Future generations

Thinking about future generations means taking on the challenge of building and strengthening today the foundations that will shape the world of the future. Although we are aware that in every society there are immediate needs and urgencies, at Empresas Copec we understand that our responsibility is not only to meet current demands, but also to project a prosperous future for the children of today and those yet to come. This implies being a good ancestor, that is, recognizing that today's actions will have an impact tomorrow and that only through a collective effort and with a long-term vision can we contribute to building a more prosperous, sustainable and fulfilling world for future generations.

STATEMENTS

Welcome to the 90th edition of Empresas Copec S.A.'s Integrated Annual Report

GRI (2-2 /2-3/2-5) 🕢

Accessibility

(CMF) website, the corporate website and the Company's investor relations site.

Reporting period

From January 1 to December 31, 2024. For some indicators and in order to compare trends, two or more years of data are used.

Scope

The scope of the data published in the 2024 Integrated Report is consistent with the basis of the Company's consolidated financial statements, published in Note 2, section 2.2. When the scope of the report is different or there are changes in the data, it shall be reported separately as a footnote.

This document does not consider the reportability of the sustainability indicators of Gasib's business, acquired on December 12, 2024. Its systems are in the process of integration and alignment with our management standards and will be reported in the 2025 Integrated Report.

Reporting standards and principles

This document is available on the Financial Market Commission This report is based on the requirements of the regulations of the Financial Market Commission (CMF) under General Rule (NCG) N° 30, N° 461 and N° 519. It also reflects other global indicators such as the Sustainability Accounting Standards Board (SASB), Global Reporting Initiative (GRI) and other frameworks including the Task Force on Climate-Related Financial Disclosures (TCFD) and the UN Sustainable Development Goals (SDGs).

> To respond to each of these standards, the index section is provided in Chapter 8.

Financial and extra-financial audit

Empresas Copec's consolidated financial statements as of December 2024 were audited by PwC. The audit's report is attached in chapter 9 of this document.

On the other hand, to ensure the reliability and fairness of the process of preparing the public data and the content of this report, Empresas Copec requested Deloitte to verify certain indicators, which are identified with the icon @ within the document. The detailed assurance statement is included in chapter 8.

STATEMENT

Company Presentation

Empresas Copec is an investment holding company that is engaged in two main areas of activity: natural resources, where it has clear competitive advantages, and energy, which is closely linked to the growth and productive development of countries.

In each of these areas, it seeks that the development of its business is carried out under a sustainable management model, which ensures that the business activity considers the care of the environment and the generation of social and economic value for its different stakeholders.

To this end, Empresas Copec conducts its activities with efficiency and high ethical and transparency standards, striving for the efficient and sustainable use of natural resources, promoting important investment programs and delivering an attractive level of profitability to its investors in the long term.

Specifically, it has presence in the forestry business through its subsidiary ARAUCO, the company with the largest forestry assets in South America, one of the largest forestry producers in the world and one of the main generators of non-conventional renewable energy in Chile.

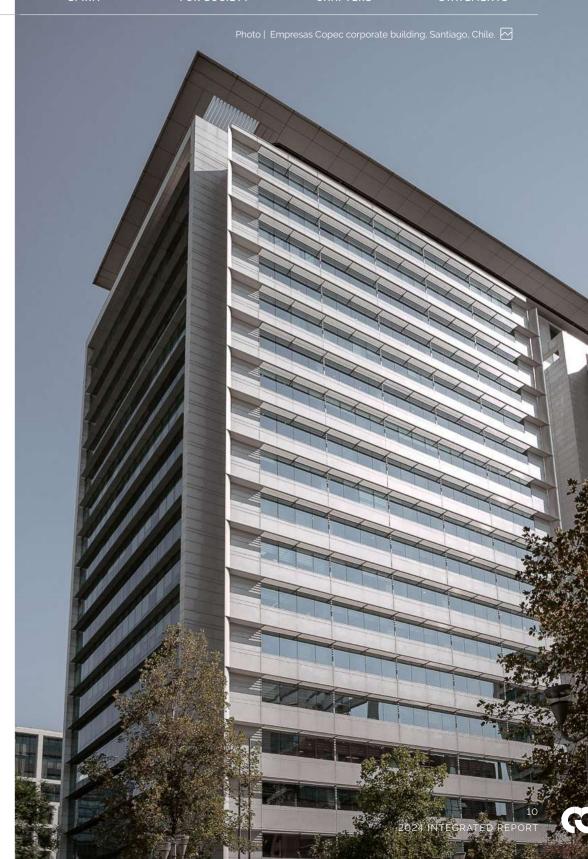

In energy, Empresas Copec has investments in companies that distribute liquid fuels, lubricants, liquified gas and natural gas, as well as in the provision of energy solutions based on renewable

energies and focused on new ways of mobility. This takes place through its subsidiaries Copec, Terpel, Abastible, Duragas, Solgas, Colgas, Gasib, Sonacol and its related companies Metrogas and Aprovisionadora Global de Energía. It also has a presence in the convenience store business through its subsidiary Arcoprime.

In the food industry, it has presence through its subsidiary Igemar, which has stakes in Corpesca and Nutrisco. These companies operate in the northern and south-central regions of the country, respectively, producing fishmeal and fish oil, canned fish, frozen fish and distributing other types of food. Also, through its related companies Inversiones Caleta Vitor and Golden Omega, it has presence in the protein food, aquaculture and Omega 3 concentrates business.

It is also present in metal mining, through its subsidiary Alxar Internacional, and in the real estate sector, through Las Salinas and Remedia Green Tech.

All these operations consolidate important production platforms in Chile, Germany, Argentina, Brazil, Canada, Colombia, Ecuador, Spain, the United States, Mexico, Panama, Peru, Portugal, the Dominican Republic, South Africa and Uruguay, which allow to market a wide range of products in more than 80 countries on five continents.

Letter from the Chairman

Dear shareholders:

This 2024 Integrated Report allows us to give you an official account of the past year for Empresas Copec. It was a challenging year, with growing instability at the international level, as well as a persistent stagnation of economic activity at the local level, but in which we were able to continue developing the strategic plans of each of our businesses.

longation of armed conflicts in Europe and the Middle East, coupled with the electoral success of more polarized leaders and sectors, which have favored less globalized optics. Little by little, these policies have been shaping a true trade war, leading in turn to a deep reconfiguration of logistic chains and a potential reordering of the geopolitical blocks that had been the pillar of the world order in recent decades. On the economic front, post-pandemic inflation, although it has been receding, has done so with greater difficulty and more slowly than expected, so that interest rates have remained high for longer than expected, with the consequent impact on activity.

During the year 2024, Chile recorded a meager economic growth, close to the average of Latin America, one of the regions with the lowest dynamism in the world. We are concerned that, as a society, we seem to have lost the desire to grow more. Undoubtedly, growth is certainly not everything, but it is important. Without it, we are doomed to have a country with fewer opportunities, more social conflicts and, undoubtedly, greater frustration. Low growth rates impact job creation, wage levels and access to

more and better goods and services. It also has an impact on tax collection and, therefore, on the sustainable financing of policies aimed at meeting the growing social demands of the most vulnerable sectors. And, of course, it conditions future expectations, moods and hopes.

08.

ANNEXES BY

CHAPTERS

Growing more, then, becomes an obligation and a task for all of us. Therefore, it is necessary to give relevance again to this issue and to think of policies that promote entrepreneurship, investments. Growth should not be a restriction, but a conviction.

The global geopolitical context has been shaped by the pro- In this regard, despite its larger budget, our State has been weakening, withdrawing from its most basic tasks, such as security; deteriorating the level of essential services, such as health and education; abandoning fiscal prudence and discipline, and attempting to transfer its own responsibilities to the private sector by means of discretionary requirements in the authorization processes. We need an agile and efficient State, that provides excellent services to citizens and strong fiscal control, but which is also, and this should be a central part of its essence, a promoter of private economic activity. Public institutions seem to have forgotten that supporting and favoring the development of new projects that indeed respect the regulations, is something that benefits everyone.

> It is time for the State to put itself back at the service of society and not otherwise, for public policies to be designed again with a vision of the future, based on technical criteria and broad agreements, thus allowing them to endure over time, despite differences that may be valid. The fragmentation of the political spectrum, the lack of a long-term view in the debate and state action have generated enormous costs to our society. It is

much more difficult to face new problems, such as uncontrolled immigration or misinformation, if we do not do it all together, defining common objectives and looking forward in the same direction. For this, we need our political class to show willingness and vocation for service and leadership, but also for the country's institutional framework to establish the right systems and incentives. The reform of the political system that we have pending is urgent, in order to reestablish the impulse to the convergence of public policies and to raise our gaze, putting an end to immediacy and zero-sum logic.

It may also be time to try a simplification with a "zero base" in several matters, not refoundational, but relevant in terms of eliminating unnecessary paperwork, formalities and requirements. The so called "permitology" in Chile has reached its limit. We need to move to a system that is based more on trust and responsibility, where the benefits that private projects bring to society and people, and not only their costs, are adequately weighed. In general, private projects aim to solve some social needs, and the current system seems to forget this, as it prevents progress until even the smallest detail, no matter how insignificant, has been resolved. This is not right. We are not against demands, on the contrary, however, we ask that they be clear and stable, simple to process and supervise.

A system less discretionary, more stable and predictable, contestable, by the way, whose consequences are not eternal delays or, simply, blockage of investment. In an election year, we expect to see these issues in the public debate.

It is in this context that our companies have had to operate during 2024. Empresas Copec posted a net profit of US\$ 1.111

billion, more than three times the figure of the previous year, and an EBITDA of US\$ 3.015 billion, that is, 31% higher than in 2023. This is mainly the result of improved operating results in the forestry sector, which had a low basis for comparison, and energy, where all subsidiaries performed better. ARAUCO recorded higher volumes and lower costs, related to the operation of its Line 3 (MAPA) and an increase in pulp prices, as well as a rise in panel volumes, achieving results that are consistent with what can be called a "mid-cycle" in pulp prices. Meanwhile, Copec reported growth in the industrial margin and in the lubricants segment; Terpel was favored by an inventory revaluation effect, and Abastible posted attractive growth across all the geographies where it has presence.

In 2024 we also continued to invest, with the long-term view that has always been at the core of our way of doing business. Total investment for the year reached US\$ 2.134 billion, with more than 98% allocated to the forestry and energy sectors, confirming our focus on these two business areas, an emphasis on which our future growth will continue to be based.

This figure includes multiple initiatives, described in greater detail in the different sections of this Report. Among them, it is worth mentioning the completion of the MAPA project, which, in total, involved resources in the order of US\$ 3 billion, the largest investment in the history of Empresas Copec so far, and one of the largest projects recently executed in Chile. Its start-up was successfully completed in mid-2024 and allows for a significant increase in pulp production, at very competitive costs and even more environmentally friendly.

But as ARAUCO competes in a global and sophisticated market against corporate giants from many other latitudes, it must continue to think about the next steps in order to maintain its scale and relative importance through new and large investments. During the year, we announced the future construction of a pulp mill in Brazil, in the state of Mato Grosso do Sul, near the town of Inocência, in an area known as the "Pulp Valley", a place with multiple logistical advantages and excellent conditions for forest growth. This is the Sucuriú project, which contemplates an investment of US\$ 4.6 billion and whose construction has already begun, with the goal of being in production in 2028.

Sucuriú is nothing more and nothing less than the largest project in the history of the pulp industry in the world. A plant with a production capacity of 3.5 million tons per year, with a unique design, but based on proven equipment, which allows us to move the frontiers of scale economies and achieve the most competitive unit costs in the industry, increasing the pulp production capacity of our subsidiary by 70%.

Allow me to make a reflection here. There are not many industries in which Chile is a global leader. Well, forestry is one of them. We are redefining the dimensions of productive expansions in the industry, building the largest capacity plant in the world. We are a Chilean company that is taking on a multibillion dollar challenge to carry out a project of enormous magnitude, addressing its engineering, geographic, legal, administrative, financial, technological and human aspects, aligning our best resources to do so. We will create almost 400,000 new hectares of plantations, with all that this means in terms of environmental and climate contribution; we will establish biodiversity

protection and enhancement areas; we will employ more than 14,000 workers during construction and more than 6,000 on a permanent basis; and we will manage the forests so that they are more resilient to climate and biological threats. In short, these are titanic tasks, with huge benefits for the company, but also for its environment and the planet. If only we could see it in its entire magnitude and, like many other countries, be, as Chileans, proud of our forestry industry, recognizing the value that this and other natural resources can generate for our countries and their people.

At the same time, ARAUCO is making progress in two important expansions of its panel production capacity, through a project in Zitácuaro, Mexico, which will double its capacity in that country, and another in the province of Nuble, Chile.

This way, ARAUCO is strengthening its global leadership, which is also reflected on the technological front, for example, with the launch of Lemu Nge, the first hyperspectral satellite to monitor changes in the planet's biodiversity, or with the investment in TreeCo, the most advanced company in genetic improvement of forest species to optimize their characteristics, based on CRISPR-Cas9 technology.

Through all of these initiatives, ARAUCO is defining the future of the forestry sector today.

In order to be able to do so, it is necessary to ensure that we maintain a sound financial balance sheet that provides resilience in the face of unpredictable price cycles and preserves adequate financial margins to address any opportunities that may arise, especially in those geographies and activities in which our position allows us to leverage our competitive advantages in

08. ANNEXES BY CHAPTERS 09. FINANCIAL STATEMENTS

the long term. A responsible and disciplined management must acknowledge the circumstances under which our assets may be more valuable in other hands, and encourage appropriate divestitures to create immediate value and free resources for more profitable uses.

This is the reasoning behind the agreement reached by ARAUCO to sell 85,000 hectares of plantations in the states of Paraná, Santa Catarina and São Paulo, Brazil, to Klabin, a company whose industrial facilities are located precisely in that area, so that it can achieve greater logistical efficiencies and thus add much more value to the land in this transaction. The US\$ 1.168 billion received significantly strengthens ARAUCO's balance sheet and allows to focus on the most strategic developments in Mato Grosso do Sul, in the Sucuriú project.

With this, and with the resources of up to US\$ 1.2 billion in capital committed by the parent company Empresas Copec, ARAUCO is on a solid financial position to begin this monumental project in Brazil. Financial prudence, a hallmark of our management throughout our history, is also evident here, and has been the basis for the confidence that the financial markets have placed in the Company. Thus, for example, 2024 was the year of the largest financial placements by Empresas Copec and its subsidiaries in the Chilean bond market, with almost US\$ 800 million, including green issues and some record corporate rates and spreads for the year.

As mentioned above, large-scale industrial assets require a forest formation effort to be supplied, being an increasingly relevant contribution to climate change containment, through the absorption of millions of tons of CO₂ in plantations. There

are few activities more aligned with the reduction of greenhouse gases than the forestry business. The greater ARAUCO's growth is, the greater its contribution in terms of climate change. A virtuous circle.

But this environmental challenge is colossal and extends far beyond our business boundaries and the management of the direct impacts of our activities. One of the most fundamental pieces to address it is energy transition, a task where we feel called upon to take on a relevant role, especially due to the prominent position of our companies, leaders in key segments of this business area. And a leader takes on its role.

The energy transition requires a deep transformation of the supply chains of the most diverse industries, and this, in turn, culminates in an imperative need for materials and minerals, which are indispensable for building the future we dream of. One of the most essential is copper. Mina Justa, an initiative that our affiliate Alxar Internacional promoted in Peru together with Breca Group, has contributed significantly, with a production of 120 thousand tons of fine copper in 2024, in concentrates and cathodes, and with tremendously competitive costs.

Mina Justa has continued to evaluate alternatives to scale up its operations. Among these is its underground project, which is moving forward in its engineering studies. If carried out, it will increase reserves by 30% and extend the useful life of the current mine, sustaining higher production levels for a longer period of time.

Many see that the lack of minerals could become a real constraint to achieve a successful energy transition. This mobilizes us to continue looking for alternatives, with a broader view in

terms of minerals, but with a special focus on copper, given its prospects and based on the successful experience we have been developing in the region of Marcona, Peru.

However, we cannot fail to point out that it is our subsidiaries in the energy sector, Abastible and Copec, that have the most direct role in this transition process. While other companies focus on the specific offer of a product, ours have adopted, for years, a broader view, adapting to changes, following new trends and taking care that the consumer experiences are the best. The customer's point of view means that the way we face this new scenario is different. They no longer ask us for fuels, but for lower energy costs. For this reason, with the support of each of their brands, being leaders in their respective countries, our subsidiaries anticipate the energy needs of their different customers, to meet them now with comprehensive and innovative solutions.

Both Abastible and Copec have been opening paths to better face the challenges presented by the new energy scenario. Thus, they have been getting involved in initiatives such as solar energy, highlighting the acquisition in 2024 of Granja Solar, a 123 MWp energy park in the Tarapacá Region. But in recent years, activities related to distributed renewable generation, static and interchangeable batteries, optimization of energy consumption based on artificial intelligence, electrolyzers to produce hydrogen at low cost, among many others, have also been added. In this scenario, our subsidiaries in energy and efficiency services have been particularly important, accompanying clients in their transition to new energies, advising them on how to implement the changes in an efficient, reliable and safe manner.

Copec's innovative vocation is also expressed through its venture capital fund Wind, based in Silicon Valley, acknowledged as the best Corporate Venture Capital in Chile, and whose participations as a strategic investor in startups with disruptive and diverse business models, open up new growth options. In addition, through its Garage, located in Santiago, Copec is experimenting with new products and business models, also with a global perspective and with the express mandate to challenge what is currently its core business. All of this, under the integrating vision of growing in mobility, new energies and convenience, while maintaining its recognized quality of service in its traditional conventional fuels business.

Copec plays a crucial role in driving electromobility. As well as being the most extensive fast-charging network in South America, Copec Voltex is the largest supplier of energy for electric buses in the world outside China, having been awarded more than 20 electroterminals for buses. Voltex is also leading electromobility in Colombia and Panama, through Terpel, by installing and operating the first fast chargers in those countries, where it has also achieved a strong market position.

In this business area, we should recall that during 2024 Terpel agreed to sell its subsidiary in Ecuador and its retail distribution assets in Peru. This divestment is a result of the strategic interest of focusing on the lubricants business in those countries where it has a leadership position and greater competitive advantages, transferring these smaller-scale operations to third parties, which can better value them.

Abastible, meanwhile, extended its operations to Europe for the first time, through the purchase of the liquified gas distribution

assets in Spain and Portugal from Spanish company Cepsa. Thus, Abastible now has a commercial presence in six countries, making it one of the 10 largest companies in the world in this sector, a fuel that has an important role to play in energy transition. In addition, this operation will allow Abastible to learn in markets that are more advanced in this transition, replicating best practices and opening new growth opportunities.

I would also like to refer to a very interesting initiative being developed jointly by the subsidiaries ARAUCO, Copec and Abastible, with the support of Corfo. This is a pilot plant to produce carbon-neutral fuels from the biogenic ${\rm CO_2}$ captured in the Arauco plant's process. Three of our companies are working together, each contributing its specific knowledge and capabilities in pursuit of a noble, long-term goal.

This same long-term and sustainable vision has driven the Master Plan we have developed for Las Salinas, which seeks to transform a piece of land affected by the oil industry of yesteryear into a cutting-edge, environmentally and energetically sustainable neighborhood. Instead of having opted in the past for a quick real estate deal, selling a huge and attractive piece of land, we dreamed, instead, of leaving a neighborhood of the future to the city, a unique place, with a strong emphasis on social and community spaces, and consistent with its history. It should be noted that more than 40% of the land will be destined for public use. The project will have a large urban park, together with a system of green areas and infrastructure to connect the coastline with the upper sector of Viña del Mar, with access for pedestrian transportation.

Today, we are moving forward in the process of remediating the land, together with a leading French company, so that in a few more years we will be able to start building the neighborhood that we dream of giving Viña del Mar. This is a reward for the perseverance and long-term thinking that drives us. In fact, we will go beyond this great urban space. We will put everything we have learned in this long and complex process at the service of third parties, through the recently created Remedia Green Tech, a startup specialized in contaminated land remediation. Thus, Las Salinas will be a clear example of our firm commitment to generate value for all our stakeholders, keeping sustainability at the core of our business strategy, in order to promote a triple positive impact: economic, environmental and social.

A key component to effectively mobilize our capabilities in this direction in such a dynamic environment has been the strengthening of our corporate governance structures, which are a central pillar of our integrated management model. Its purpose is to ensure efficient, timely, transparent and sustainable management in each of our areas of operation, covering all dimensions and always aligned with our values and principles. The strategic definition of each company has been led by teams of directors who, together with our executives and collaborators, are establishing guidelines and systems of decision making and supervision for our increasingly global companies. All these efforts in governance have been recognized on several occasions, including the "Voice of the Market 2024" award, granted by the Santiago Stock Exchange, together with EY and the Chilean Institute of Directors, which Empresas Copec received for the sixth consecutive year in 2024. A recognition, an incentive to continue strengthening governance.

This is just one of the many awards that our companies have received this year 2024, in areas as diverse as corporate reputation, sustainability, innovation, citizen branding, talent attraction, customer satisfaction, supplier relations, equity and inclusion, and outstanding executives, among others.

In addition to fulfilling our basic role of providing goods and services in a reliable manner, in harmony with our stakeholders, we have been committed, for decades, to being active agents in the social sphere, to provide solutions to the great challenges facing our society. These include the great task of promoting quality education for vulnerable young people; fostering innovation in order to improve people's quality of life; promoting diversity and inclusion, to make the most of all talents and better fulfill our role in society; and permanent and focused contributions mainly in culture, sports and social housing.

These commitments are materialized through tangible contributions we make, whether in terms of financial resources, human capital, technology, innovative capacity or management excellence, supporting pioneering institutions in their respective fields, such as the Copec-UC Foundation, the UC Anacleto Angelini Innovation Center, the Arauco Foundation, Belén Educa, Enseña Chile, Elemental, Red de Alimentos, among others. In addition, we have strived to extend these principles throughout our value chains, providing support to suppliers and counterparties, mostly SMEs.

Likewise, in environmental matters, we act with determination and a sense of urgency, setting ambitious and specific goals to move steadily toward a circular economy driven by renewable energies. We are convinced that nature is an indispensable ally for the human development, and we must not only care for it, but also enhance it. The environmental dimension is inherent to our activities and, therefore, inseparable from our business decisions. ARAUCO is, by essence, a renewable and sustainable company. It was the first forestry company in the world to be certified as carbon neutral and is committed to becoming a Nature Net Positive company. Its products are increasingly present in areas such as textiles, packaging and construction, replacing less environmentally friendly alternatives. In energy, as we have already mentioned, we are adapting quickly to changes and leading the transition to a more sustainable matrix. In mining, we produce copper, a key resource to make this transformation possible.

This same spirit inspires all our companies, which develop a myriad of initiatives, impossible to list, but which explain why we have been ratified in the DJSI Chile, MSCI ESG Ratings, FTSE4Good and acknowledged in the S&P Sustainability Yearbook 2025.

Being one of the most relevant business groups in the country implies that we must play an active role and have a voice in the face of major global problems and challenges that are within our scope of action as a Company. In this line, as a way to disseminate our corporate purpose, "To shape the world for future generations", in 2024 we launched a 360° communication campaign called #NoMásCortoplacismo (No More Short-Termism). Through this campaign, we are seeking to raise awareness of a cause that concerns us, that we are committed to act on and that we want others to join. Because we need to raise our gaze, leave the immediacy, which is only concerned with the effects of our actions in the present, and give space to think about the future project we want to build as a society. What do we have

to do, starting today, to leave a better future for the generations to come? Their destiny begins to be built today, and it is precisely now when we need to set ambitious goals, dream about how we want to be in the coming decades, design projects, and be willing to make sacrifices, because nothing relevant is done without them.

