)

Santiago, February 27, 2025

To the Shareholders and Directors Empresas Copec S.A.

#### Opinion

We have audited the consolidated financial statements of Empresas Copec S.A. and subsidiaries, which comprise the consolidated statements of financial position as of December 31, 2024 and 2023, and the related consolidated statements of income, comprehensive income, changes in equity, and cash flows for the years then ended, and the related notes to the consolidated financial statements.

In our opinion, based on our audit and the reports of other auditors, the accompanying consolidated financial statements present fairly, in all material respects, the financial position of Empresas Copec S.A. and subsidiaries as of December 31, 2024 and 2023, and the results of its operations and its cash flows for the years then ended in accordance with International Financial Reporting Standards issued by the International Accounting Standards Board.

We did not audit the financial statements of the subsidiary Copec S.A. whose financial statements include total assets that represent 21.24% and 23.47% of total consolidated total assets as of December 31, 2024 and 2023. We also did not audit the financial statements of the subsidiary Alxar Internacional SpA and its indirect associate Cumbres Andinas S.A., whose assets and net income represent 2.66% and 11.90% in 2024 and 2.62% and 42.15% in 2023, respectively of total consolidated as of December 2024 and 2023 and for the years then ended. Those financial statements were audited by other auditors, whose reports have been provided to us, and our opinion, insofar as it relates to the amounts included for these companies, is based solely on the reports of those auditors.

#### Basis for Opinion

We conducted our audits in accordance with Generally Accepted Auditing Standards in Chile, Our responsibilities under those standards are further described in the Auditor's Responsibilities for the Audit of the Financial Statements section of our report. We are required to be independent of Empresas Copec S.A. and subsidiaries and to meet our other ethical responsibilities, in accordance with the relevant ethical requirements relating to our audits. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Responsibilities of Management for the Consolidated Financial Statements

Management is responsible for the preparation and fair presentation of the consolidated financial statements in accordance with International Financial Reporting Standards issued by the International Accounting Standards Board, and for the design, implementation, and maintenance of internal control relevant to the preparation and fair presentation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the consolidated financial statements, management is required to evaluate whether there are conditions or events, considered in the aggregate, that raise substantial doubt about Empresas Copec S.A. and subsidiaries' ability to continue as a going concern for at least, but not limited to, twelve months from the end of the reporting period.

Auditor's Responsibilities for the Audit of the Consolidated Financial Statements

Our objectives are to obtain reasonable assurance about whether the consolidated financial statements Our objectives are to obtain reasonable assurance about whether the consondated mandrata statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance but is not absolute assurance and therefore is not a guarantee that an audit conducted in accordance with Generally Accepted Auditing Standards in Chile will always detect a material misstatement when it exists. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control. Misstatements are considered material if there is a substantial likelihood that, individually or in the aggregate, they would influence the judgment made by a reasonable user based on the financial statements

In performing an audit in accordance with Generally Accepted Auditing Standards in Chile, we:

- Exercise professional judgment and maintain professional skepticism throughout the audit.
- Identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, and design and perform audit procedures responsive to those risks. Such procedures include examining, on a test basis, evidence regarding the amounts and disclosures in the financial
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of Empresas Copec S.A. and subsidiaries internal control. Accordingly, no such opinion is expressed.
- Evaluate the appropriateness of accounting policies used and the reasonableness of significant
  accounting estimates made by management, as well as evaluate the overall presentation of the financial statements.