Companies should be more active in communicating what we do. But also, after defining our purposes, that transcendent role we must play as an organization, telling society about our convictions and values. I believe we have taken a different, differentiating, hopefully inspiring step in this. A courageous step.

Dear shareholders, employees, customers, suppliers, directors, executives and partners, with these words we have attempted to summarize the year 2024. I acknowledge and deeply appreciate your contribution to all that we have achieved, as well as your continued support, commitment and dedication. A year of financial results that experienced a significant increase over the previous year, thanks in part to exogenous factors, but also to the resilient and adaptable structures that we have built over the years.

In these changing times of constant challenges and transformations, companies must take on a role that transcends the generation of immediate economic value and the delivery of reliable, quality goods and services at competitive prices. We are agents of change, and we are here to inspire, innovate and catalyze positive transformations with a real and significant impact on society.

We understand that our mission goes far beyond immediate financial success. We want to cultivate the talents and dreams of

those who work with us, promote harmony with the environment and contribute to its improvement, as well as strengthen our suppliers. All of this in order to actively participate, to our scale, joining forces with others to address major global challenges. A virtuous circle, without fads and with deep convictions, to accelerate change.

We believe in the power of collaboration, agreements and a job well done, always guided by our corporate values: integrity, excellence, innovation, long-term vision and placing people at the core. We aim to build a better world for future generations, step by step, but in a lasting way. This is the reason that drives us, the purpose that gives meaning to every step we take at Empresas Copec.

"We need to raise our gaze, leave the immediacy, which is only concerned with the effects of our actions in the present, and give space to think about the future project we want to build as a society. What do we have to do starting today to leave a better future to the generations to come? Their destiny begins to be built today, and it is precisely now when we need to set ambitious goals, dream about how we want to be in the coming decades, design projects, and be willing to make sacrifices, because nothing relevant is done without them."

Letter from the CEO

Dear shareholders:

"He who plants trees, knowing that he will never sit in their shade, has at least begun to understand the meaning of life." This inspiring phrase from a Literature Nobel Prize winner, was present in our process of defining our corporate purpose, an intense work of reflection that ended at the beginning of 2024, when we celebrated 90 years since the creation of this Company. And what better way to celebrate it than by projecting what should be the history that is beginning, defining a corporate guideline that is synthesized in the ambitious proposal: "To shape the world for future generations."

This purpose is not a symbolic statement, but the result of collective work and effort, which lasted almost a year and involved all members of our organization, from employees to directors, as well as many stakeholders that we went to listen to. We asked ourselves: Why is it important for Empresas Copec to exist? Is the world a better place if our Company is in it? What is its contribution beyond creating economic value? And we concluded that we want to continue contributing, in a tangible way, to the development of a better world to leave to the generations that will succeed us

This is the sense we want to give to our activity, being a guide that must permeate all our decisions: the investments we make, the projects we undertake, the causes we defend, the policies we adopt, the talent we attract and foster, the relationships we

build with the environment and society, the way we lead, the products and solutions we offer, and how we communicate.

But no purpose can be sustained without solid foundations. And that is why, also during 2024, we called for a participatory process to reflect on the values that inspire us, define us and we seek to have. What principles have sustained us in these 90 years? Which ones should guide us in the coming decades? How much do our employees know, believe in, respect and live the foundations that guide the behavior and decisions of our organization? What virtues should characterize a company that wants to leave a positive mark on society?

This process allowed us to meet again and also to imagine the future based on shared and deeply human principles, identifying five values that we want to be always guiding our journey and be present in our decision making.

Undoubtedly, we must start with INTEGRITY, since we must seek to be honest and consistent people, always trying to do the right thing, even when it is difficult, unpopular or goes unnoticed. We believe that being of integrity allows us to develop a better environment, in which mistakes are recognized and their consequences are corrected, while also showing coherence between what is said, what is decided and what is done. This is the only way to build trust with our stakeholders and with society as a whole.

Of course, EXCELLENCE. Those of us who work at Empresas Copec seek to reach our maximum potential and deliver the

best of ourselves in all the tasks we perform. Every job we do, big or small, is an opportunity to build something extraordinary and to leave a positive mark.

The pursuit of excellence is reflected in our vocation for leadership, in the constant improvement of products and services to deliver memorable experiences to our customers, and in the development of projects that transform industries, among others.

The value of INNOVATION. We are constantly searching for new ways to improve people's lives. At Empresas Copec we promote curiosity and courage to explore the unknown, challenge the established and transform obstacles and mistakes into possibilities for growth.

Innovation is in the DNA of Empresas Copec and its subsidiaries. Throughout our history, we have always approached diverse challenges with this emphasis, anticipating, reinventing ourselves, diversifying our activities and daring to adopt new business strategies.

Our business vision is oriented to the LONG TERM. We believe that this view is key to contribute to the solution of society's major challenges. Our decisions and actions are always guided by a vision that considers long time frames, thinking in decades, beyond immediate results, seeking that each action contributes to the wellbeing of society, today and tomorrow.

And why not, considering our forestry management model, the Company's main business area, is based on the forest cycle, which can last up to 20 years, from planting to harvesting. This same vision is present in all our strategic decisions, which privilege investments with positive and long-term impact.

Companies are, in short, people doing things for other people. Therefore, PEOPLE AT THE CENTER. We want to focus on the well-being and development of people, who are at the center of our work, guiding all our decisions and actions. We seek to act with empathy and put their wellbeing, needs and development first, in order to generate a positive impact on their lives, both inside and outside the organization.

Placing people at the center is a conviction that is specifically expressed in the bonds of trust that we forge with our customers, collaborators, partners, shareholders and, in short, with all our stakeholders. We also understand that we have a responsibility to our host communities and countries, where, in addition to generating employment, growth and development, we have a powerful social role to play.

These are the values that define Empresas Copec. And although we aspire, with conviction, to embody these principles, we are also aware that the road is not free of mistakes. We are human, we can make mistakes. The important thing is to recognize them, learn and correct, with the humility of those who know that acting with purpose and being governed by values is a demanding task that is worked on every day. It is in this spirit that the Company has developed throughout its long history.

We believe that these values, in addition to contributing to the consolidation of a strong internal culture, will also distinguish us in the business community. In a world where products and services can be imitated and technologies replicated, what really differentiates a company is its identity. And at Empresas Copec we want to be recognized for our commitment to the

future, for our way of doing things and for our capacity to make a real contribution to the great global challenges.

During 2024, our businesses made steady progress in this direction. We consolidated investments in renewable energies, electric mobility, environmental remediation, forest formation and cutting-edge technology. A year in which we approved the largest investment in the Company's history. A year when we established ourselves in Europe to distribute a fuel that has a key role in energy transition and to learn from the experience of countries at the forefront of this evolution. From the launch of the Lemu Nge satellite, aimed at environmental monitoring, to the international expansion in strategic sectors, each initiative has been designed to contribute to more sustainable development.

But beyond specific projects, there is something that gives cohesion to all our work: the conviction that business activity and the resulting economic growth make sense if they generate value, contribute to wellbeing, are respectful of the environment and contribute to development. We are here to build something that transcends.

And we know that this task is only possible if we remain true to our purpose and values.

To shape the world for new generations is an invitation to raise our gaze, to plan the future, to look far ahead, to act responsibly, to work for hope.

Today, more than ever, that is the way forward.

Eduardo Navarro

Empresas Copec at a glance

Investment holding company that participates in two main areas of activity: natural resources and energy. The Company operates under a sustainable investment and management model, with high ethical and transparency standards, seeking the efficient and sustainable use of natural resources, promoting important investment programs and delivering an attractive level of profitability to its investors in the long term.

ARAUCO is one of the world's leading forestry companies in terms of surface area and pulp, wood and panel production capacity. The subsidiary generates renewable energy (biomass, wind) and captures carbon through its forestry assets and wood products.

DEVELOPMENT ENGINE

Empresas Copec and its subsidiaries generate economic and social value, driving a development ecosystem in all the countries where it has presence, promoting innovation, entrepreneurship and job creation.

The innovative spirit of the holding company is a differentiating factor that gives it a competitive advantage in the sectors where it operates and allows to consolidate high-potential investment projects.

ENABLER OF ENERGY TRANSITION AND ENVIRONMENTAL CARE

Copec leads the transition to electromobility, progressively reducing the use of fossil fuels. Together with Abastible, it promotes the adoption of energy with lower emissions intensity and 100% renewable options, which favor the electrification of consumption.

Mining investment is emerging as an important option to address the multiple challenges facing the energy transition.

PEOPLE AT THE CENTER

Empresas Copec and its subsidiaries have a significant impact on society and on people's quality of life. They are brands with a purpose and have placed the relationship with the community at the heart of their business.

Our employees, contractors, suppliers and strategic partners deliver an innovative and sustainable value proposition, promoting excellence and wellbeing.

Nutrisco promotes healthy lifestyles, based on naturally sourced and renewable foods.

2024 INTEGRATED REPORT

2.

As of December 31, 2024, consolidated EBITDA reached US\$ 3.015 billion. These results were driven by improved performance in both the forestry and energy sectors. In pulp, there were higher sales volumes and lower unit costs associated with the operation of MAPA, together with an increase in prices. Copec, on the other hand, reported growth in the industrial margin and in the lubricants segment.

Net income attributable to owners of the controlling company, net of minority interests, amounted to US\$ 1.111 billion, US\$ 762 million higher than the result recorded as of December 2023. This is largely explained by an increase of US\$ 694 million in the operating income.

→ Gross margin

Gross profit grew 18.4%, reaching US\$4.411 million. This was mainly contributed by the affiliates Copec, with US\$ 1.933 billion; ARAUCO, with US\$ 1.912 billion; Abastible, with US\$ 451 million; Igemar, with US\$ 106 million; and Sonacol, with US\$ 44 million.

→ Operating income

In the forestry sector, ARAUCO reported an increase in its operating income, due to higher volumes in the pulp and panel businesses, and higher pulp prices. These effects were partially offset by lower panel prices.

The higher operating income in energy is explained by improvements in Copec Chile and Terpel, as a result of a favorable industrial margin in Copec, together with higher lubricant sales volumes and a positive inventory revaluation effect in Terpel. Meanwhile, Abastible reported a favorable operating income compared to the previous year, as a result of a better performance of its operations in Chile, Peru, Colombia and Ecuador.

→ Other results

Non-operating income grew compared to the previous year as a result of higher other income from ARAUCO, due to the sale of forestry assets in Brazil, together with lower other expenses and favorable exchange rate differences.

Financial position statement

→ Assets

As of December 31, 2024, consolidated current assets decreased 4.5% compared to those existing at December 31, 2023. This is mainly explained by the decrease in assets held for sale at ARAUCO, related to the materialization of the sale of forestry assets, and by lower accounts receivable and inventory at Copec, partially offset by an increase in cash and cash equivalents at ARAUCO.

Non-current assets increased 0.8% compared to year-end 2023, mainly due to a hike in property, plant and equipment at $\;\;
ightarrow\;$ Equity Abastible, due to the purchase of Gasib in Europe, and in right- The Company's equity increased 4.0% compared to December of-use assets and non-current biological assets at ARAUCO.

→ Liabilities

Total current liabilities decreased by 15.5% compared to year-end 2023, as a result of a drop in other current financial liabilities at ARAUCO, Copec and the Parent Company, and lower liabilities of groups of assets held for sale at ARAUCO.

Non-current liabilities fell 0.3%, reflecting lower deferred tax liabilities at ARAUCO and Copec, offset by an increase in other financial liabilities and non-current lease liabilities.

31, 2023, primarily due to higher retained earnings.

☆ Forestry sector

\rightarrow ARAUCO

The company recorded a net profit of US\$ 476 million as of in prices. Meanwhile, revenues from the timber business fell by December 31, 2024, which compares favorably with a loss of US\$359 million in 2023. This is explained by an improvement in operating and non-operating income of US\$ 701 million and US\$ 331 million, respectively.

Consolidated revenues as of December 31, 2024 increased 8.9%, reflecting higher pulp sales, offset by a decrease in the timber segment. Sales in the pulp business increased by 22.4%, as a result of a 17.3% growth in traded volumes and a 4.6% increase

2.9%, as a result of a 7.5% decline in panel prices. Unit selling costs fell for bleached softwood (4.5%), bleached hardwood (11.4%), unbleached softwood (11.3%) and dissolving pulp (7.0%).

Non-operating income improved as a result of higher other income from the sale of forestry assets in Brazil, lower other expenses and favorable exchange differences.

Energy sector

\rightarrow COPEC

Copec recorded a net income of Ch\$ 323.058 billion, lower than the Ch\$487.639 billion reported at the end of 2023, which is explained by the decrease in earnings from discontinued operations (corresponding to Mapco's profit, prior to its sale), which were partly offset by a higher operating income in 2024.

Consolidated EBITDA reached Ch\$ 936.974 billion, a hike of 18.1%, due to a growth in Terpel's operating and non-operating income, partially offset by lower non-operating income at Copec Chile.

In Chile, EBITDA grew 4.3%, totaling Ch\$ 523.440 billion, mainly due to a favorable industrial margin, which overcame the negative effect of inventory revaluation.

Terpel's EBITDA in local currency increased 20.4% compared to the previous year, mainly due to a positive inventory revaluation effect and higher sales in the lubricants segment. Meanwhile, fuel volumes decreased 2.8% in consolidated terms, as a result of declines of 1.9% in Colombia, 4.5% in Ecuador, 10.0% in Panama and 3.7% in Peru, which were partially offset by the 6.2% increase in the Dominican Republic. In the natural gas vehicle (NGV) business, volumes increased by 3.4% in Colombia, while in Peru they fell by 12.5%.

Consolidated non-operating income for Copec was 4.2% higher, as a result of lower net financial costs, offset by a drop in exchange rate differences.

\rightarrow ABASTIBLE

Abastible reported a profit of Ch\$ 51.561 billion, an increase over the Ch\$ 49.204 billion recorded the previous year. This is mainly due to a higher operating income, partially offset by a lower non-operating income.

EBITDA increased 21.5% to Ch\$ 186.390 billion. Hikes were observed in the EBITDA of the operations in Chile (10.7%), Colombia (6.2%), Peru (19.5%) and Ecuador (18.9%).

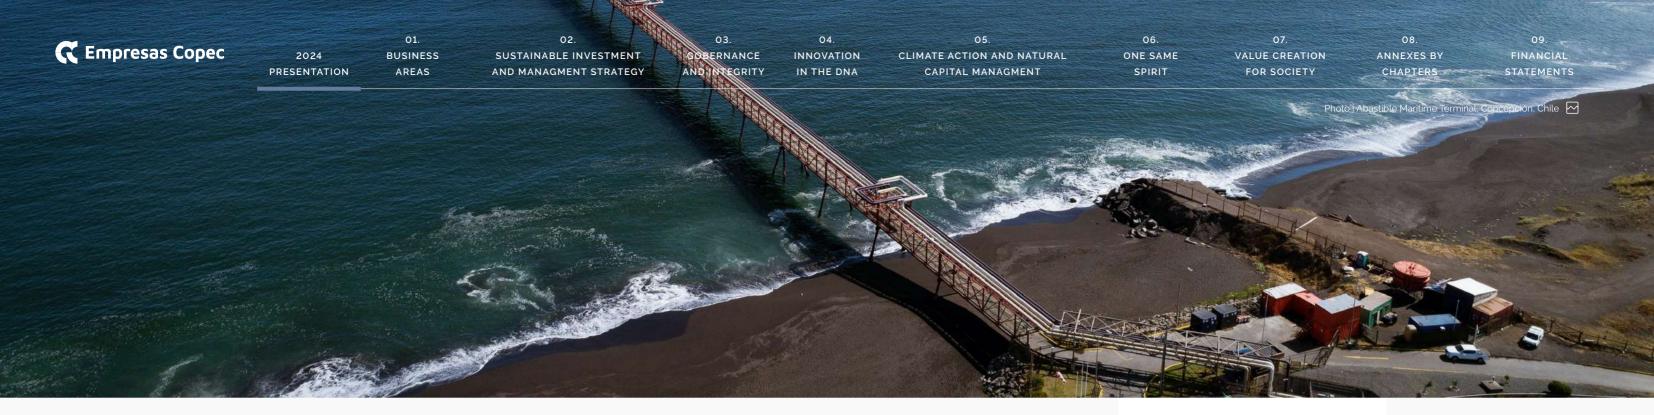

As of December 2024, volumes of liquified gas sold in Chile totaled 561,000 tons, 4.6% more than in 2023; in Colombia reached 252,000 tons, a year-on-year increase of 4.0%; in Peru they grew by 6.5%, reaching 507,000 tons, and in Ecuador rose by 8.1%, totaling 608,000 tons.

\rightarrow SONACOL

Profit amounted to Ch\$22.425 billion, higher than the Ch\$20.437 billion recorded at the end of 2023. This is explained by an increase in the operating income, as a result of higher volumes transported, offset by a drop in non-operating income. It should be noted that Sonacol is currently classified as an "asset held for sale" in Empresas Copec's balance sheet.

\rightarrow METROGAS

Metrogas reported a profit of Ch\$ 221.297 billion, which compares positively with the profit of Ch\$ 51.504 billion recorded at the end of 2023, which is mainly explained by favorable effects due to the restatement of the provision for lawsuits. Meanwhile, Agesa reported a profit of US\$ 114 million, higher than the US\$ 113 million recorded in the previous year.

→ PESQUERA IQUIQUE-GUANAYE (IGEMAR)

Igemar recorded a loss attributable to owners of the controlling company of US\$ 38 million, which compares unfavorably with the profit of US\$ 3.3 million reported during the previous year. There was a fall in both operating and non-operating income.

During the period, there were decreases of 4.0% in the prices of fishmeal, 5.4% in fish oil, and 24.4% in canned fish, while the price of frozen products increased 2.7%.

On the other hand, 11,400 tons of fish oil, 2,093 thousand boxes of canned fish, and 24,900 tons of frozen products were sold,

representing drops of 23.0%, 31.0% and 56.0%, respectively. Total processed fisheries reached 305,000 tons, 11.2% less than during 2023.

Regarding related companies, Corpesca posted a loss of US\$ 11.8 million, which compares positively with the loss of US\$ 12.8 million reported in the same period of the previous year. Caleta Vitor recorded a loss of US\$ 4.6 million, lower than the loss of US\$ 7.8 million in 2023.

→ ALXAR INTERNATIONAL

Alxar Internacional posted a profit of US\$ 139 million, which compares negatively with the profit of US\$ 165 million reported the previous year. This is explained by a drop in sales at Mina Justa, which decreased 7.9%, reaching 120 thousand tons of copper, with 87 thousand tons of concentrate and 33 thousand tons of cathodes. At the same time, the material treated was 16.5 million tons, higher than the 15.9 million tons reported the previous year. The average cash cost for the period was 1.5 US\$/lb, which represents an increase from the 1.4 US\$/lb of the previous year.

History⁽²⁾

90 years delivering value to stakeholders

NCG 461 (2.2) ⊙

4

Incorporation of the company and expansion of the energy business

Copec was incorporated as a company to market and distribute fuels in Chile. Years later, Abastible was born, focused on the marketing and distribution of liquified gas in Chile (1956), and Sonacol, with the goal of transporting liquid fuels through a network of pipelines (1957). Finally, it will be Metrogas' turn, the result of the work with other Chilean companies (1994). At present, through these companies, Empresas Copec is developing several projects in renewable energies, electromobility and electrification.

1970 1980

× 540°

Business diversification

The Company expands into other industries: forestry, fishing and mining. In 1979, ARAUCO was born, currently the third largest pulp producer in the world and the third largest manufacturer of panels. From the integration of the operational assets of the fishing industry, Corpesca is created in 1999.

Decades of development of the fishing and food business will lead to the consolidation of Nutrisco in 2022, whose goal is to capitalize on new food trends and investment opportunities at sea and offshore.

1989

Θ

Investment in education and innovation

With the creation of Fundación Educacional ARAUCO, the Company's commitment to education was established, especially in the regions where it operates. The new century will represent a milestone for innovation in Chile with the launch of the Fundación Copec-UC, a collaboration that 15 years later will deepen with the UC Anacleto Angelini Innovation Center. Today, the Company and its subsidiaries are active members of important education and innovation networks.

2000 2005

Consolidation and strategic focus

A corporate restructuring gives rise to Empresas Copec, a parent company with a strategic focus on energy, forestry and fishing businesses under one same vision of the future. The new subsidiary Copec is responsible for the distribution and marketing of liquid fuels and lubricants.

2005

Internationalization

ARAUCO positions itself as a global player, becoming the second-largest pulp producer in the world and the third-largest manufacturer of panels. Internationalization accelerates with the acquisition of Terpel, Colombia's leading fuel distributor. This will be followed by further investments and developments in Latin America, North America and, recently, Europe. In 2024 Abastible acquires Gasib, the liquified gas business in Spain and Portugal.

New purpose: Commitment to new generations

In 2021 Empresas Copec completes its exit from the coal mining business, while intensifying its copper operations with Mina Justa (Peru), a key metal for decarbonization. In 2023, the subsidiary Copec reveals its energy transition and business transformation strategy. For its part, the Company launches its new purpose in 2024, committing to the future and to the new generations.

Major milestones and awards

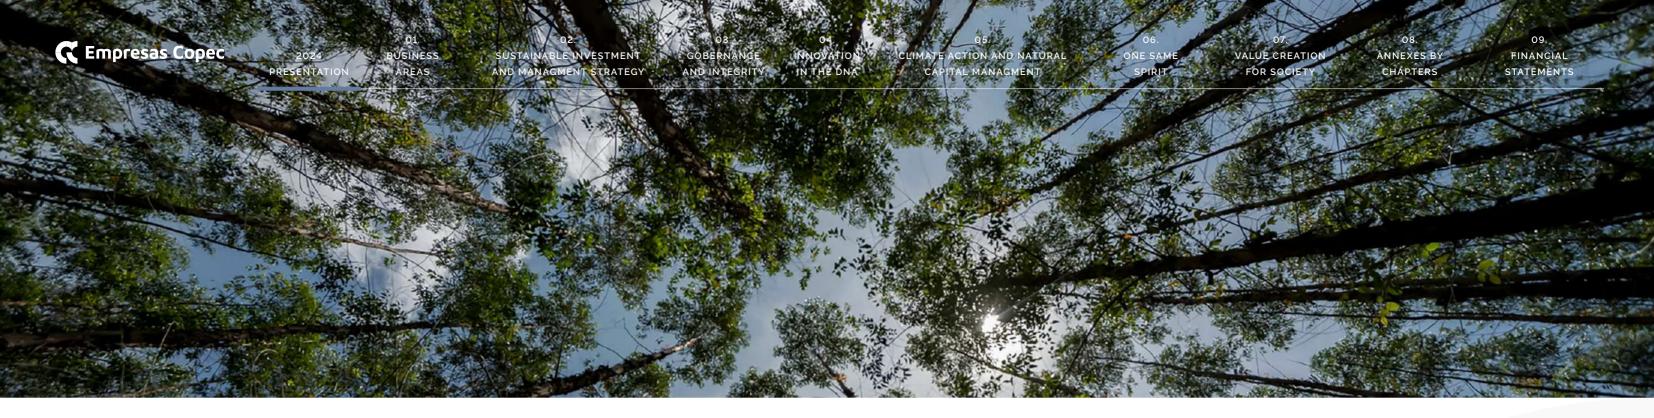

2024 milestones NCG 461 (2.2) ⊙

\rightarrow Investments and sustainable financing

- During the year, the Company issued bonds for a total of UF 9,200,000 in the local market, of which UF 4,000,000 corresponds to its first green bond.
- At Investor Day 2024, Eduardo Navarro, CEO of Empresas Copec, stressed
 that the holding company's growth focus will continue to be on natural resources and energy, leveraging the subsidiaries' competitive advantages, cost
 efficiencies and leadership in the markets where they participate.

Modernization of the forestry sector

\rightarrow Investments and sustainable financing

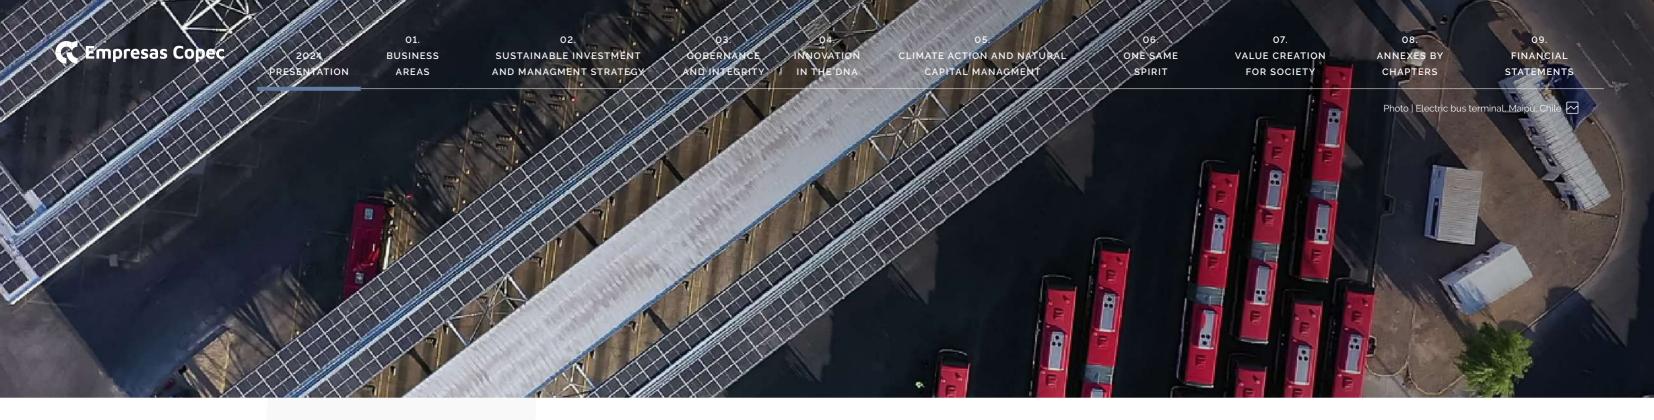

- a future pulp mill located in Mato Grosso do Sul, Brazil.
- ARAUCO issued sustainable bonds totaling UF 10,000,000 in the Chilean market.
- The sale of ARAUCO's forestry plantations in Paraná, Brazil, to pulp producer Klabin, for US\$1.168 billion, was completed. This amount will help strengthen the balance sheet for the Sucuriú project.

\rightarrow New products and services

• ARAUCO's Board of Directors approved the construction of the Sucuriú project, • Lemu Nge, an ARAUCO Ventures startup, put into orbit the first private Chilean satellite, designed to observe changes in the planet's biodiversity with a hyperspectral camera.

→ Transformation into a Nature Positive company

- Business for Nature endorsed ARAUCO's biodiversity strategy.
- ARAUCO executives participated as panelists at COP16 on Biodiversity.

\rightarrow *Electromobility*

- The subsidiary Copec began to develop the first Latin American network where users can leave the discharged battery of their electric motorcycle and take a charged one with them, starting in Chile and Colombia.
- The Valparaiso Bus Terminal was inaugurated, developed and built by the subsidiary Dhemax, which is also responsible for the load management and telemetry system.
- Copec Voltex was awarded 70% of the new charging infrastructure in the last bidding process for public transportation in Santiago, which will allow the construction of 14 new electroterminals that will supply 895 electric buses.
 In addition, it was awarded the first electroterminal outside the Metropolitan Region, in Concepción.

\rightarrow New energy and technology solutions

- Copec Flux reached 21 small means of distributed generation (PMGD for its acronym in Spanish) built, of which 15 are operational, injecting clean energy into the grid.
- Copec invested in Ineratec, a German startup that owns a technology that produces synthetic fuels with hydrogen and captured CO₂. It also invested in Optibus, an integral platform that optimizes public transportation systems.
- Copec completed the first import of renewable diesel in Chile, obtained from natural sources such as animal fat and vegetable oils.
- AbastibleTec debuted as a new subsidiary aimed at promoting renewable energies and efficient solutions.
- Abastible signed an agreement with electricity company Comasa to develop
 a project to produce ammonia from green hydrogen with the ultimate goal
 of producing carbon-neutral fertilizers.

\rightarrow New energy and technology solutions

- Copec acquired Granja Solar, a photovoltaic farm in the Tarapacá Region with an installed capacity of 123 MWp.
- Copec signed its first green loan for US\$ 200 million to finance new energy, electromobility and other projects associated with the energy transition.
- Abastible acquired Cepsa's liquified gas business in Spain and Portugal, thereby entering the European market for the first time.
- Colgas will build a new liquified gas storage facility in Cartagena, Colombia.

\rightarrow Focus on energy assets

 Terpel sold its subsidiary in Ecuador and assets in Peru for a total of US\$64 million. The divestment is due to the company's interest in focusing on the lubricants business in both countries.

Other investments to enhance sustainable development

\rightarrow New lines of business in the food sector

- Nutrisco acquired 80% of LiveMore SuperFoods, a California-based company
 The Sbarro pizza chain is present in Chile in three Pronto Copec that specializes in fruit smoothies.
- Nutrisco opened a sales office in Miami, USA, and another in Vigo, Spain, to strengthen its presence in North America, Europe and Asia.
- Orizon inaugurated its most recent production facility in Coronel, which also houses the new food innovation center for entrepreneurs in southern Chile.

\rightarrow Expansion and diversification of the convenience business

- stores: Príncipe de Gales, Lampa and Mostazal Poniente.
- Copec acquired 100% of the Chilean chain Streat Burger, with which it enters the fast casual fast food segment.
- The new physical card of the Copec Pay digital payment account made its debut in the market, adding more functionalities.

\rightarrow Other investments

• Blue Express sealed a venture capital investment in Reversso, a Chilean entrepreneurship dedicated to automating returns and product exchanges in e-commerce.

ANNEXES BY

• Las Salinas created the subsidiary Remedia Green Tech, focused on the remediation of contaminated soils.

Social value generation

\rightarrow Support for SMEs

- Abastible, together with BCI, Entel and Seguros Sura, created Corporación Grande Pyme, a nonprofit organization aimed at promoting the development of SMEs
- . Abastible began working with the Construyendo Mis Sueños corporation on a project that seeks to provide support and advice to SME suppliers or customers.

Leadership

At Empresas Copec we understand that being leaders is not only defined by being the first, but also by the positive impact we promote in people and the environment; by the creation of social value; by being governed under ethical principles and values, and by inspiring and moving others. Being a leader entails the great responsibility of being an example, being consistent, sharing convictions, thinking in the long term and being an engine of positive change. It is about leading the way towards sustainable development and being a reference in transformation, promoting innovative solutions that address the challenges of the present and the future. Good leadership opens doors, connects ideas and unites people around a common purpose. It involves courage to face challenges, empathy to understand the needs of others, and the conviction to make a significant and lasting impact for the benefit of society as a whole.

Forestry sector value chain GRI (2-6) ⊘

Responsible forest management

The management of forests and plantations is carried out under a certified forestry management scheme that prioritizes soil care, conservation and improvement of biodiversity, ecosystem balance and water protection. Ninety-one percent of ARAUCO's assets are certified under responsible forestry management standards. Twenty-nine percent of the Company's assets are native forest and protected areas.

Sustainable production

ARAUCO recognizes that environmental management in industrial processes is key, focusing its efforts on monitoring, continuous improvement and compliance with regulations, especially in the areas of odors, liquid and solid waste, and atmospheric emissions. ARAUCO's forestry operations and activities adhere to certification systems that comply with international sustainability, quality and safety standards and regulations, such as ISO 14001, ISO 9001 and/or ISO 45001.

ARAUCO knows the origin of all the wood and pulp it uses, thanks

Reduction of CO₂ emissions

ARAUCO was the first forestry company to be certified as carbon neutral. Trees absorb carbon and wood products store it in infrastructure for long periods. The company develops a wide range of products and sustainable alternatives from a renewable resource such as wood, with positive impacts on the paper, apparel, construction and packaging industries.

Product traceability

to the implementation of traceability systems. ARAUCO's products come only from established plantations. The wood is converted into paper and cardboard, sawn timber, panels and engineering products, which are 100% made from renewable raw materials.

Community impact

ARAUCO delivers social value through the prioritization of ecosystem services, dialogue, participation and socio-economic development that generates opportunities in the communities neighboring its operations.

Through Bioforest, several initiatives and scientific projects are developed, seeking to increase and improve knowledge about ecosystems, which are applied in biotechnology and pulp laboratories, greenhouses, forestry assets and industrial plants.

3/2

Hydrological and erosion benefits

Forests and plantations are not irrigated and play a crucial role in influencing the quantity and quality of available water and regulating its surface and groundwater flows. They also help to reduce erosion, favoring runoff and infiltration into groundwater.

ARAUCO was the first Chilean forestry company to issue carbon credits thanks to its biomass cogeneration plants, which allow it to be self-sufficient and produce a surplus of 436 MWh for the electricity system. In 2024, 87% of the energy supplied by ARAUCO came from renewable energy.

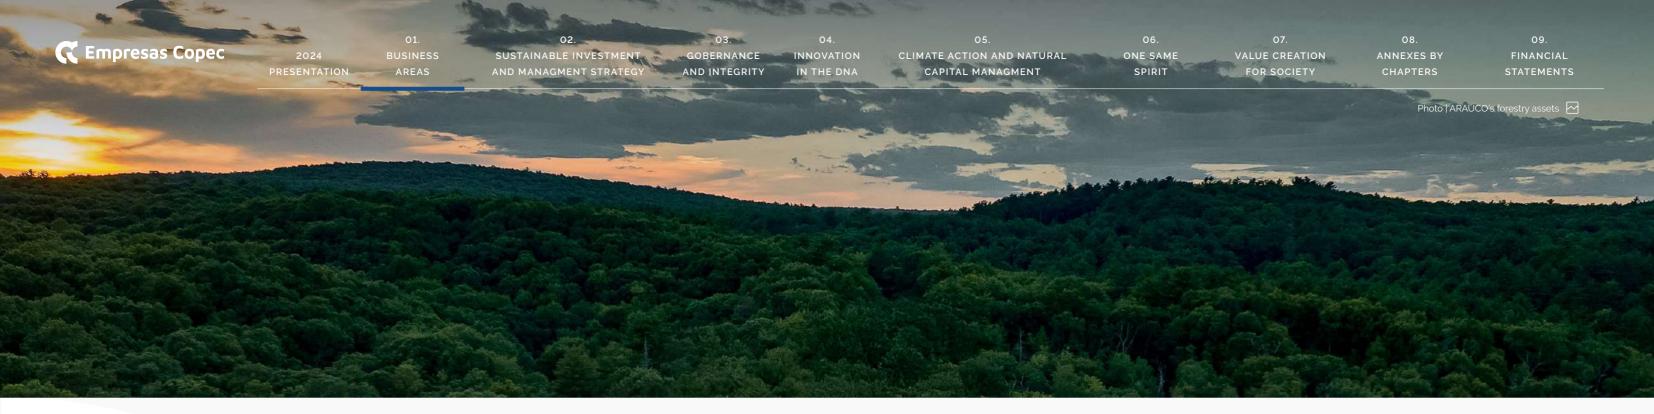

ARAUCO and subsidiaries

ARAUCO is one of the world's leading forestry companies, both in area and yield of its plantations, as well as its pulp, timber and panel production capacity. It has a presence on five continents, in the forestry, pulp, timber, panel, and clean and renewable energy sectors, reaching almost 4,000 customers around the world.

Its products are part of a value chain for the paper, apparel, construction, packaging, furniture and energy industries. These are marketed to points of sale through representatives, agents and sales offices in 28 countries. The logistics and supply chain to distribution centers and points of sale is managed through 193 ports.

→ Forestry

ARAUCO has one of the most extensive forestry assets in South America, managed under responsible management practices, with production processes certified by the most demanding environmental, social and economic standards in the world.

\rightarrow Pulp

The company produces pulp, the basic raw material for the manufacture of several types of printing and writing papers, tissue paper, packaging paper, filters, fiber cement products, cloths, diapers and hygiene products, among others.

→ Timber production

ARAUCO manufactures a wide variety of sawn timber, plywood, fiberboard, particleboard, remanufactured timber and moldings with different degrees of finish, appearance and value-added processes for architecture, design, construction, packaging and remodeling.

→ Complementary energy operations

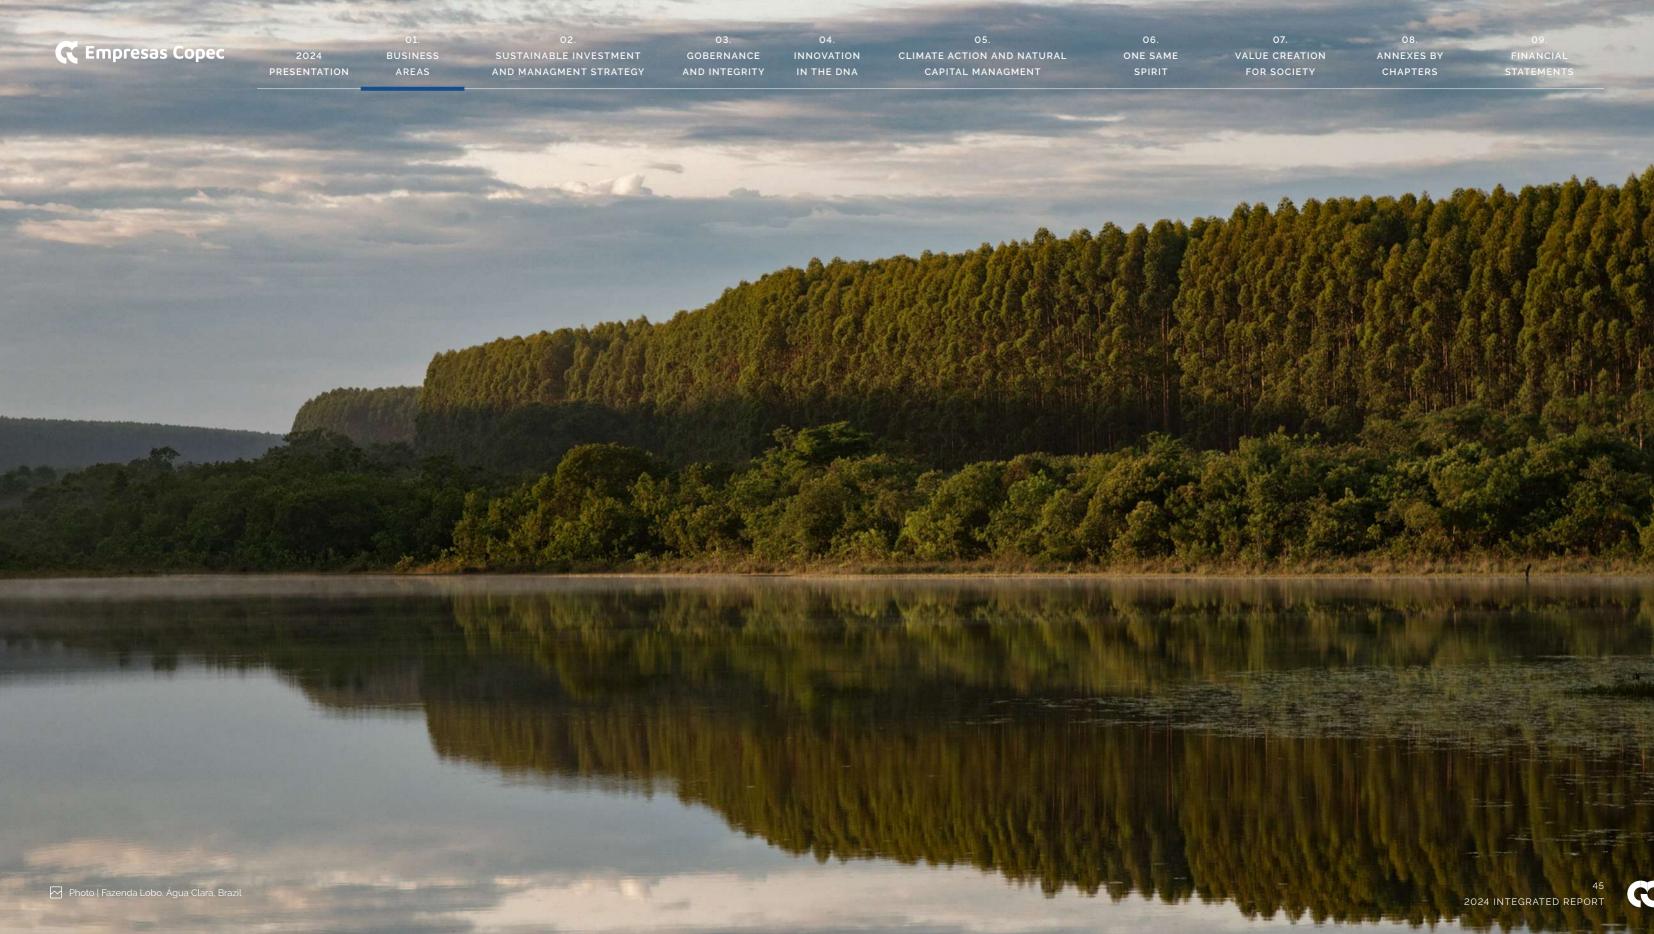

For more than 20 years, the company has been producing non-conventional renewable energy (NCRE) from forest biomass, which is considered a clean, safe, efficient and low-emission source. Through its generation, the company is self-sufficient and also contributes the surplus from its industrial plants to the energy matrices of Chile, Argentina and Uruguay, being one of the main generators of NCRE in Chile.

RELEVANT FIGURES

- 1.7 million hectares of forestry assets in Chile, Argentina, Brazil and Uruguay
- 29% are native forest and protection and conservation areas of high social and environmental value.
- 114.2 million trees planted in Chile, Argentina, Brazil and Uruguay in 2024
- 25.8 million m³ of logs and chips were destined for plants
- 18.7 million m³ of logs and chips harvested
- The total standing timber inventory for the year is 162.3 million m³

FINANCIAL
STATEMENTS

Energy sector value chain GRI (2-6) ⊘

1 Supply, storage, distribution and marketing of fuels

- → Copec's products, such as gasoline, diesel and domestic kerosene, are stored in plants and distributed by tank trucks to gas stations and industrial customers. Lubricants are sent to distribution centers for subsequent transport in trucks, and aviation fuel is shipped through pipelines.
- → Abastible stores liquified gas in high-capacity tanks and transports it primarily to the bottling plants by trucks and pipelines.

Extensive physical network and digital channel

- → Copec has expanded the offerings in its network of convenience stores and has implemented digital solutions for customers and companies in Chile and, through Terpel, in Colombia, Ecuador, Panama, Peru and the Dominican Republic.
- → Abastible has an extensive liquified gas distribution and marketing network in Chile. It also markets it in Colombia, Peru, Ecuador, Spain and Portugal through its subsidiaries Colgas, Solgas, Duragas and Gasib, respectively.

Energy intelligence solutions

- → Copec offers several energy solutions to residential, real estate and business customers, including electric chargers, photovoltaic panels, smart batteries, storage software and energy injection, among others.
- → Abastible and its subsidiaries provide comprehensive consulting services that optimize its customers' production processes by offering solutions that reduce energy costs and pollutant emissions, as well as lower maintenance costs and increase process productivity.

Innovation and emerging developments

Copec has Wind Garage and Wind Ventures, a space and investment fund to generate, incubate and scale new ideas and projects in the areas of mobility, energy and artificial intelligence, speeding their implementation in Latin America.

Benefits of energy intelligence for customers

- → **Decarbonization**: adoption of renewable energies.
- → **Decentralization**: transformation of the consumer into a prosumer, capable of producing his own energy.
- → **Digitalization**: use of technologies such as AI and big data for a better use of natural and technological resources.

Composed of workers, dealers, attendants, carriers, drivers, distributors, contractors and suppliers, it is the main support for the business, since they are partners and strategic allies to deliver a value offer to customers, promoting excellence and quality of service.

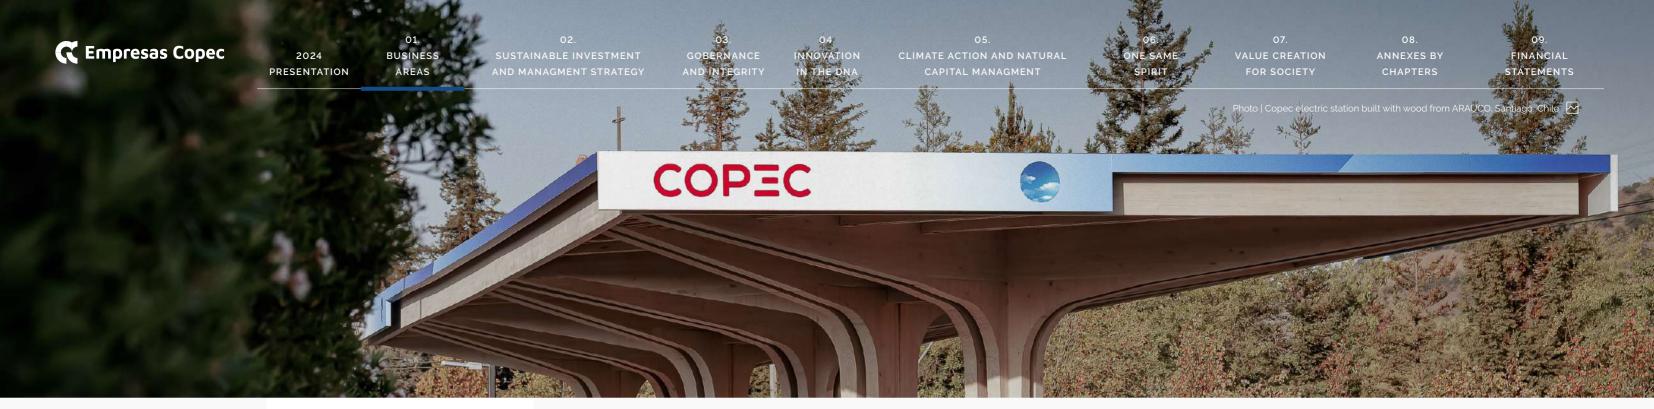

Extended team

Copec and Abastible are citizen brands committed to generating positive impacts in the communities where they operate, as a driving force for entrepreneurship, generation of opportunities and improvement of the quality of life.

9

Copec and subsidiaries

With 90 years of history, Copec develops and delivers products, services, solutions and experiences that meet the needs of life on the move. It markets and distributes fuels and lubricants through its network of service stations. It also sells products in convenience stores and digital channels, provides electric charging services and markets renewable energies. The company is present in Chile through Copec and, with its subsidiary Terpel, in Colombia, Panama, Ecuador, the Dominican Republic and Peru.

COPEC'S CONSOLIDATED REVENUES MILLION DOLLARS

\rightarrow Copec

The company sells and distributes fuels and lubricants from Arica to Puerto Williams through the most extensive network of gas stations in Chile. It also has the exclusive distribution of the Mobil brand on the Pacific coast of South America and has consolidated its position as the main supplier of fuels and lubricants to the Chilean mining industry.

RELEVANT FIGURES

- 10.9 million m³ in physical fuel sales in Chile in 2024, 1.1% less than the previous year
- 58.8% market share in physical fuel sales
- 6.5 million m³ in sales through the dealer channel in 2024, 3.1% more than the previous year
- 4.4 million m³ in sales through the industrial channel in 2024, 6.7% less than the previous year
- 101.4 million m³ in sales in the lubricants market during 2024, 2.8% less than the previous year
- 45.6% share in the lubricant market

→ Terpel

Terpel markets and distributes liquid fuels and lubricants in Colombia, Peru, Panama, Ecuador and the Dominican Republic, and natural gas for vehicles in the first two countries. In Colombia, Panama, Peru and the Dominican Republic, it is a major player in the operation and marketing of aviation fuel. Its purpose is to promote and mobilize people, the company and the country.

- 11.3 million m³ of liquid fuels in sales through service stations and industrial customers in 2024, 2.8% less than the previous year
- 223 thousand m³ in natural gas for vehicle sales in 2024, 0.3% less than the previous year
- 26.7 million barrels in lubricant sales in 2024, 3.3% more than the previous year

→ Arcoprime

With presence from Arica to Punta Arenas, Arcoprime is the largest convenience store in Chile with its Pronto and Punto Copec brands. Its value proposition is based on offering an agile and differentiating experience, with quality products and services designed to sustainably address the needs of consumers. Through its subsidiary Arco Alimentos, it produces and distributes high-quality packaged food in the bakery and grab and go categories.

→ New solutions and energies

Through Copec Voltex, Copec Flux, Copec Emoac, Copec Renovables, Ampere Energy and Dhemax, the company offers several energy solutions to residential, commercial and industrial customers. These include smart batteries, electric chargers, photovoltaic panels, energy storage and injection software, among others.

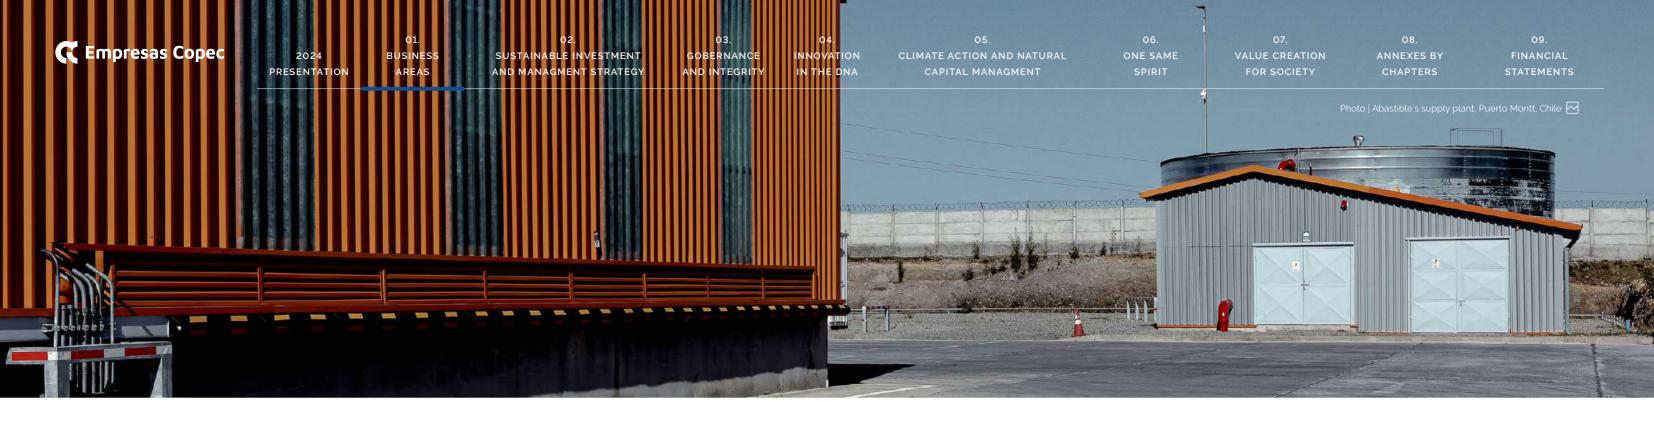

In addition, the company builds photovoltaic plants PMGD⁽⁶⁾, in line with its commitment to the energy transition. In this regard, in 2024 it purchased a large-scale solar generation park, "La Granja", located in the municipality of Pozo Almonte, Tarapacá Region, with an area of 322 hectares and 336,000 panels.

Likewise, it offers a series of mobility and convenience services and solutions, both in the city and on the road, through convenience stores outside service stations and product and service home delivery. Blue Express Copec also offers last-mile logistics solutions and, through Copec Pay, the company has its own digital wallet.

Abastible and subsidiaries

In Chile, Abastible leads in the commercialization of liquified gas for domestic, commercial and industrial use. It also offers comprehensive energy solutions with state-of-the-art technology for the most diverse industries, thus promoting energy efficiency and environmental protection. It also markets liquified gas in Colombia, Peru, Ecuador, Spain and Portugal through its subsidiaries Colgas, Solgas, Duragas and Gasib, respectively. Through the new subsidiary AbastibleTec, it provides cutting-edge solutions for the energy transition.

→ Abastible Chile

Through the largest network of distributors nationwide and a solid presence in the territory, Abastible satisfies several liquified gas needs in homes, industries and businesses. It also offers home services and value-added energy solutions, using environmentally friendly technology in domestic and industrial processes.

RELEVANT FIGURES

- 561,000 tons in physical sales in 2024, 4.6% more than in the previous year
- 38.3% market share, 0.3 percentage points higher than in the previous year

\rightarrow Colgas

The company markets liquified gas for residential and industrial use in Colombia. It also participates in the development of energy solutions, manufactures and markets cylinders and storage tanks through the company Cinsa, and transports bottled and bulk liquified gas in trucks through the company Cotranscol.

- 252,000 tons in physical sales in 2024, 4% more than the previous year
- 34.3% market share, 0.1 percentage points less than in the previous year

→ Duragas

It markets liquified gas for residential, industrial and vehicle use in Ecuador, covering 18 of the country's 24 provinces.

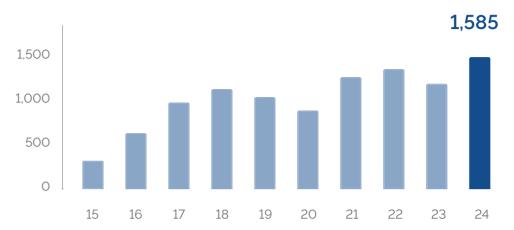

- 608,000 tons in physical sales in 2024,
 8.1% more than the previous year
- 41.0% market share, 0.4 percentage points higher than in the previous year

\rightarrow Solgas

It markets liquified gas for residential, industrial and automotive use in Peru, and is one of the largest distributors in that country.

- 507,000 tons in physical sales in 2024,
 6.5% more than the previous year
- 23.1% market share, 0.4 percentage points higher than in the previous year

ABASTIBLE'S CONSOLIDATED REVENUES MILLION DOLLARS

→ AbastibleTec

It seeks to be a leading player in the energy transition, mobilizing the different industries towards a sustainable future, by offering clean solutions with added value that reduce polluting emissions and energy and maintenance costs while increasing process productivity.

To date, close to 250 energy solutions projects have been implemented, including the replacement of thermal equipment and the implementation of renewable energies, electric mobility, among other solutions focused on industries that are relevant to the country, such as salmon farming and mining.

→ Gasib

In 2024, Abastible agreed to purchase Compañía Española de Petróleos' (Cepsa) liquified gas business in Spain and Portugal, Gasib, for approximately €275 million through a share purchase agreement.

Abastible will continue to use the Cepsa brand in the commercialization of products and services in the Iberian Peninsula, in addition to having a long-term liquified gas supply contract with the company.

Gasib Spain is the main player in the unregulated bottled liquified gas business in that country, and Gasib Portugal is the fifth largest company in the business, in terms of market share, in that country.

Sonacol

The company transports gasoline, domestic and aviation ker- • A line on the Maipú-Airport section, to mobilize aviation osene, diesel oil and liquified gas through a 465 km pipeline network located in the Valparaíso, O'Higgins and Metropolitan regions:

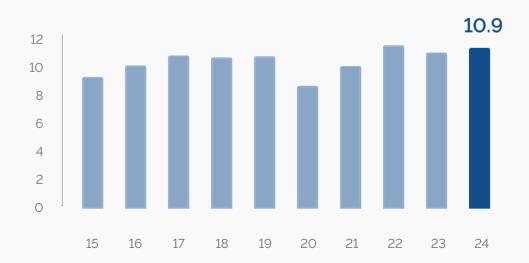

- Two lines on the Quintero-Concón section, one dedicated to transporting liquified gas and the other for gasoline, diesel and aviation and domestic kerosene.
- Two lines on the Concón-Maipú section, for the same services.
- A line for the San Fernando-Maipú section, for the transport of clean products and equipped to operate bi-directionally.

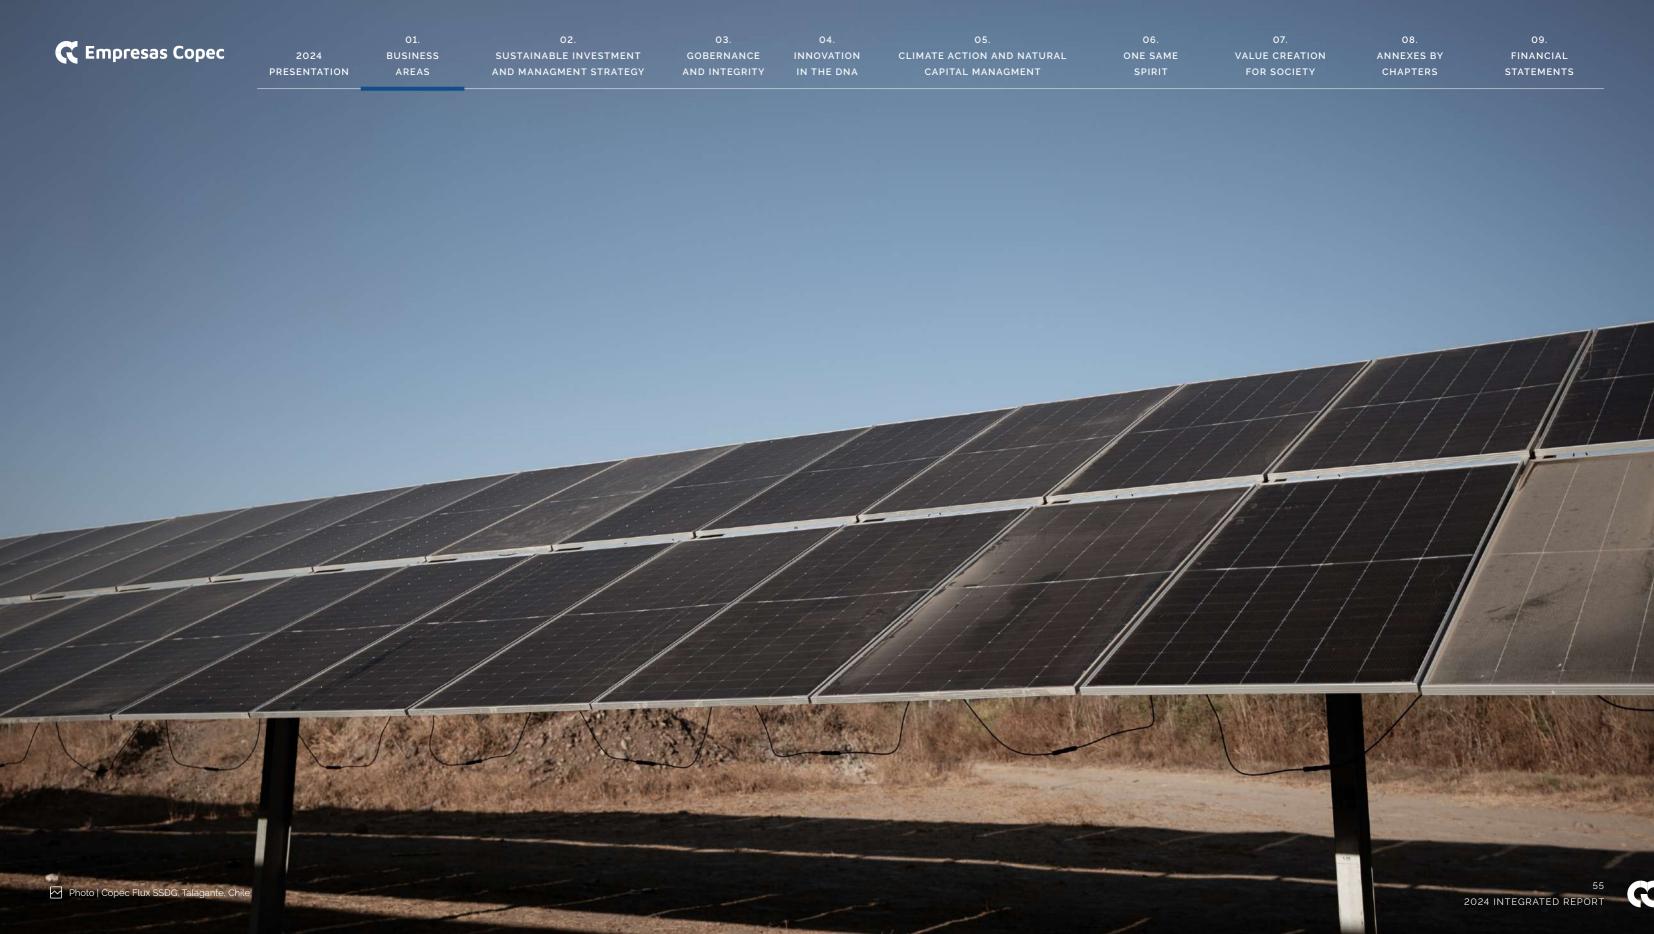

kerosene.

It also has nine pumping stations, a product delivery terminal and a dispatch center, infrastructure supported by state-ofthe-art technology.

Sonacol transports 98% of the fuels in the Metropolitan Region and offers the best alternative for transporting products between storage plants and refineries. Its most important customers are Abastible, Copec, Enex, ERSA Aconcagua, Gasco and Lipigas, among others.

Food sector value chain GRI (2-6) ⊖

1

Innovative, sustainable and affordable food production

→ Nutrisco seeks to generate a positive impact on people's quality of life, innovating in the way food is made and developing better, accessible and quality products. With a firm commitment to sustainability, it promotes responsible practices that favor the wellbeing of both people and the planet.

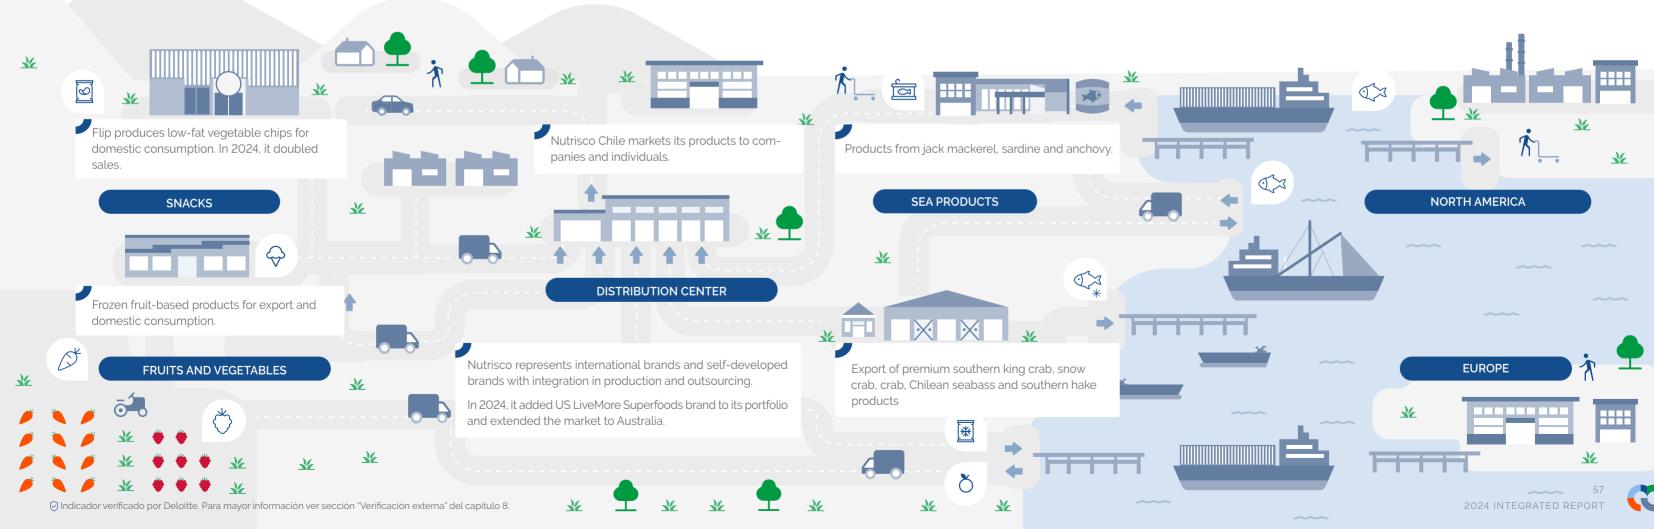

Sustainable supply

→ The company works to develop a sustainable supply chain that minimizes environmental impacts, promotes ethical practices, and supports the development of supplier communities. By working collaboratively with artisanal fishermen and berry and vegetable farmers in different regions in Chile, it ensures a quality supply while boosting local economic development. This strategic relationship not only strengthens its expansion plan, but also contributes to the well-being and growth of the communities.

Quality and safety standards

→ Nutrisco guarantees high quality and safety standards through constant innovation and continuous improvement of its processes. It promotes certifications and information transparency, so that each product that reaches the consumer complies with rigorous safety and quality controls. This approach guarantees fresh and safe products, aligned with the company's sustainability values.

Nutrisco and subsidiaries

Nutrisco has set out to lead the food business by identifying new trends and investment opportunities that translate into innovative nutrition solutions for consumers.

To this end, the company creates, produces and markets multiple products for human and animal feed. It exports to more than 60 countries, through 50,000 points of sale. In Chile, it has over 6,000 customers and 100,000 points of sale covered directly and indirectly. In 2024, it strengthened its sales office in the United States and created one in Europe.

As of September 2024, Nutrisco consolidated its businesses into a single company, in response to a strategy aimed at putting the customer at the center. The company is now structured around three major business units: Seafood, Fruits and Vegetables, and Snacks.

→ Seafood products

This unit comprises the businesses formerly carried out by Orizon Seafood and Fiordosur, which include:

- The extraction, freezing, preservation, processing, manufacturing and marketing
 of seafood for human and animal consumption and industrial application, and
 the processing and export of premium seafood products such as cod (Chilean
 seabass), southern king crab, snow crab, portioned salmon and crab.
- It has a fleet of seven fishing vessels, with a total fishing capacity of more than 9,000 m³, and processing plants in southern Chile.

RELEVANT FIGURES

- 305,000 tons of fish processed in 2024
- \bullet 68% from own fishing and 32% from artisanal fishing
- 24% of industrial catches in the center-south zone
- 96,000 tons of artisanal fishing
- 55,000 tons of fish meal production in 2024, 3.0% less than in 2023.
- 12,000 tons of fish oil production in 2024, 28% less than last year
- 2.6 million cases of canned food production in 2024, 19% more than in the previous year
- 33,000 tons of frozen products in 2024,
 41% less than the previous year

→ Fruits and Vegetables

This unit is composed of Valle Frío, which markets frozen fruit to retailers and private labels. It exports to the main retail and food service chains in the world, such as Walmart, Picard, Amazon, Meijer, Trader Joe's, Food Lion, CVS, Pão de Açúcar, Cencosud and Costco, among others.

In 2024 Nutrisco acquired the LiveMore Superfoods brand in the United States, which sells frozen fruit mixes in several formats, including innovative smoothie mixes, with a presence in several supermarket chains. Its products are part of the functional food trend, which has a great commercial projection.

31,000 tons of fruit production in 2024,
 46% more than the previous year

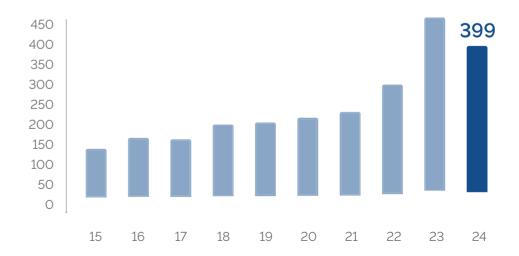

→ Snacks

This business unit includes Flip, a brand of low-oil vegetable chips, whose formula was created by Pedro Bouchon, Vice Rector of Research at the Pontificia Universidad Católica de Chile (PUC), as part of a project co-financed by Fundación Copec-UC. Today the company belongs to Nutrisco and PUC's Dictuc, and has an industrial-scale plant in Santiago.

In 2024, the packaging and value proposition were redesigned, in addition to expanding the marketing points, which now include Walmart and Cencosud.

• 19,000 cases sold in 2024, 138% more than the previous year

NUTRISCO CONSOLIDATED REVENUE MILLION DOLLARS

Alxar

Alxar is a subsidiary that sustainably manages mining operations and projects, with recognized standards of excellence.

In July 2024, the subsidiary Inversiones Alxar signed an agreement to sell its mining project Compañía Minera Sierra Norte S.A. to Capstone Copper Corp. for US\$40,000,000.

Through Alxar Internacional, it has a 40% ownership interest in Cumbres Andinas, owner of Marcobre, which in turn owns Mina Justa.

Mina Justa is an open-pit copper deposit located in the Ica region of Peru, from which ore is extracted and processed, with an average production of 100,000 tons of concentrate and 34,000 tons of cathodes.

RELEVANT FIGURES

- 120,000 tons of copper sales extracted from Mina Justa in 2024, 16% less than the previous year
- 33 tons of concentrate sold
- 87 tons of cathode sold

Las Salinas

The objective of Las Salinas is to clean up a 16-hectare site located on the coast in Viña del Mar, where fuel and lubricant storage and distribution plants were formerly located. It will use the bioremediation technique, a method that accelerates the natural process of hydrocarbon degradation through microorganisms present in the soil.

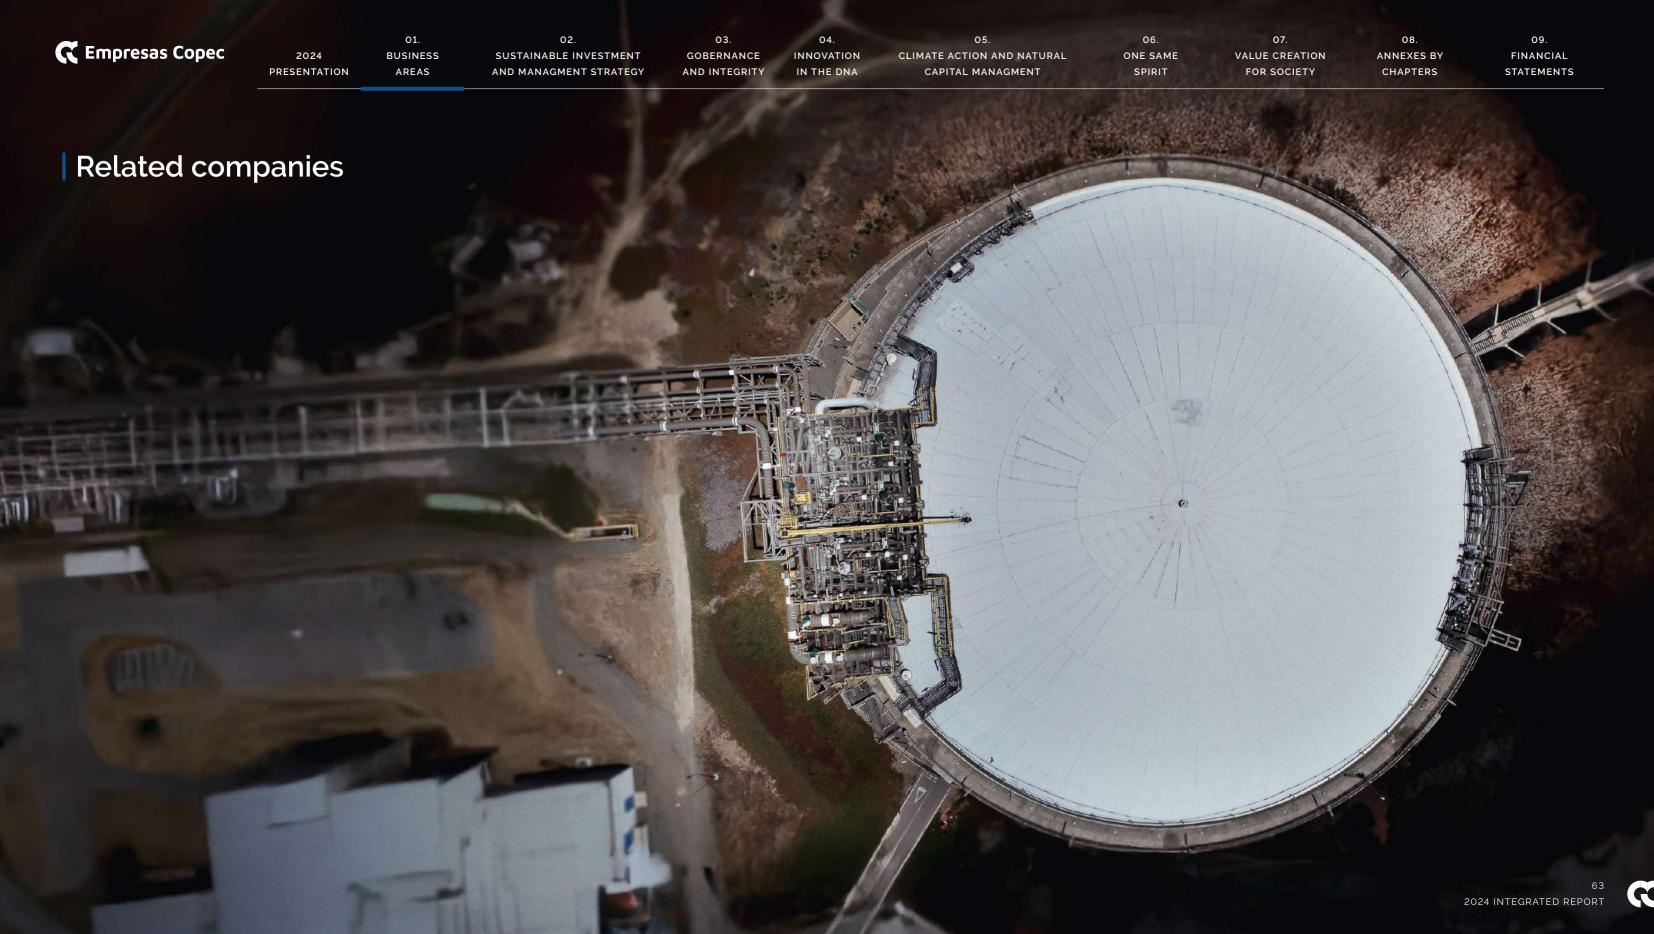

The aim is to enable urban development that is environmentally responsible, sustainable over time, and adds value to the city and its inhabitants. With this goal in mind, it is working to establish a dialogue with the authorities and the community in order to jointly build the urban design of the area.

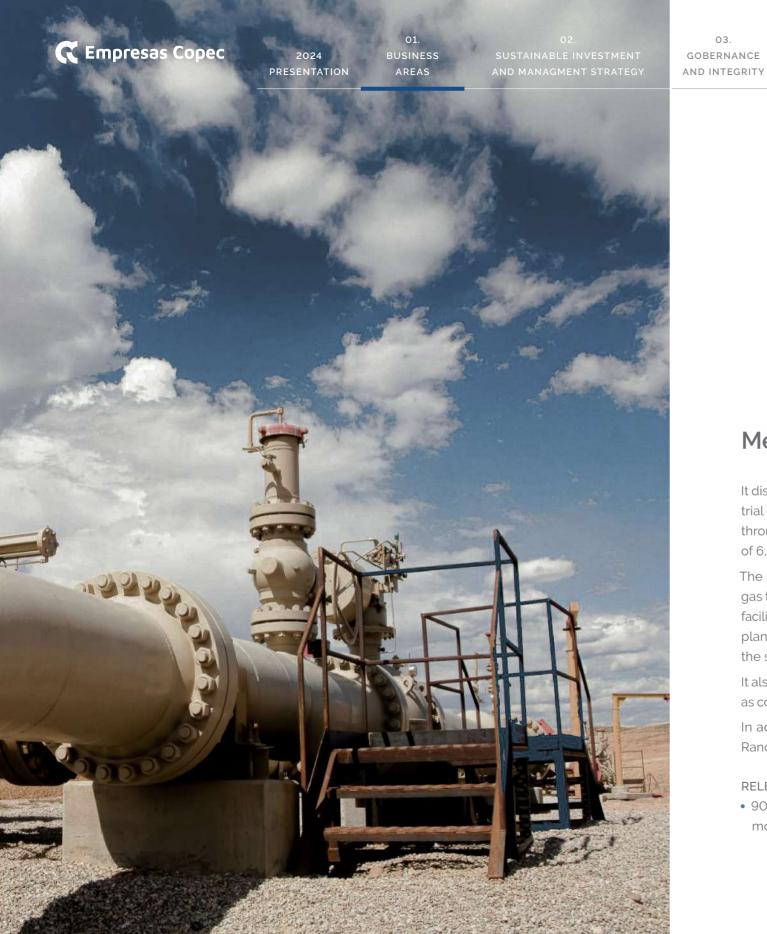

The company is currently preparing for the implementation of bioremediation, which has a five-year time horizon.

→ Remedia Green Tech

This company was created under the wing of Las Salinas, focused on the remediation of contaminated soils, based on the experience acquired in the bioremediation project of the Las Salinas site.

It is focused on three lines of business: the sustainable transformation of land with real estate potential, industrial land consulting, and environmental remediation of the mining sector.

Metrogas

INNOVATION

IN THE DNA

03.

It distributes natural gas for residential, commercial and industrial use in the Metropolitan, O'Higgins and Los Lagos regions, through a distribution network that reaches a total coverage of 6,100 kilometers.

CLIMATE ACTION AND NATURAL

CAPITAL MANAGMENT

The company operates virtual pipelines, which allow natural gas to be transported in liquid form in trucks from the loading facility of the GNL Quintero terminal to the satellite regasification plants, and then delivered to the several customers through the supply network.

It also offers energy solutions for its industrial customers, such as cogeneration, trigeneration and natural gas vehicle systems. In addition, it has four service centers located in Santiago, Rancagua, Osorno and Puerto Montt.

RELEVANT FIGURES

• 907,000 customers supplied in 2024, 3.0% more than in the previous year.

Agesa

FINANCIAL

STATEMENTS

Corpesca

It is one of the largest industrial fishing companies in Chile. It manufactures and markets fishmeal and fish oil, establishing itself as a global producer of seafood protein.

Its activities are concentrated in the northern part of the country, with fishmeal and fish oil plants in Arica, Iquique and Mejillones. It also has a storage and distribution terminal in Puerto Montt.

It currently operates a fleet of seven deep-sea fishing vessels, with a total operating storage capacity of 3,410 cubic meters in total.

→ Caleta Vitor

It participates in companies engaged in non-fishing businesses related to the production of animal protein meals, the aquaculture production of rainbow trout and the distribution, logistics and marketing of proteins and oils of marine, animal and vegetable origin.

Golden Omega

centrates, with up to 75% of eicosapentaenoic acid (EPA) and docosahexaenoic acid (DHA). These are obtained from fish oil using patented purification and concentration technologies for export to the global nutraceutical market.

Golden Omega markets its products in 42 countries on five continents. The main destinations for Omega 3 concentrates are the United States, Europe and South Korea. Omega 3 compressible powders are exported to the United States and Europe, and by-products are sold in Chile, China and India.

It has an industrial complex in Arica, with the capacity to man- The company holds the Marin Trust, Friend of the Sea and Dolphin ufacture up to 2,400 tons per year of Omega 3 fatty acid con- Safe certifications, related to the sustainable and responsible use of fishery resources; Orivo, which certifies the authenticity of a marine ingredient regarding its species and geographic origin; Green-e, which certifies that all the electrical energy used in the plant comes from renewable energy sources; Halal, related to Islamic law; Good Manufacturing Practices (GMP) for food supplements; regarding the packaging and distribution of food supplements; and IFOS, associated with product quality. Since 2023, it operates the first seawater desalination plant in Arica, with a capacity to generate around 1,000 m³/h of

desalinated water. This ensures continuity of supply for the operation and reduces the supply consumption from the potable water network.

In 2024, it entered into an alliance with Benexia for the commercialization of chia seed oil in North America. Through this partnership, Golden Omega will add a new vegan and natural Omega 3 oil to its product portfolio.

Long term

Adopting a long-term vision means looking beyond immediate urgencies and acting with awareness of the impact our decisions will have on the future. It means building with patience, perseverance and a genuine commitment to sustainable development, prioritizing lasting well-being over solutions based on simple reasoning focused solely on the immediate. The long term invites us to reflect and plan with a perspective that spans generations, which means betting strongly on innovation, sustainability and respect for the environment. It is, in essence, the conviction that progress is measured in decades.

Corporate strategy

04.

INNOVATION

IN THE DNA

03.

Empresas Copec is an investment holding company that seeks to create value for its shareholders and society, aiming at the sustainable development of the business areas in which it invests. It has set out to lead in high-potential sectors, with a long-term innovative vision that guarantees solid competitive advantages and ensures that it maintains an adequate capital structure, in line with the economic cycles that impact the business and the nature of each industry.

07.

VALUE CREATION

FOR SOCIETY

In 2024 it reached important achievements, led by the presentation of the corporate purpose at the Ordinary Shareholders' Meeting, the result of a reflective work that unfolded during 2023. This statement of principles on Empresas Copec's reason for being opens a path towards the future, indicating where to concentrate efforts. It is also a fundamental criterion for selecting investment opportunities and the prospective activities it

In addition, it was a year in which major investments in production units were consolidated. This is the case of MAPA, ARAUCO's mill modernization and expansion project, which completed its start-up phase, increasing pulp production capacity by 31%.

08.

ANNEXES BY

CHAPTERS

09.

FINANCIAL

STATEMENTS

There were also important investment announcements, such as ARAUCO's future pulp mill in Mato Grosso do Sul, Brazil, and innovative acquisitions, such as the acquisition of Granja Solar in Chile, by Copec, and of Gasib in Spain and Portugal, by Abastible, which also created a new subsidiary for renewable energy solutions: AbastibleTec.

The foundation of all these investments is corporate purpose, as they all aim to shape the world for future generations, and share certain characteristics and cross-cutting objectives:

→ Promoting the sustainable development of subsidiaries

Empresas Copec's investments are aimed at promoting the development of each of its business lines to make them increasingly sustainable and aligned with the needs of its customers and stakeholders.

FINANCIAL

STATEMENTS

→ Long-term vision⁽¹⁾

The corporate strategy is oriented to the long term. Therefore, it ensures the profitability of the business through a sustainable and efficient management of its capital, which also generates positive impacts on the environment. The large investments made by Empresas Copec do not seek an immediate return, but the creation of lasting value, which is built on scientific knowledge and expert studies. For example, forestry plantations require years to begin to bear fruit; Copec invests today in cargo terminals with the electromobility of tomorrow in mind, and Wind Ventures' investments in startups aim to build businesses that will reach their full potential in the next decade. This corporate value is transversal and resonates with the needs of the country and the world.

Another example of Empresas Copec's long-range vision is the work carried out by the Strategy and Development Department which is constantly preparing trend studies and sounding out social and technological changes that may open up business opportunities or become threats.

→ A diversified holding company with clear focuses

Over time, Empresas Copec has positioned itself as a diversified holding company, within a specific range of areas that it knows well, in which it has competitive advantages, a significant track record and an ambitious projection. Its strategy and investments are aimed at building and maintaining leading positions mainly in the natural resources and energy sectors. In this line, it seeks to strengthen the value creation capacity of existing businesses and analyzes opportunities to enter new markets

and industries that are opportunities in areas of action known to Empresas Copec and its subsidiaries, and/or have relevant complementarities or synergies with current activities, with good prospects of financial return and generation of economic, environmental and social value.

→ Overseas growth and local expansion

Empresas Copec aims to grow its business and has therefore made significant investments in Chile in recent years, expanding its local production base and its relevance in this market. In this way, Copec and Abastible already enjoy a prominent position in the Chilean energy sector. In the case of ARAUCO, the availability of forestry land has imposed new challenges in the local market. Both realities have prompted the Company to make investments in other countries, such as Brazil and Spain.

Likewise, Empresas Copec is also committed to the development of the countries where it operates, driving the evolution of its businesses so that they contribute to meeting the emerging needs of each market, such as, for example, the challenges of the energy transition. For this sector, it is expanding its offering with products and services designed to support customers in the transformation of their energy matrices, while in the forestry sector it has embarked on the manufacture of new products for sustainable construction. The ultimate goal is to offer, rather than specific products, solutions to customers in all the countries where its subsidiaries operate, striving to build lasting relationships that will evolve over time.

Sustainable investment and management model of Empresas Copec and its subsidiaries

For Empresas Copec it is important that the development of its subsidiaries and the companies in which it participates is carried out under sustainable management principles that ensure environmental care and social and economic value creation for its different stakeholders. This implies fostering a culture of good practices in all dimensions of the activity.

To this end, it developed a sustainable investment and management model that summarizes its strategic goals and, at the same time, includes commitments and indicators aligned with different global standards, including the United Nations Sustainable Development Goals (SDGs).

Sustainable financing

Empresas Copec has a financing policy aimed at meeting the criteria of financial soundness, optimal allocation of capital and strategic matching of cash flows. In this way, it ensures the continuity of the business in the long term, an appropriate capital structure and sustained growth over time, which ultimately maximizes its value.

In 2024 the Company published a Sustainable Finance Framework, which establishes guidelines for the issuance of financial instruments aligned with leading international standards⁽²⁾. Sustainable Fitch gave a Second Party Opinion (SPO), rating the alignment of the framework as "good". This allows Empresas Copec and its subsidiaries to access funds through the placement of bonds and other sustainable financial instruments. In addition, it contemplates a diversified portfolio of 16 project categories, including both environmental and social initiatives. Among the material facts of 2024 in this area, the bond issues conducted by Empresas Copec in Chile stand out, proof of the reactivation of the local market and the confidence that the Company awakens in investors. In all transactions, favorable conditions were obtained, with some of the record rates and spreads of the year in the local market.

→ UF 1.500.000 bond

In May 2024, it issued bonds for the equivalent of approximately US\$ 59 million. Demand exceeded the amount offered by 2.7 times. The papers were structured under the AC series, with a seven-year term and a placement rate of 3.86%. The proceeds will be used 100% to refinance short and long-term liabilities of the company and its subsidiaries.

→ UF 1.200.000 bond

In June 2024, it issued a bond for approximately US\$ 48 million. Demand was more than 2.5 times the amount offered. The papers, corresponding to the AD series and maturing in nine years bullet, were placed at a rate of 3.93% and achieved a spread of 93 basis points. The total proceeds will be used to refinance short and long-term liabilities of the Company and its subsidiaries.

→ Green Bond for UF 4.000.000

In October 2024, it issued its first green bond, for an amount equal to US\$ 163 million, in two series. The first, the AH series, was for UF 3,000,000, with a 20-year term and a rate of 2.98%. The bid/offer ratio reached 1.8 and a spread of 73 basis points was achieved. The second, in the AG series, was for UF 1,000,000 and demand reached 2.3 times the bid, with a placement rate of 3.09% and a ten-year maturity. The spread for this bond was 74 basis points. Both spreads were the lowest of the year in corporate issues. The total proceeds will be used to invest an equivalent amount in energy efficiency and renewable energy projects, among others.

→ UF 2.500.000 bond

In December 2024, the Company issued 21-year AK series bonds, achieving a placement rate of 3.14% and a spread of 94 basis points. The transaction generated great interest among investors, reflected in a demand of more than 1.6 times the amount offered. The proceeds of this transaction will be used to finance investment projects of Empresas Copec and its subsidiaries.

Photo | ARAUCO MAPA Project, Arauco, Chile

^{2.} They comprise the Green Bond Principles (GBP), the Social Bond Principles (SBP) and the Sustainable Bond Guidelines (SBG), published by the International Capital Market Association (ICMA); as well as the Green Loan Principles (GLP) and the Sustainable Loan Principles (SLP), published by the Loan Market Association (LMA), the Loan Syndications and Trading Association (LSTA) and the Asia Pacific Loan Market Association (APLMA).

→ Sustainable financing of subsidiaries

In November 2024, ARAUCO conducted a historic placement of sustainable bonds in the Chilean market for a total of UF 10,000,000. The placement rates were lower than the registration rates, reflecting the high demand for the instruments, AC Series bonds for UF 1,000,000, maturing in 2031 and an annual placement rate of 3.05%, and AE Series bonds for UF 9,000,000, maturing in 2044 and an annual placement rate of 2.89%. The company will use an equivalent amount to finance or refinance green or social projects, in accordance with the sustainable debt framework adopted by the company.

In February 2024, the subsidiary Copec obtained a US\$ 200 million green loan to finance new energy and electromobility projects. The loan was analyzed under the Green Loan Principles and certified by Valora Consultores.

COMPANY	STRATEGIC FOCUSES	MAJOR ONGOING AND FUTURE INVESTMENT PROJECTS	ACQUISITIONS
ARAUCO	ARAUCO follows a strategy aimed at offering a wide range of sustainable products made from wood for the paper, apparel, construction, packaging, furniture and energy industries. As a multinational company, it is currently seeking to diversify its production in the different markets where it operates. As such, it has proposed to invest in different lines of business in countries with competitive advantages, such as Brazil, where it will build its first pulp mill, a product that to date has been produced mainly in Chile.	→ Sucuriú project approval (Brazil) In September 2024, ARAUCO's Board of Directors approved the construction of the company's first pulp mill in Brazil, which will be located 50 km from the city of Inocência, in the state of Mato Grosso do Sul, an area that offers logistical benefits. The US\$ 4.6 billion investment, the largest in the company's history, will allow to make progress in its geographic diversification and take advantage of the increase in demand for eucalyptus pulp. The project also has several advantages: • The company in charge of supplying the equipment is Valmet, one of the main	→ New OSB ⁽⁴⁾ plant at the Trupán-Cholguán Complex (Chile) In July 2024, the start-up of an OSB product line was approved at the Trupán-Cholguán Complex in the Ñuble Region. The US\$100 million project will modernize parts of the MDF ⁽⁵⁾ line, incorporating new processes and equipment for the development of bare and value-added OSB boards. These products will contribute to strengthening the domestic construction industry. It will start operations in the second quarter of 2026. → Vikingo Plant Expansion (Mexico)
		global developers of technologies for the pulp industry, with whom an EPC ⁽³⁾ contract was signed. This company already has experience in Brazil. • The lowest cost per ton of capacity in recent pulp mill history was agreed, largely due to the unprecedented scale of the project: an annual capacity of 3.5 million tons of pulp. • The plant will have a highly digitalized design, with technologies that have already been incorporated into other operations globally. • Brazil is characterized by a wide range of subcontractors specialized in this industry. Since 2022, it has been moving forward with its environmental approvals and is currently in the earthmoving stage to prepare the area where the plant will be built starting in 2025. It is expected to start operations in the second half of 2027.	Work on the expansion of the ARAUCO subsidiary's plant in Zitácuaro, Michoacán, is already more than 50% complete, with a projected completion date for the second half of 2025. The US\$235 million project will add 300 thousand m³ of MDF production per year, half of which will be melamine, to respond to the growing demand of the furniture, construction and decoration industry in Mexico. → Plantation efficiency For the past two years, ARAUCO has been implementing a plan to increase its forestry efficiency, which has included setting work operated by its own personnel and the incorporation of on-line programming guided by artificial intelligence, with a significant reduction in costs.

Energy sector

COMPANY	STRATEGIC FOCUSES	MAJOR ONGOING AND FUTURE INVESTMENT PROJECTS	ACQUISITIONS	
Copec	Copec's stated purpose is to promote the development and mobility of people, companies and the country through its traditional business of marketing liquid fuels and exploring new lines of business that allow to evolve towards an innovative offer in the areas of new energies, new convenience and new mobility. The traditional business continues to grow and will continue to drive the country's mobility for many years to come. At the same time, Copec has developed a strategy to take early advantage of the opportunities opened up by the energy transition. It is thus venturing into different renewable energies, electromobility and convenience options. In addition, through its corporate fund Wind Ventures, it invests in startups that offer innovative solutions for these three areas. The goal is to have the experience, knowledge and alliances needed to invest on a larger scale and become a benchmark in those technologies that will become widespread in the future, leveraged on the company's brand strength.	→ Convenience In line with its strategy to grow in convenience stores outside the service station network, the subsidiary opened 40 Pronto independent stores during the year. → New business Copec made investments to increase package processing capacity at Blue Express, which reached a daily maximum of 300 thousand packages. In 2024, 40.6 million packages were distributed, 30% more than in 2023. This historic figure also responds to the fact that during the year the option of receiving and delivering packages was implemented in the vast majority of Copec stations in the country.	→ Renewable energies ⁽⁶⁾ Copec acquired Granja Solar photovoltaic farm in Tarapacá, Chile, for US\$91 million. This is the first investment of this type by the subsidiary, which supplies electricity from renewable sources to industrial customers that have begun their energy transition. → New convenience In May 2024, Copec officially acquired the national gourmet hamburger chain Streat Burger. The objective is to install locations in service stations to continue expanding its offer and encourage traffic. A pilot plan was carried out at the Copec station in San Francisco de Mostazal with very good results: the presence of Streat Burger resulted not only in high levels of sales, but also in an increase in the number of people visiting the station. During the year, three other stores were opened in high-flow stations. In the same vein, Copec became the exclusive representative in Chile of the New York pizza chain Sbarro. The subsidiary opened three locations in service stations in 2024.	2024 INVESTMENT US\$ 363 MILLION
Abastible	Abastible's sustained growth has led it to become one of the main distributors of liquefied gas (LPG) in Latin America. Today, its challenge is to continue growing in other markets with structures that are similar to the Chilean one. Abastible will continue to invest in the LPG business, convinced that it is a key fuel for the energy transition, since its chemical composition allows developing countries to reduce their CO ₂ emissions while non-conventional renewable energies (NCRE) become widespread. At the same time, in 2024, it created the subsidiary AbastibleTec, focused on offering renewable energy solutions.	Approximately two years ago, Abastible began importing gas directly from the United States. Imports increased from 147,000 tons per year to more than 800,000 tons in 2024, which were then distributed mainly in Chile and Peru, as well as Colombia and Ecuador. These new capacities require facilities to store liquefied gas. Abastible has invested in this kind of assets in Hualpén (Chile), Callao (Peru) and recently began building new import infrastructure in Cartagena de Indias (Colombia), an investment of US\$ 60 million. It also has a long-term contract with Gasmar.	→ Purchase of Gasib (Spain and Portugal) After acquiring the liquified gas operations of the Spanish Repsol in Ecuador and Peru in 2017, with very good results to date, in 2024 Abastible decided to invest in the European market. Specifically, it purchased the liquified gas business of Spanish Cepsa in the Iberian Peninsula (Spain and Portugal), with an investment of approximately €275 million. Abastible believes that there is great potential to add value to these operations. In addition, the purchase opens the doors to two markets that are similar to Chile in terms of culture and distribution of LPG, but much more advanced in the energy transition, so it is expected to obtain important lessons and good practices applicable in Latin America. There is also the opportunity to add the services of AbastibleTec and continue growing in supply through Cepsa (which changed its name to Moeve), with which it signed a long-term contract for the supply of liquified gas. Cepsa currently sells about 275 thousand tons of GL in Spain and Portugal, approximately half of Abastible's sales in Chile.	US\$ 361 MILLION

Food sector

COMPANY

Nutrisco

STRATEGIC FOCUSES

Nutrisco was created in response to the need to renew the fishing industry, which in the last 15 years has been impacted worldwide by the decrease in biomass and more restrictive regulations. In this scenario, Nutrisco's new approach proposes vertical growth, i.e., covering more links in the food chain, producing products with greater added value. It is also open to horizontal expansion into products other than seafood, which will generate synergies with the company's commercial activity and take advantage of the distribution channels already used by brands such as San José. Another crucial focus of its strategy is to privilege human consumption, with products

These guidelines have materialized in the acquisitions of Valle Frío, to develop the frozen fruit business; Flip, to enter the snacks market; and Fiordosur, which added premium marine products for export.

that meet the food needs of people now and in the future.

MAIN ONGOING AND FUTURE INVESTMENT PROJECTS

→ New fishing boat

The Seafood segment purchased a new jack mackerel fishing vessel for US\$ 22 million, increasing its fleet to seven vessels. This is the first purchase of this type since 1998 and responds to the growth in the jack mackerel fishing quota, as well as the intention to expand the supply of seafood products for human consumption. The vessel increased jack mackerel fishing capacity to 300,000 tons, is more efficient in the use of oil, has better standards of habitability and better treatment of the fish on board to preserve it in good condition for human consumption.

→ Increased freezing capacity

In 2024 Nutrisco increased its jack mackerel freezing capacity from 50,000 to 70,000 tons (a figure that will double in 2025), with the construction of a new freezing plant in Coronel that has two freezing tunnels with carton freezer technology, which allows it to freeze already packaged products much more efficiently. The investment totaled US\$ 70 million.

ACQUISITIONS

→ New acquisition in the United States

Nutrisco acquired in 2024 80% of the U.S. brand LiveMore Superfoods, based in California, famous for its innovative blends of frozen organic fruits and vegetables for nutrient-rich smoothies. Consequently, LiveMore is part of the functional food trend, which has great commercial projection. Prior to the acquisition, Valle Frío, a subsidiary of Nutrisco, was already its exclusive fruit supplier.

→ Opening in Spain

The company opened Nutrisco Europe in the town of Vigo, a strategic location for its commercial development on that continent.

INNOVATION IN THE DNA

CLIMATE ACTION AND NATURAL CAPITAL MANAGMENT

Mina Justa

Example of the corporate sustainable investment model

Mining is a business that requires a long-term vision. Not only because it requires years of development and efforts to obtain profits, but also because the success of mining companies depends on good investment decisions. Empresas Copec had this perspective when it entered mining through its subsidiary Alxar Internacional.

It had already made the strategic decision to participate in medium copper mining, where there is less competition, being off the radar of the large mining companies and out of the reach of small producers. But it also had to find a good asset, which not only implies a deposit with a high percentage of copper, but also with a cost-competitive extraction. In addition to this, a critical requirement was the location: it had to be favorable from a logistical point of view, in an area where it is possible to obtain water supply and where there is a good relationship with the communities. And, last but not least, it was important to find an experienced partner who shared the same values and vision for the future.

After about eight years of searching, Empresas Copec found the right opportunity in the district of San Juan de Marcona, department of Ica, Peru. Its location is strategic according to several criteria: it is close to the sea, which facilitates water supply —the site uses only seawater, partly desalinated and partly non-desalinated—; the nearest town has a long mining tradition, so its inhabitants have a mostly positive opinion of the mine (over 90%); and the area is not very rugged, an ideal context for the tailings deposit. In addition, the company has partnered with Minsur, a Peruvian mining company with more than half a century of local and international experience, which belongs to

the Breca Group, a business conglomerate in the same country with high environmental and safety standards.

All of the above was achieved at Mina Justa, an open-pit deposit with an average production of 100,000 tons of copper concentrate and 34,000 tons of copper cathodes, and a useful life of 16 years that could be extended.

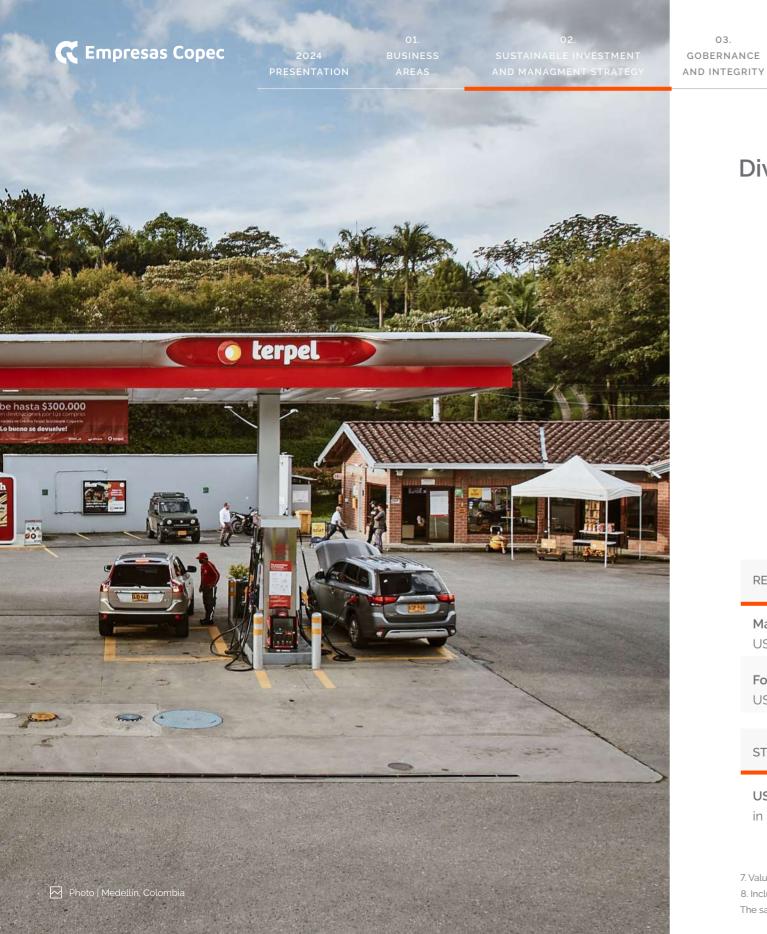

In 2024, the Justa Subterránea project continued to make progress, and, if completed, it would mean the construction of an underground mine below the current pit. This increases Mina Justa's total reserves by 500,000 tons of fine copper, while improving its production profile and extending its useful life. The company is currently working on the engineering and permitting process. If all the necessary conditions are met, production could start in 2028.

In addition, explorations carried out in the same district, whose mining property is owned by Marcobre (the Alxar and Minsur partnership), point to the possibility of other exploitable deposits.

In parallel, Alxar continues to seek new opportunities in copper mining and other minerals in countries such as Chile, Peru, Brazil, the United States and Canada, with the same diligence and strategy of allying with a local partner that knows the particularities of each market.

In the future, and considering that one of the multiple challenges of climate change and the energy transition are critical materials, including copper, Empresas Copec will continue to exploit opportunities in this industry, considering factors such as the scale of the projects, the natural competitiveness of the sites and the jurisdictions that provide certainty regarding the sustainability of the business, as well as the conditions that allow the project to improve by combining it with the Company's capabilities.

Divestments

03.

Empresas Copec promotes the sale of assets in its portfolio when it identifies that they can increase their value in other hands, and also as an active way to generate value and achieve a more efficient allocation of capital.

In 2024, ARAUCO completed the sale of forest plantations it owned in the state of Paraná, which made it possible to leverage part of the capital for the Sucuriú project. The buyer was Klabin, a pulp producer with processing centers close to the transferred assets. The transaction responds mainly to ARAUCO's decision to concentrate the development of forestry plantations in Mato Grosso do Sul, where it will build a pulp mill. In Paraná, it will continue to produce panels, which is possible thanks to the large timber market in that state.

On the other hand, making Empresas Copec's new purpose a reality implies the gradual and long-term abandonment of certain businesses, which is part of the evolution of the industries

in which the Company participates, in response to processes such as the energy transition. The subsidiary Copec has set itself the goal that, by 2050, most of its EBITDA will come from the commercialization of renewable energies and activities other than the distribution of fossil fuels, for which it is already transforming itself. This accelerated, among other reasons, for example, the sale of Mapco in the United States in 2023, a sign of the reformulation of the company's investment portfolio. In addition to this, there are also the announcements of the sale of the Sonacol, Metrogas and Agesa businesses.

In this context, during 2024 Terpel agreed to sell its subsidiary in Ecuador, dedicated to the service stations and convenience stores business, and in Peru, corresponding to the operation of service stations for the sale of liquid fuels and natural gas vehicles. Terpel will continue to distribute lubricants in both countries, among other businesses. In this way, the Company and its subsidiaries focus on the largest scale businesses, where there is the capacity to lead the industry.

Role of the Board of Directors

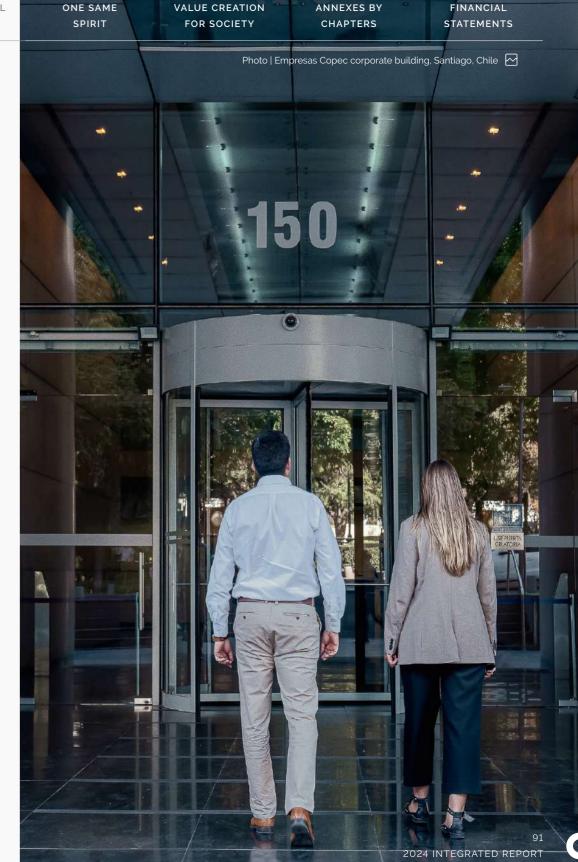

GRI (2-12) 🕝

The highest body in charge of the Company's management is the Board of Directors, composed of nine regular members elected by the Shareholders' Meeting. The Company must appoint at least one independent director and the Directors' Committee referred to in Article 50 bis of Law N° 18,046.

Empresas Copec's bylaws define the meetings of the Board of Directors as ordinary and extraordinary. The former will be held on the dates and at the times predetermined by the Board itself and will not require special notice. The latter shall be held when specially called by the Chairman, either by himself or at the indication of one or more directors, after the Chairman has qualified the need for the meeting, unless the meeting is requested by an absolute majority of the Directors, in which case the meeting shall be held without prior qualification. The Board of Directors shall hold ordinary meetings at least once a month. Notice for extraordinary meetings shall be given by registered letter sent to each of the Directors at least three days prior to the meeting, which period may be reduced to 24 hours prior to the meeting if the letter is delivered personally to the Director by a Public Notary. The summons to an extraordinary meeting shall contain a reference to the matter to be discussed therein and may be omitted if the meeting is attended by the unanimous majority of the Company's Directors.

The Board of Directors has the following powers and duties:

- → Represent the Company judicially and extrajudicially for the fulfillment of its corporate purpose.
- → Appoint and remove the CEO, chief officers and heads of the different departments and facilities of the Company.
- → Supervise conduct of the CEO and executives, suspend them, dismiss them and set their duties and remuneration.
- → Establish offices, agencies or branches in any marketplace, in or outside the country, and to suspend or suppress them when it deems it convenient.
- → Present to the Ordinary Meetings a balance sheet, inventory and report on the corporate operations of each year, and to propose to the Meeting the distribution of profits and dividends among shareholders.
- → Issue the internal regulations needed for the proper functioning of the company.
- → Inspect corporate operations and ensure the exact fulfillment of the contracts entered into.
- → Call Ordinary and Extraordinary Shareholders' Meetings.
- → Any other functions conferred by law or other provisions of the bylaws and, in general, to resolve cases not provided for therein.

In addition, it proposes to the Board of Directors the names of external auditors and private risk raters, if applicable, to be suggested to the respective Shareholders' Meeting. It also proposes to the Board of Directors a general policy for handling conflicts of interest, and makes decisions regarding the general customary policies established in accordance with the provisions of the second paragraph of Article 147 of Law N' 18,046. → The committee reports to the Board of Directors at the following meeting. In addition, it prepares an annual management report, which includes its main recommendations to the shareholders. → During 2024, each member of the Directors' Committee received a monthly compensation of UF 100 and the total budget amounted to UF 5,000. Both amounts were approved at the Annual Ordinary Shareholders' Meeting, as established in Article 50 bis of Law N' 18,046. → In total, the committee paid US\$143,385 in compensation to its members and did not incur expenses in accordance with the approved budget. None of its members received any other type of bonuses or compensation for their duties on this committee. → The committee follows the guidelines of the Policy for Hiring Advisors to the Board of Directors, mentioned in the Corporate Governance Procedures section of this document. 	 → Its role is to advise on ethics matters; to define and promote the values and conducts that are encouraged in the Code of Ethics; to propose updates and amendments to such code to the Board of Directors; and to support the Offense Prevention Officer in the different control activities carried out, mainly in the process of identifying and analyzing complaints that apply to the Prevention Model, determining investigations and the possible application of sanctions. → Reports to the Board of Directors of Empresas Copec whenever it deems necessary. → The members of the Ethics and Compliance Committee do not receive additional compensation for their role on the committee.

Corporate Governance Procedures

NCG 461 (3.2.V / 3.2.VIII) ⊙ GRI (2-17 / 2-20) ⊙

The Company has a number of practices and procedures in plece to ensure the proper and efficient functioning of the Board of Directors.

NAME	REVIEW	DOCUMENT NAME	REVIEW
Directors Induction Procedure	 → The objective of this program is for them to learn and understand the company's mission, vision, values, purpose, strategic objectives, business, risks, policies, procedures, main accounting criteria, applicable legal framework and relevant stakeholders, among other aspects. It also requires new directors to visit the facilities of the main subsidiaries. → During 2024, as part of the induction program, Karin Jürgensen Elbo, Marcela Achurra González, Francisco León Délano, Juan Edgardo Goldenberg Peñafiel and Maurizio Angelini Amadori, together with the secretary of the Board of Directors, Dolores Ugarte Pérez, visited Line 3 of the Arauco complex (MAPA Project) and Horcones nurseries in the Biobío Region. 	Training procedure for the Board of Directors	 → It establishes that directors are required, at least once a year, to update their knowledge of best corporate governance practices; main local and international progress in inclusion diversity and sustainability reporting; risk management; conflicts of interest; and national and international jurisprudence on duties of care, confidentiality, loyalty, diligence and information among other matters. → During 2024, the members of the Board of Directors attended the following update sessions Greenwashing and responsibility in corporate communication The company facing an exponential change New labor regulations in Chile and their impact on companies How do we prepare ourselves to lead in the AI era? Updates on Free Competition and new economic crimes
Policy for hiring advisors to the Board of Directors	 → It defines that the Board of Directors may hire advisors in accounting, economic, tax, financial, investment, legal matters or on those it deems it advisable to obtain the opinion of an expert. For this purpose, any director may propose the hiring of advisors, which shall be evaluated based on technical and suitability aspects, and approved or rejected by a simple majority. → The Board of Directors hired the services of PwC to audit the Company's financial statements for the 2024 period, after this appointment was approved by the Shareholders' Meeting. → From time to time, these contracts are subject to an exhaustive bidding process in which the main companies in the field participate. The proposals are evaluated in more than 70 dimensions, which consider technical and economic aspects, sanctions and restrictions. → The amounts disbursed on these services are in line with the Company's budget and are not published, with the sole purpose of not influencing future bidding processes. 	Directors application policy and procedure	→ Indicates the deadlines and information required for any natural person who is a free accoministrator of his/her assets to apply for the position of director of Empresas Copec. → There are no organizational, social or cultural barriers for board candidates. There are also no requirements regarding skills, qualifications, experience, visions and maximum limits of participation in other boards of directors in order to be eligible for election. Prior to the corresponding vote, the Company publishes on its website information regarding the experience and profession of all candidates, so that shareholders can vote in an informed basis.

09. FINANCIAL STATEMENTS

NAME	REVIEW	DOCUMENT NAME	REVIEW
Manual for the analysis and evaluation of information of interest to the market.	 → It defines the mechanisms to facilitate the analysis, detection and evaluation of the sufficiency, timeliness, relevance and ease of understanding of the information provided by the Company to the market. The Board of Directors, on a monthly basis, reviews the sufficiency, timeliness, relevance and ease of understanding of the information disclosed to the market. → For the time being, the services of external advisors have not been hired to carry out these analyses. 	Replacement procedure for the CEO and senior executives	→ It outlines the operating mechanism in the event of absence, resignation, replacement or other circumstances of removal of the chief executive officer and/or senior executives.
Information Systems for Directors	→ The Board of Directors has a technological platform to store and back up the minutes, summons and documents of each of the meetings for the past ten years, allowing its members to access them securely, remotely and at all times. They also have access to the documents of a new meeting days before it is held and to its final minutes. In addition, the Board of Directors uses an online technological system that enables the digital and encrypted signature of these documents.	Self-evaluation procedure	→ The Board of Directors permanently evaluates the collective and individual performance of its members, as well as the performance of its committees, in search of continuous improvement. This self-evaluation is not carried out through a formal procedure. The constant self-assessment includes the detection of areas in which its members can be trained for continuous updating of knowledge (explained in the section "Training procedure for the Board of Directors" on page 92) and the detection of possible barriers that could be inhibiting adequate diversity, among other aspects. So far, the Board does not consider the possible hiring of an external expert for the evaluation of its performance and functioning.
Compensation, severance pay and incentive policy for managers and senior executives	 →This document sets out guidelines for aligning the compensation of senior executives with the Company's management quality and priorities. → The salary structures and compensation and indemnity policies of the Chief Executive Officer and other key executives are not approved by the Shareholders' Meeting and are not considered for disclosure to the general public. The CEO's compensation is defined by the Chairman of the Board of Directors, who annually evaluates the fixed base and defines the variable portion. The latter is voluntary and is determined based on market aspects, financial performance, team leadership, achievements, conflict resolution and mergers and acquisitions, among other factors. → In addition, once a year, the CEO presents to the Directors' Committee the compensation systems of the senior executives and their variations compared to the previous year, together with a summary showing the percentile in which each executive is located according to their total compensation and that of the market. In this regard, these payments are reviewed considering the market benchmark and individual performance. In addition, the Company has a policy that variable compensation should not exceed 50% of total compensation. There are no stock incentives or bonuses. 	Procedure for participation in Shareholders' Meetings	→ Since 2020, the Company has a mechanism for shareholders to participate, vote and observe in real time what happens in the meetings remotely through an access link. Likewise, the resolutions adopted are published on the Empresas Copec website with a time lag of less than five minutes for the general public. Shareholder and directors' committee comments → Between January 1 and December 31, 2024, Empresas Copec S.A. did not receive any comments from the Directors' Committee or from shareholders owning or representing 10% or more of the issued voting shares, in accordance with the provisions of Articles 74 of Law N* 18,046 on Corporations and 136 of the Corporations Regulations.

Risk Management

Risk Management Model

Empresas Copec's Comprehensive Risk Management Policy seeks to systematically recognize internal or external events that may represent risks for achieving business objectives. This requires the implementation of tools to evaluate them consistently, determine their consequences and be able to develop mitigation actions to keep them at an acceptable level. In order to seek improvements, this policy is reviewed periodically.

Risk management at Empresas Copec is carried out comprehensively, including the Board of Directors, the Directors' Committee, the Chief Executive Officer and the different units that comprise the Company.

MAIN ROLES	
Board of Directors	→ It is responsible for ensuring adequate integrated risk management, approving the policy and general guidelines, and ensuring the necessary resources for its proper management.
Directors' Committee	→ It reviews, in a supportive and non-resolutionary capacity, matters related to risk management.
Chief Executive Officer	→ Must promote the implementation of integrated risk management, promote a corresponding culture in the Company and define ongoing training programs on the policies, procedures, controls and codes defined for this purpose. The CEO also ensures the supervision of the roles of the person in charge of the risk function.
Risk Management Unit	 → It has a facilitating and direct collaborating role in the implementation and operation of the comprehensive risk management process, as well as in its continuous improvement. This unit reports to the Board of Directors and the CEO twice a year. → This role relies on a group of independent professionals from Deloitte, who were appointed by Board of Directors in December 2022 for a period of two years.
Risk managers	→ It is their responsibility to manage risks, identify them and ensure adequate management over them. This involves implementing controls, self-assessing, proposing action plans and activating them.
Internal Audit Unit	 → Responsible for evaluating the internal control system and reporting to the Board of Directors every six months on the degree of compliance with policies, regulations, standards, legal provisions or other legal requirements. → Evaluates the operating effectiveness of identified controls and proposes improvements to weaknesses. → Reports semiannually to the Board of Directors the findings and conclusions of its work, in the presence of the Chief Executive Officer, unless otherwise indicated.
External Audit Unit	 → Responsible for examining the accounting, inventories, balance sheets and other financial statements of the Company. → Presents to the Board of Directors the conclusions of its work, contained in the audit report, in the presence of the Chief Executive Officer, unless otherwise indicated. → The Company has a policy that the audit manager, the responsible partner or the auditing firm rotate at least once every five years, in order to ensure their total independence and guarantee the transparency of the financial information.

Three-line model

Risk management process

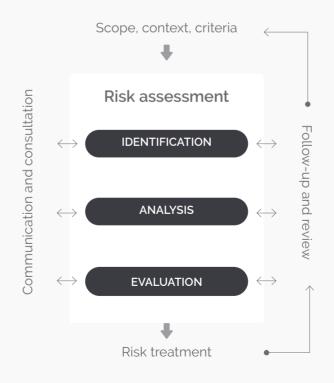

Empresas Copec's Comprehensive Risk Management Model is based on the COSO ERM and ISO 31000 international standards, current legal regulations and best practices. It is updated at least once a year by the Risk Management unit.

In order to make monitoring and analysis more efficient, Empresas Copec identifies and manages its risks through an integral matrix, which classifies them as strategic, process, fraud, compliance, crime prevention, etc.

The definition and evaluation of strategic risks are annually reviewed by management, the Risk Management unit and specialists in contingent issues.

In addition, emerging risks related to the business context and environment are monitored and reported to the Board of Directors.

The Company annually informs and trains all employees on risk management. In 2024, the session focused on introducing the key concepts related to this topic, reviewing the policy, possible events that could constitute a risk and the list of strategic risks.

Risk tolerance

It is the amount of risk that the Company is willing to accept in order to fulfill its mission and objectives, as well as to preserve and create value, in line with its strategy.

For Empresas Copec it is important to manage its risks within the limits of impact and probability defined in its policy.

The criteria for defining probability may be statistical, based on management's experience or knowledge of the subject matter, or determined by simulation or other techniques.

GOVERNANCE STRATEGY RISK MANAGEMENT METRICS AND TARGETS

→ Ethics and integrity management at Empresas Copec is led by senior management, with a key role played by the People Committee, which works together with experts in labor law and risk management.

In addition, employees are involved to ensure a collaborative approach to identifying and preventing unethical and unrespectful behavior in the work environment.

→ The Code of Ethics establishes the fundamental principles governing the conduct of people working in the company, addressing issues such as personal integrity, antitrust, conflicts of interest, protection of personal data and respect for human rights, in order to ensure a solid basis for responsible decision-making.

- → Empresas Copec S.A. has implemented a preventive approach aligned with the National Occupational Health and Safety Policy (DS N°2 of 2024), committing itself to:
- Guarantee respect for the life and physical and psychological integrity of
- Promote gender equity, diversity and inclusion. Encourage participation
- · Continuously improve the management of psychosocial risks. Eliminate or mitigate risks at source.

In addition, the Company reinforces the culture of ethics and integrity through:

- Continuous training, which in 2024 addressed Karin Law and prevention Of harassment and workplace violence.
- A prevention program with clear protocols and safeguards. Complaint management with investigation, protection and sanction procedures.
- Empresas Copec has a Conflict of Interest Management Policy that instructs those who find themselves in a situation of conflict of interest to refrain from making a decision and to communicate it.

- → To mitigate risks associated with ethics and integrity, Empresas Copec developed a risk matrix to identify, evaluate and manage possible threats in the work environment. This is done through:
- Detection of risk factors, through surveys and technical analysis.
- Prevention protocol, which includes periodic training, early referral of cases and complaint management
- · Whistleblowing and sanction mechanisms that ensure confidentiality and rigorous investigation in case of incidents.
- · Participation of the Joint Health and Safety Committee (CPHS) in the identification and management of psychosocial risks at work.

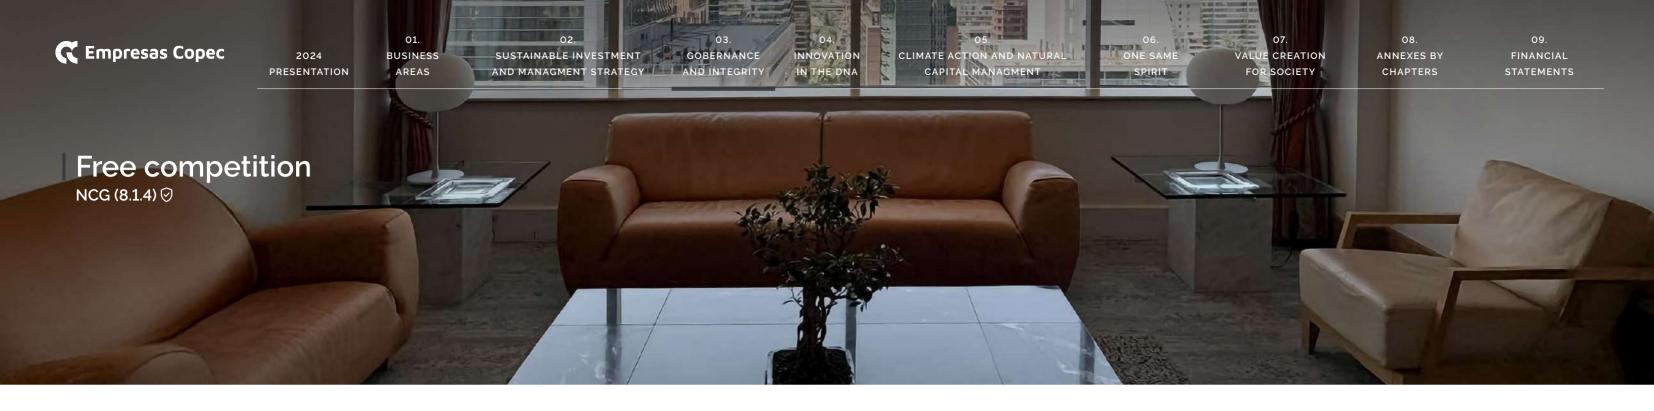

- → Empresas Copec measures and monitors the impact of its initiatives through:
- Trainings conducted and level of participation.
- Number of complaints and their resolution.
- Review and update of the risk matrix.

The main objective of these actions is to strengthen an organizational culture based on respect, transparency and ethics, ensuring a work environment free of discrimination, violence and harassment.

Individually, in 2024 Empresas Copec received no complaints of sexual harassment under Law N°. 20,005, nor complaints of labor harassment under Law N° 20,607.

In 2024, 100% of all Empresas Copec S.A. employees were trained in the protocol for the prevention of sexual and workplace harassment and violence in the workplace, and the procedure for investigation and sanction to which they are subject.

GOVERNANCE **STRATEGY** RISK MANAGEMENT **METRICS AND TARGETS**

- \rightarrow For Empresas Copec, antitrust is the basis for the development of the mar- \rightarrow To deepen the commitment to antitrust, a kets in which it participates, since it promotes the generation of wealth, equal opportunities, greater efficiency in production and an increase in innovation. For consumers, it increases their well-being and validates the role of private enterprise.
- → Empresas Copec has a General Antitrust Policy that regulates and strengthens compliance with the principles and standards in this area, which must be rigorously followed and safeguarded by all those who are part of the Company, in order to promote participation in the market with the highest ethical and regulatory standards.

ANTITRUST OFFICER **BOARD OF DIRECTORS**

- Compliance Program was developed to reinforce the knowledge of all employees in this area and contribute to fostering a culture of respect for the applicable principles and regulations, following the recommendations of the Chilean National Economic Prosecutor's Office and the best management practices in this regard.
- → Notwithstanding the duties incumbent on Management, there is a compliance officer in charge of implementing this program with full autonomy and independence, who reports directly to the Board of Directors, which evaluates his or her performance on an annual basis.
- → In order to identify risks related to antitrust regulations, the compliance officer conducts a periodic internal analysis. If necessary, he/she may hire specialists in the field, especially in the economic and legal fields.
- → The analysis includes the following activities:
- Background survey.
- Identification of risks.
- Determination of risk mitigation measures of such risks.
- Dissemination of the risk elements or situations identified and the measures to be implemented, if applicable.

- → The Compliance Program considers:
- Antitrust Policy.
- Antitrust regulations.
- A system for consultations and complaints.
- A system for reviewing and monitoring compliance with antitrust regulations.
- Training and dissemination.
- Annual presentation to the Board.
- Identification of contractual matters that need to to consider the antitrust principles.
- Consideration in the annual performance evaluation.

Crime Prevention Model

NCG (8.1.5) ⊘

→ Empresas Copec has an Offense Prevention Model (OPM), which complies with Law N° 20,393 on Criminal Liability of Legal Entities and is headed by an Offense Prevention Officer (OPO), who was appointed by the Board of Directors at a meeting held on August 29, 2024, for a period of up to three years.

CHANNEL FOR COMPLAINTS
AND CONSULTATIONS

- → The main role of the OPO is to establish an offense prevention system, especially in accordance with Law N° 20,393. It must also identify, together with the heads of processes, the activities that generate risks; permanently supervise the OPM; constantly reevaluate its execution; and train collaborators, executives and directors.
- → The OPO is independent and has full autonomy and resources provided by the company to carry out its duties, in the terms established in paragraph 3 of Article 4 of Law N° 20,393. He/she reports at least every six months to the Board of Directors on the management of the OPM and informs on issues of interest and the necessary modifications to the compliance system.
- → The OPO's mission is to ensure that the Company's internal processes and activities have effective offense risk prevention controls. It must also maintain a record of evidence of compliance and execution of these controls.
- → Empresas Copec was not sanctioned nor was there any investigation related to the offenses of Law N° 20,393 in 2024.
- → During 2024, Empresas Copec updated its OPM, adding new legal risks that were incorporated into Law N° 20,393 during that year. In addition to the above, the main policies and procedures were adapted in accordance with the amendments introduced by Law 21,595 to the criminal liability regime for legal entities.
- → The Offense Prevention Model is one of the tools of Empresas Copec's Corporate Integrity System, being one of its objectives to ensure compliance with the management and supervisory duties of directors and executives.
- → The Company's OPM is under permanent review, and in March 2025 will begin the process of evaluation by an independent third party, in compliance with the provisions of numeral 4 of Article 4 of Law N° 20,393.

Investor relations⁽⁶⁾

GOVERNANCE STRATEGY RISK MANAGEMENT METRICS AND TARGETS

→Empresas Copec Investor Relations (IR) area specializes in responding to and providing guidance on market behavior, business performance and the main financial, economic and legal risks. It is responsible for the timely disclosure of financial results and issuing communications of interest to investors and analysts. In addition, it reports to the Board of Directors on a monthly basis on his participation in national and international conferences and seminars, ensuring a continuous flow of relevant information.

- → The Company has developed several platforms and tools to improve communication with its investors and promote transparency. These initiatives include:
- Webcast: a platform that allows investors to learn about financial results in a timely manner and to make online consultations.
- Institutional results video: quarterly presentation by the Chief Executive Officer, who provides a strategic vision of the Group's main progress, milestones and challenges.
- Investor website: portal with relevant and updated information, including earnings reports, corporate presentations, news and minutes of Shareholders' Meetings.
- Investor Day: Conference for direct interaction with investors, providing them with a comprehensive view of the corporate strategy and financial performance.
- Save the Date Notifications: feature within the website that offers investors the possibility to receive reminders about earnings presentations and conferences.

- → The Investor Relations area plays a key role in identifying and communicating financial and market risks to stakeholders. Through the Market Information Manual and IR Procedure, a clear framework is established on who, how and when financial communication activities should be carried out. This allows for disclosure in line with best practices, minimizing information asymmetries and ensuring regulatory compliance.
- → The IR area is part of Empresas Copec's risk management map, that identifies those that may interfere with the process and the controls that mitigate them and which are annually reviewed to ensure their effectiveness. In addition, in the last four years, two internal audits have been carried out on investor relations.
- → As part of its commitment to transparency, the control environment is periodically evaluated, a process that is documented following procedural manuals that establish a general framework for the area's communications with the financial market and investors.

- → To measure the effectiveness of the Investor Relations area, there is a follow up on inquiries received and participation in key events:
- In 2024, the area had 286 meetings with investors, of which 32% are foreign.
- Digital communication channels have been strengthened, increasing interaction with investors through webcasts and the corporate website.
- A structured calendar of presentations and events is kept, ensuring fluid and timely communication with the different stakeholders.

Sustainability

GOVERNANCE STRATEGY RISK MANAGEMENT METRICS AND TARGETS

- → Empresas Copec's Sustainability Policy sets out the principles, guidelines and general directives that ensure that the Company's activities are carried out under high sustainability standards.
- → The highest level management position at Empresas Copec responsible for addressing issues related to environmental, social and governance matters is the Sustainability and Corporate Affairs Director, who reports monthly to the CEO and, as necessary, to the Board of Directors and/or the Directors' Committee.
- →The Chief Executive Officer reports to the Board of Directors on relevant sustainability issues on a monthly basis.
- → The Sustainability Executive Committee is responsible for ensuring that sustainability is part of the Company's long-term strategy.
- → In 2024, the Sustainability Council was created with the aim of promoting collaboration between Empresas Copec and its subsidiaries, setting standards and best practices and developing joint initiatives, among other issues.

- → Empresas Copec integrates a sustainability approach in its businesses by incorporating environmental, social and governance criteria in strategic and operational decision-making. This is reflected in its investment processes, operations management and development of new products and services aligned with the transition to a low-carbon economy and the generation of value for society.
- In this sense, its Sustainable Investment and Management Model articulates the commitment to responsible development through four fundamental pillars:
- 1) Sustainability and innovation at the core
- 2) Governance and integrity
- 3) Climate action and natural capital management
- 4) Value creation for society

- → Empresas Copec applies a comprehensive approach for the identification, evaluation and mitigation of risks associated with sustainability, in line with its Sustainability Policy and Risk Management Model.
- This approach considers:
- Climate risks⁽⁷⁾: assessment of physical and transition risks arising from climate change, considering impacts on the operation and the supply chain.
- Regulatory and reputational risks: monitoring emerging regulations and stakeholder expectations to ensure compliance.
- Financial and operational risks: sustainability analysis in investment decision making and operational management, ensuring the long-term resilience of the business.
- In addition, together with the Risk Management area, emerging risks are measured and annually presented to the Sustainability Executive Committee.

- ightarrow To ensure compliance with its sustainability strategy, the Company defines indicators and objectives in ac-
- area and facilitate informed decision making.

 The sustainability goals and objectives of the subsidiaries are detailed in chapter 2 of "Investment Strategy and

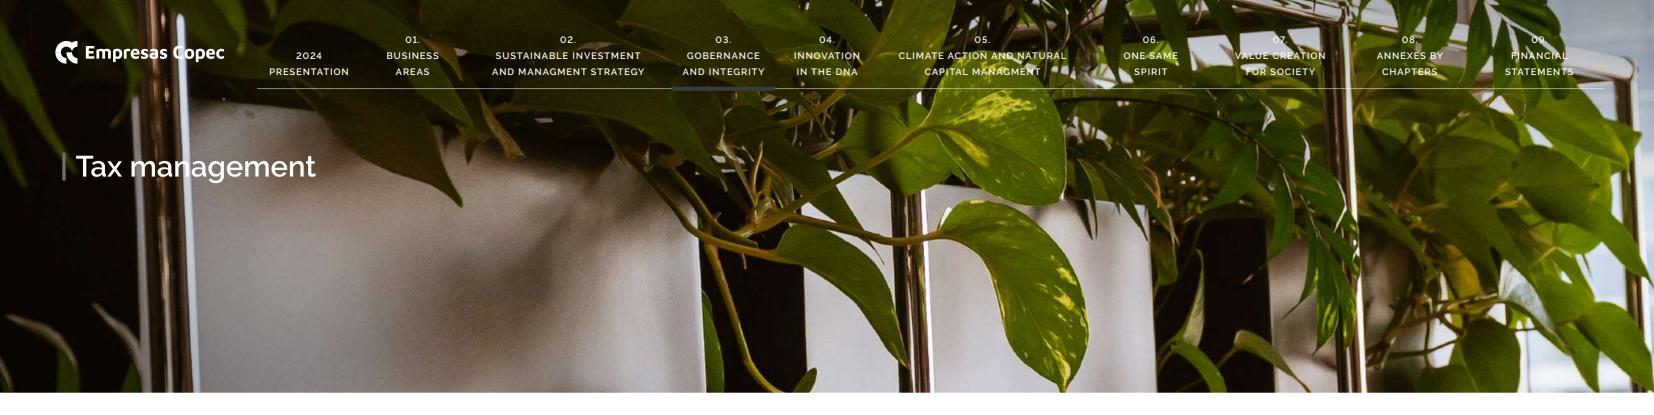

Sustainable Management", while the main certifications

can be found in chapter 8 of "Chapter Annexes".

cordance with international standards and industry best

practices, which allow it to monitor performance in this

GOVERNANCE STRATEGY RISK MANAGEMENT **METRICS AND TARGETS**

- → Empresas Copec's General Tax Policy seeks to contribute, in a timely manner → The Board of Directors of Empresas Copec is notified of and in accordance with the law, to the generation of tax revenues to meet public and social needs, while simultaneously fulfilling its obligation towards investors. This takes into account the interests of shareholders, regulators and the general public
- → This Policy is a guide for those in charge of tax functions, so that they carry them out in accordance with the law, in the different jurisdictions where the Company operates, respecting the principles expressed in this document and safeguarding social interest.
- any tax audits that could have a material impact on both the financial statements and reputation.
- → Empresas Copec's Tax Manual seeks to ensure that the tax function is embedded in the values and principles that govern its conduct. This document makes explicit the way in which tax risk is managed and assigns specific roles and responsibilities to its collaborators involved in the reporting cycle.
- → Empresas Copec's Tax Department, under the responsibility of the Administration and Finance Management, has a permanent tax advisory service with one of the main auditing firms in the market.
- → Regarding the tax risk management of the subsidiaries, the Company shares the good practices and guidelines contained in its policy. However, the respective boards of directors and management have full autonomy in decision-making.
- → In 2024, income tax expense(8) at the consolidated level totaled US\$375,493,000, 158% higher than in the previous year. This increase is mainly explained by a
- higher income tax expense of the subsidiary ARAUCO.

→ Country by Country report (CbCr)

The information shown below is based on the Sworn Statement N° 1,937 filed with the Chilean Internal Revenue Service, restated for Empresas Copec and its subsidiaries. It consists of the financial and tax disclosure for each jurisdiction in which it has a presence, without consolidation adjustments.

This information was prepared together with a team of expert advisors in the field, and considers the collection of data from more than 140 companies.

→ The purpose of Empresas Copec's General Information Security Policy is to establish the general criteria and guidelines on the management of the subject, and to guide the actions adopted and committed to by Management so that they are aligned with the business objectives.

GOVERNANCE

→ The Company has an Information Security Model that contains the rules and procedures established to guarantee adequate management in this area.

STRATEGY

- → Through this Model, Empresas Copec sets different policies and guidelines that allow to promote good employee behavior and align itself with global standards, such as ISO 27001.
- → The Information Security Committee is responsible for this model, reporting directly to the Chief Executive Officer of Empresas Copec. Among its role is to implement improvements and controls in the different processes, thus guaranteeing the protection of the Company's information assets.
- → In addition, the Information Security Officer must ensure that all employees comply with the guidelines established in the Policy and identify the gaps in the Company, in order to subsequently formulate recommendations and implement the pertinent measures.

→ Currently, the strategic risks of information security and loss of operational continuity that are integrated into the corporate risk matrix are managed by the Information Security Officer and monitored by the Information Security Committee.

RISK MANAGEMENT

- → On the other hand, to address the relevant cybersecurity expertise involved in the cybersecurity strategy, the Board of Directors designated the role of the Corporate Information Security Officer (CISO). This is an external provider, who is responsible for managing and overseeing the Group's cybersecurity. The CISO heads the Corporate Security Committee, which meets twice a year and is attended by executives from the Company and its subsidiaries.
- → In addition, in order to share best practices and develop joint projects, there is an Information Security Operating Committee, composed of those responsible for these issues in the subsidiaries and related companies.
- ightarrow In 2024, an analysis of the use of emerging technologies was conducted together with the Risk Management unit.

METRICS AND TARGETS

stand out:

• Induction of all new employees, detailing the procedure for reporting incidents.

→ Among the Company's initiatives in this area, the following

- Incorporation of information security competencies in the performance evaluation.
- Training on several cybersecurity topics and risks to which employees are exposed.
- Ethical hacking of platforms and ethical phishing drills for the entire staff.
- Scanning of vulnerabilities in employees' equipment through software that includes the execution of solutions.
- A disaster recovery test was conducted in 2024 with satisfactory results.
- Definition and review of access to internal systems for different positions.
- Analysis of regulations that could affect cybersecurity management.

Future

The future is a space that we build in the present, day by day, with our decisions and actions. It is a projection that invites us to imagine and create a world full of possibilities. Working for the future implies dreaming big, but also acting with determination and responsibility in the present. It is a commitment to innovation, constant learning and adaptability in the face of change. Dreaming the future is ultimately an exercise in hope and commitment an act of generosity that seeks to build a tomorrow that will benefit future generations.

Continuous improvement in operations

Impact on environmental management

Better products and services

Social impact

Empresas Copec promotes curiosity, confronts the establishment and transforms obstacles and mistakes into possibilities for growth, which is why innovation is part of its values.

To shape the world for future generations requires creating for change. Today we are facing a climate crisis, economic inequality and scarcity of basic resources in some regions of the world, which are the consequence of a short-sighted approach and put at risk the future of generations to come. Faced with this scenario, it becomes a priority to change processes, technologies, customs and habits based on short-term logic. Empresas Copec has set out to face these global problems through innovation, a determination that requires projecting several decades, anticipating scenarios and needs, and constantly challenging itself.

The innovative spirit has accompanied Empresas Copec since its origin. It is a differentiating factor that gives it a competitive advantage in the sectors in which it operates and allows it to

consolidate high-potential investment projects. Over the decades, this approach has translated into practices that have already become ingrained and integrated into its business model, such as trend monitoring, proximity to customers, research and development, and the expansion and substitution of its offering to adapt it to people's needs.

Empresas Copec's subsidiaries develop initiatives that range from internally promoting a culture of innovation among its employees and forging strategic alliances with international benchmarks to transforming its operations to generate a positive impact on the environment and deliver better services and products to its customers. Thus, they have been incorporating cutting-edge technologies such as Big Data, artificial intelligence, internet of things and robotics, always with the aim of improving its production and commercial processes to contribute to solving global challenges.

Innovation by sector

☆ Forestry sector

STRATEGY

Innovation is an essential part of ARAUCO's strategy, combining ideas, technology, process optimization, creativity and entrepreneurship in the development of new and better solutions for the needs of people and industry, in line with social and environmental sustainability.

This strategy includes collaboration with a wide network of research centers, participation in research programs and investment in innovation projects.

R+D+I PLATFORMS

→ Bioforest

Since 2024, the Bioforest Research Center has focused on developing and implementing knowledge and technologies that add concrete value to the business in a sustainable way, connecting in a more fluid way the participation of the different players involved in research, development and innovation, together with a solid internal process in the management of ideas and projects to ensure their success. For this purpose, it has a high-level team of researchers who are daily looking for new ideas to develop. The aim of this new flow is to get closer to the company's areas and involve them in the projects from the moment they are ideas until they become reality, since their perspective is key for the solutions to respond to current challenges.

It also maintains a broad collaboration network that enables the exchange of knowledge and the delivery of added value to the business through the continuous improvement of industrial and forestry management. And, in keeping with its commitment to the environment of its operations and the surrounding communities, ARAUCO is part of scientific research programs in the ecosystems of which it is a user. During 2024, they carried out a collaboration strategy with different research centers and universities to move forward in environmental and ecological projects. This joint effort has resulted in important progress and discoveries, the final product of which are publications in books and national and international scientific journals, which are disseminated among the authorities and the community, becoming important community management tools. These projects are also integrated into operations as innovation projects.

Thanks to all of these efforts, through research projects, the subsidiary has been able to more fully understand complex natural phenomena such as climate change. For the benefit of the community and the fulfillment of the SDGs, and as a reference experience for this and other industries, ARAUCO has transformed this knowledge into sustainable practices in biodiversity conservation and ecosystem services.

\rightarrow TreeCo

As of September 2023, ARAUCO is a majority shareholder of this U.S. company, a pioneer in editing tree genomes in order to improve their attributes and make them more sustainable. For example, to make them more resistant to disease and climate change, to make their growth more efficient, or to produce more pulp per cubic meter of wood. To do so, they use CRISPR technology⁽¹⁾, which allows genomic editing in living organisms in a non-transgenic way. They are currently working in laboratories at North Carolina State University.

\rightarrow Hackathon

The objective of this initiative is to put into practice the knowledge of computer experts in order to solve seven problems of the different businesses. In 2024, 26 IT teams from Chile, Argentina, Brazil, Mexico, the United States and Canada participated.

INNOVATION IN PRODUCTS AND SERVICES

ARAUCO has spent more than three decades researching and developing new products and services that maximize the value of forest resources. In recent years, its Valdivia pulp mill began producing dissolving pulp, which has environmental and productive advantages over cotton.

In addition to this, there are products such as Hilam, structural laminated timber, and the housing of E2E, a company fully acquired by ARAUCO in 2023. With a presence in Chile and Brazil, E2E has developed an industrialized construction system based on panels with high thermal, acoustic and resistance performance from certified renewable forests.

In 2024, a new innovative service was added to this broad portfolio:

New satellite to monitor biodiversity

In August, Lemu, an ARAUCO Ventures startup, launched the first private Chilean satellite, called Lemu Nge (which means "eye of the forest" in Mapudungún), designed to observe changes in the planet's biodiversity. It is a nanosatellite with a high-definition hyperspectral camera that captures details imperceptible to the human eye, so it can identify changes or new trends in the environment in a timely manner. Because of this technology, Lemu will be able to offer biodiversity monitoring services to companies or institutions that carry out conservation actions, including ARAUCO.

Energy sector

STRATEGY

→ Copec

→ Abastible

The company has a constant focus on innovation and the development of customer-centric technology Its aim is to create solutions that improve people's quality of life, contribute to reducing the impact on the environment and facilitate connectivity for the mobility of the country.

R+D+I PLATFORMS

sidiary Copec Voltex in 2018, through which it entered electromobility. It then expanded into other businesses in new energies, new mobility and new convenience, giving rise to the business ecosystem known as Copec Wind. This platform is divided into two areas:

Copec Wind Ventures:

Located in San Francisco, USA, it is a corporate venture capital aimed at investing in startups that offer innovative solutions in the fields of energy, mobility and convenience.

Copec Wind Garage:

New business unit that identifies, incubates and scales innovative ideas that facilitate people's lives on the move.

As a result of the work of these two areas, Copec has a portfolio of heterogeneous companies that provide new solutions in energy, mobility and convenience, with the common denominator of innovation.

→ AbastibleTec

The company drives innovation to meet the demands of its customers, following a strategy focused on offering energy solutions. To this end, it offers comprehensive consulting services, starting with a diagnosis of the energy realities of its customers, and then developing solutions that meet their particular needs, aligned with operational, economic and environmental optimization.

A subsidiary created in 2024 that focuses on the development of innovative technological solutions that help clients transition to new renewable energy sources, increase energy efficiency, improve their productivity, technologize operational indicators or other needs that require high levels of innovation. It also has a development team, whose mission is to add new services and products through investment in technology-based start-ups interested in growing hand in hand with Abastible.

INNOVATION IN PRODUCTS AND SERVICES

The search for innovative solutions led the company to create the sub- With Voltex, Copec has set out to lead electromobility in Chile and the region. Today it has the most extensive network of chargers in South America. At the same time, through investments and alliances with startups, it is venturing into new energies and technologies to revolutionize last-mile logistics.

→ New battery exchange network

In 2024 Voltex launched the first battery exchange network for electric motorcycles in Chile and Colombia, a service powered by artificial intelligence that allows users to exchange their discharged battery for a new one in less than a minute. As of December 31, 2024, 15 exchange points have been implemented in Chile and 12 in Colombia. The plan is part of an agreement reached between Copec and the Taiwanese startup Gogoro.

→ Sustainable fuels

In 2024, through Copec Wind Ventures, Copec invested in Ineratec, a German startup, leader in the production of synthetic fuels, with which it subsequently signed a Memorandum of Understanding (MOU), with a commitment to explore the production of e-diesel in Chile. This collaboration materialized in the SYNFUELS BIOBÍO project, a strategic alliance between Copec, ARAUCO, Abastible and other players, which seeks to build the first industrial-scale plant for e-fuels and by-products in the country.

In December, SYNFUELS BIOBÍO was awarded a 3.5 billion pesos fund from Corfo's Technological Program for the Use and Adoption of Hydrogen, a key step that brings the initiative closer to materialization and reinforces its potential impact on Chile's energy transition and security.

→ Blue Express continues to transform e-commerce logistics

The Copec subsidiary sealed a venture capital investment in Reversso, a Chilean start-up that created an automated system for exchanging products in e-commerce, enabling companies to retain up to 80% of sales at risk of return. Several Copec service stations are defined as pickup, shipping or package return points.

→ Development of a project to produce fertilizers from green hydrogen

In July 2024, Abastible and the electricity company Comasa signed an agreement to carry out a carbon neutral fertilizer production project using green ammonia, biogenic CO2 and bio-ash from biomass generation plants. It includes an industrial pilot plant in Lautaro, Araucanía Region, to manufacture the green hydrogen and produce 40,000 tons of fertilizer per year. The US\$10 million investment will be partially financed with a grant from Corfo. AbastibleTec will develop the large-scale engineering and operational risk analysis, while Comasa will provide infrastructure, technology and the technical equipment. Fertilizers are currently imported from China and are made from fossil fuels. This initiative seeks to offer renewable alternatives to local agriculture.

Copec is acknowledged for its innovative role

→ "Innovation in Public Service" Award

The company was awarded for its electroterminals for public transportation in the 11th version of the C³ Creativity and Innovation Ranking, by Brinca, Fundación Chile and Universidad Adolfo Ibáñez Business School. The recognition highlights Copec's commitment to the transformation of urban transportation infrastructure towards cleaner, more sustainable and efficient alternatives.

\rightarrow N° 1 in the ranking of the most innovative companies in Chile

The subsidiary won first place in the fuel category of the Most Innovative Companies 2024 ranking for developing sustainable energy solutions and diversifying its offering, which now includes renewable energies, electromobility and convenience. In addition, it was distinguished as the most admired company in innovation in Chile.

The analysis was prepared by MIC Business Consulting, Universidad de los Andes ESE Business School and El Mercurio. Corporate innovation capacity is evaluated in seven dimensions, including strategy, culture, and leadership.

→ Leader in Corporate Venture Capital Ranking in Chile

Copec Wind Ventures was chosen the number one corporate venture capital nationally in the latest measurement carried out by ESE Business School, MIC Business Consulting and El Mercurio.

Of its portfolio, four startups have reached unicorn status and three have exited through acquisition or IPO. Among the most notable are Turntide Techonolgies, Galco and Inaretec.

→ Digital ecosystem to manage energy resources at Copec EMOAC industrial customers

Energy management is now a key issue for industries of all kinds. For this reason, Copec EMOAC developed in 2024 a digital platform that optimizes the management of energy sources in a precise manner, managing to boost both operational efficiency and operational sustainability. This, thanks to a telemetry system that allows obtaining reliable data in real time from any location, generating key performance indicators for strategic decision making. The results range from optimized operating times to improved resource management.

Food sector

STRATEGY

→ Nutrisco

The company is committed to making a positive impact on the lives of people, industries and the planet through a sustainable nutrition model and a high-standard operation based on constant innovation. Its business model is designed to detect new food trends in order to produce and market nutrition solutions that meet the current and future needs of consumers.

R+D+I PLATFORMS

→ Nutrisco and CeTA

The company hosts at its facilities in Coquimbo and Coronel the Technological Center for Food Innovation (CeTA), which offers advanced technology for the development of local food innovation ecosystems. The North Center dates from 2020, while the South Center was inaugurated in 2024. It has 235 m² equipped with state-of-the-art machinery, laboratories, product development areas and production lines for startups, SMEs and large companies from the Biobío, La Araucanía, Los Ríos and Los Lagos regions to materialize food piloting and prototyping projects.

INNOVATION IN PRODUCTS AND SERVICES

Nutrisco's innovation strategy focuses on adding value to local products from fishing and agriculture, which has earned it several awards.

→ Flip obtains B Corp certification

The snack brand, the result of a project co-financed by the Copec-UC Foundation, has its own low-temperature frying technology, which retains 90% of the nutrients of fruits and vegetables, substantially reduces residual oil and makes it possible to fry vegetables that usually cannot be subjected to this process.

In 2024 it was certified as a B Company, a seal awarded by the U.S. organization B Lab, which recognizes companies that meet social, environmental, transparency and corporate responsibility performance standards. The evaluators highlighted Flip's innovative and environmentally friendly manufacturing processes, which were recently strengthened with an environmental best practices manual focused on the efficient management of energy, water and materials.

At the same time, aiming for a new phase of growth, the company has strengthened its position in domestic retail, with a presence in supermarkets such as Walmart, Tottus and Jumbo, as well as expanding into new sales channels through specialized distributors in regions.

→ New product offering

Nutrisco acquired in 2024 the U.S. brand LiveMore Superfoods, based in California, famous for its innovative blends of frozen organic fruits and vegetables for nutrient-rich smoothies. As such, LiveMore is also part of the functional food trend, which has a strong commercial projection. Prior to the acquisition, the subsidiary Valle Frío was already the exclusive fruit supplier for the North American brand.

ightarrow Golden Omega

The proposal of this Empresas Copec related company is based on the development and implementation of effective technological innovations in the world of Omega 3 fatty acids. To realize its vision, it has a team of scientists and engineers dedicated exclusively to research and development, state-of-the-art laboratories and a pilot plant.

The company has developed a new generation of Omega 3 purification and concentration processes with international patents and high-value trade secrets. As a result, its products offer high standards in purity and organoleptic quality.

ightarrow State-of-the-art production facilities

Golden Omega has a modern pilot plant for research and development of new and improved products. This allows a continuous process improvement, staff training and efficient delivery of new products and solutions to customers.

\rightarrow Agreement to distribute vegan Omega 3 in the United States

In August 2024, the subsidiary entered into an alliance with Benexia to market chia seed oil in the United States. Through this partnership, Golden Omega adds a new vegan, natural and sustainably produced Omega 3 oil to its portfolio. Benexia is a Chilean company with operations in Arica, like Golden Omega, and is one of the largest chia producers in the world.

State-of-the-art technology to care for the sea and ensure quality

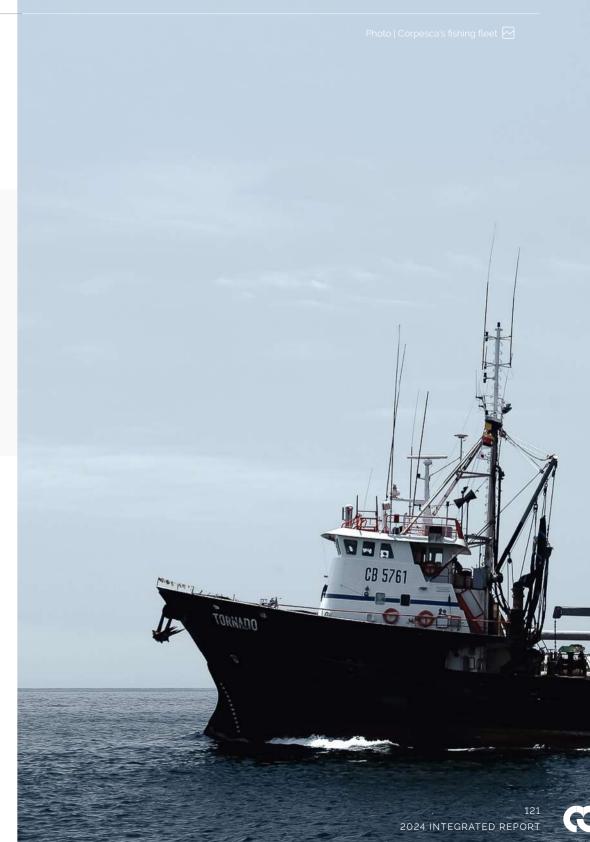

The extraction of marine resources - aquatic animals and algae - has increased in recent years. The call from global organizations, such as the Food and Agriculture Organization of the United Nations (FAO), is to establish measures to care for these resources, with a direct request to fishing companies around the world to strengthen the efficiency, inclusiveness, resilience and sustainability of aquatic food systems.

With the help of advanced technology, fishing companies can determine the place and quantity to fish, return protected species to the sea, meet extraction quotas and know the progress of a given production, all while guaranteeing the quality of the products. These types of techniques substantially optimize the efficiency and sustainability of fishing vessels and are already being applied by Nutrisco's Seafood business unit.

The Responsible Fisheries project (a pilot in collaboration with Sernapesca, in the Biobío Region) also uses this technology to remotely certify the capture of pelagic species (which live in areas far from the coast), thus ensuring compliance with the quotas assigned by law.

Moreover, the algorithms also monitor critical parameters such as temperature and storage conditions during transport and processing to ensure quality from the sea to the point of sale.

The implementation of technology is not limited to the sea: in processing plants, tools are used to identify species, sizes and weights during unloading, automating processes and improving accuracy in the certification of landings. In this line, the status of products is monitored in real time, helping producers and retailers to track, for example, expiration dates and rotate food efficiently in warehouses and stores.

The focus on innovation by Empresas Copec and its subsid- promotes the creation of strategic alliances between public iaries is not a recent development. In 2002, the Copec-UC Foundation was born, a strategic alliance between the company and Pontificia Universidad Católica de Chile to promote research and the development of innovative solutions to problems that are important for society. It holds annual competitions for young researchers and university students.

In addition, in 2014 it donated resources for the construction of the UC Anacleto Angelini Innovation Center to the same university. It is a space open to companies and enterprises that

and private entities focused on research and development and disseminates scientific and technological progresses in the area of natural resources. Empresas Copec continues to participate in the management of the center.

On the other hand, Empresas Copec has been supporting innovation since 2012 with the Anacleto Angelini Innovative Trajectory award, as part of the Avonni National Innovation Award. In 2024, the prize was awarded to Lemu's founder, Leo Prieto.

129 Innovative projects with technical and financial support

104 **Invention patents** in 17 countries

IT-based companies created \$ 14.520 billion Investment in R+D+I

Fundación Copec-UC

This initiative was created to strengthen the link between research conducted at universities and the needs of Chilean companies. It is composed of a board of directors and a specialized administration, which complement its management with an advisory board and a commercial committee, in addition to the advice of experts in technical, commercial, legal and intellectual property aspects.

The Fundación Copec-UC provides comprehensive support for the development of applied research, accompanying research teams at all stages of their projects. This support is provided by senior executives from Empresas Copec and academics from Universidad Católica, in addition to the foundation's own team.

International Seminar

Every year, Fundación Copec-UC organizes a seminar on topics relevant to the innovative ecosystem and society in general. In October 2024, the twentieth version of this event was held under the title "Artificial Intelligence and its impact". It included presentations by Claudia Fischer, from OpenAl; Shobhit Varshney, from IBM; Olivia White, from McKinsey, and Fernado Chomalí, Archbishop of Santiago and UC Grand Chancellor.

COPEC-UC FOUNDATION HAS TWO FUNDING LINES FOR R+D+I PROJECTS:

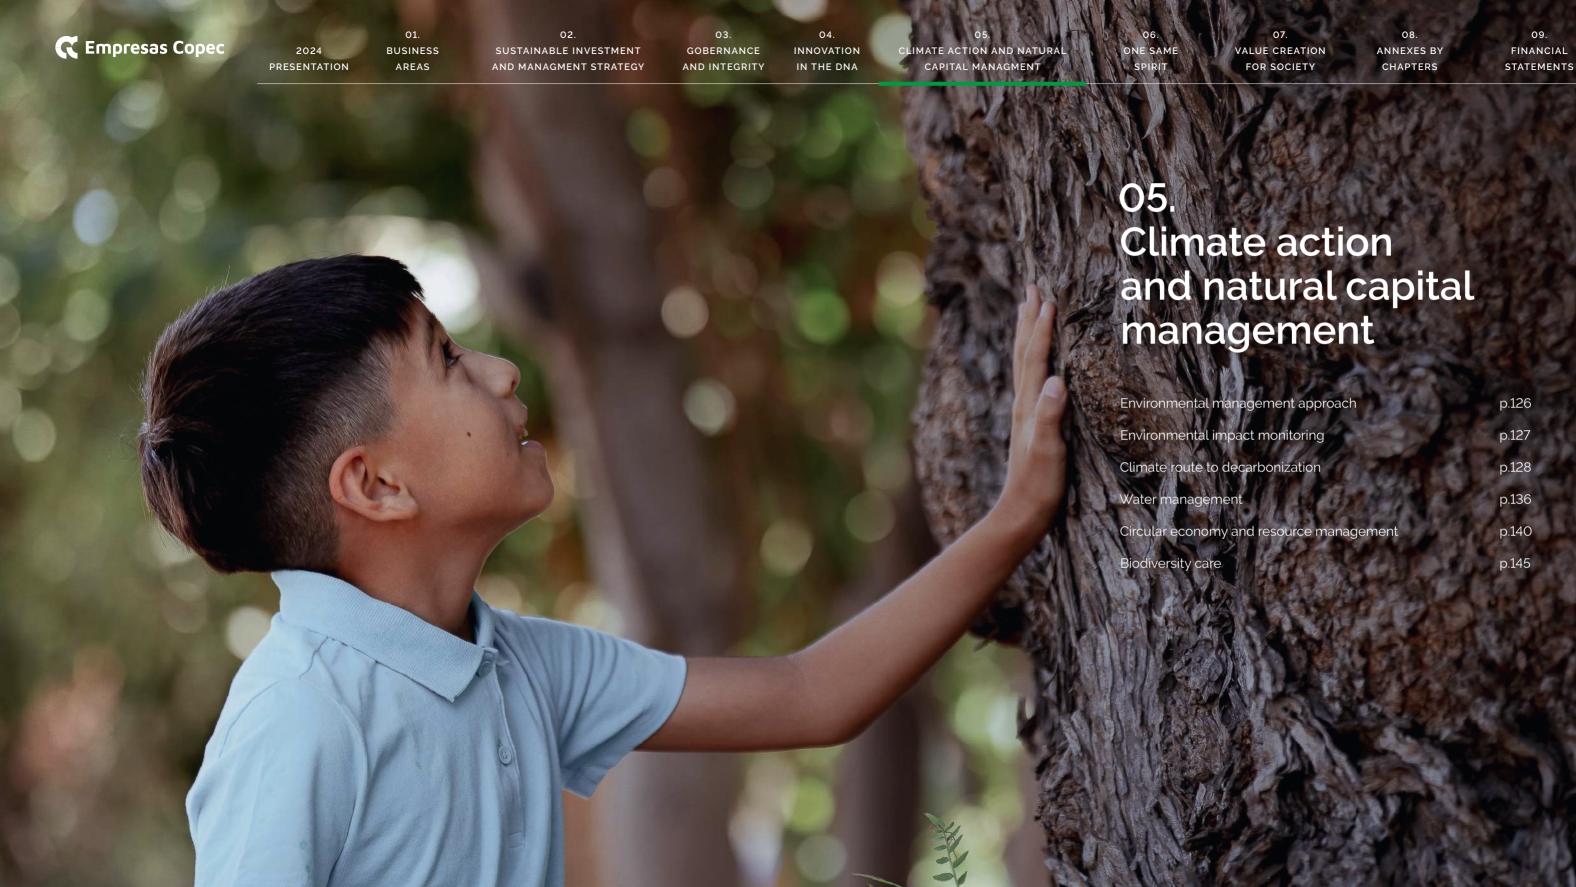

LINES OF FINANCING	DETAIL	REQUIREMENT
R+D to Innovate Contest Twice a year	→ Aimed at all types of legal entities or individuals with tax identification number and living in Chile (including universities, companies, research centers, foundations, startups, technology consortiums and individual entrepreneurs). Each winning project receives up to UF 4,000 over two years, with the possibility of accessing additional funding of up to UF 4,000 if the project's progress is promising and has a high impact potential.	→ Proposals must be innovative, technology-based, with industrial scaling potential and oriented to solve a relevant problem, mainly related to the natural resources and energy sectors. In addition, the solutions must be protectable through an intellectual property instrument and their main functionality must have been validated at the laboratory level. In the first semester of 2024, the three projects that benefited, among more than 100 applicants, were Modulo Kala, a biomaterial manufactured from corn residues; Espumógeno Ecológico, a firefighting product for urban and forest fires; and Cupratherm, a modular thermal energy storage device.
Apply Your Idea Contest Once a year	→ Aimed at undergraduate and graduate students in higher education. The contest distributes more than \$ 20 million in awards (one million for the winning idea and an additional \$ 2 million for the three initiatives with the highest scores), in addition to offering a workshop where the finalists acquire knowledge on innovation, business models, intellectual property, prototyping and other related topics. In the first instance, only a video pitch is submitted. Then the winners have the possibility of making an express application to the R&D to Innovate Competition.	→ Proposals should be innovative and aimed at solving a problem in the field of natural resources, be driven primarily by considerations of use and practical applications, and consider as an end point the development of a specific product or service.

Responsibility

Responsibility is the conscious commitment to assume the consequences of our actions. It is acting with respect for others and for our environment, making informed decisions that prioritize a positive impact. Being responsible implies recognizing our mistakes, learning from them, and seeking solutions that benefit present and future generations. Responsibility invites us to act ethically and to actively contribute to building a more equal and sustainable world, where every choice reflects our commitment to people.

Empresas Copec and its subsidiaries take care of the planet in their corporate investment and production decisions.

Empresas Copec's purpose is a statement of its beliefs and commitment to the well-being and prosperity of people. It means developing its business thinking not only about the current impact, but also about the future benefit, with investments aimed at solving the global challenges we face today as humanity.

The triple planetary crisis - climate change, pollution and biodiversity loss - represents a collective call to action that the company and its subsidiaries consider unavoidable. For this reason, they are implementing responsible operations, supported by an environmental management system with four main lines of work:

- → Climate change
- → Circular economy
- → Water resources
- → Biodiversity

Through its Sustainability Policy, Empresas Copec reaffirms its permanent commitment and responsibility to the sustainable management of its activities.

On the other hand, Empresas Copec has a risk management policy and method to identify risks, evaluate them, assess their impact, mitigate them and monitor them, in order to improve the decision-making process.

Empresas Copec and its subsidiaries operate responsibly and in harmony with the environment. To this end, they guide their performance in management systems that promote innovation, sustainable resource management and the reduction of atmospheric emissions. ARAUCO, Copec, Terpel, Abastible and their respective subsidiaries have environmental management systems certified under ISO 14001 and energy management systems certified under ISO 50001:2018.

The Company permanently promotes compliance with high national and international standards in this area, in order to reduce the possible impacts that may be caused by its activities,

products and/or services. In addition, it fosters an innovation culture to respond in a timely and efficient manner to the needs of customers, the market and the community, including environmental challenges.

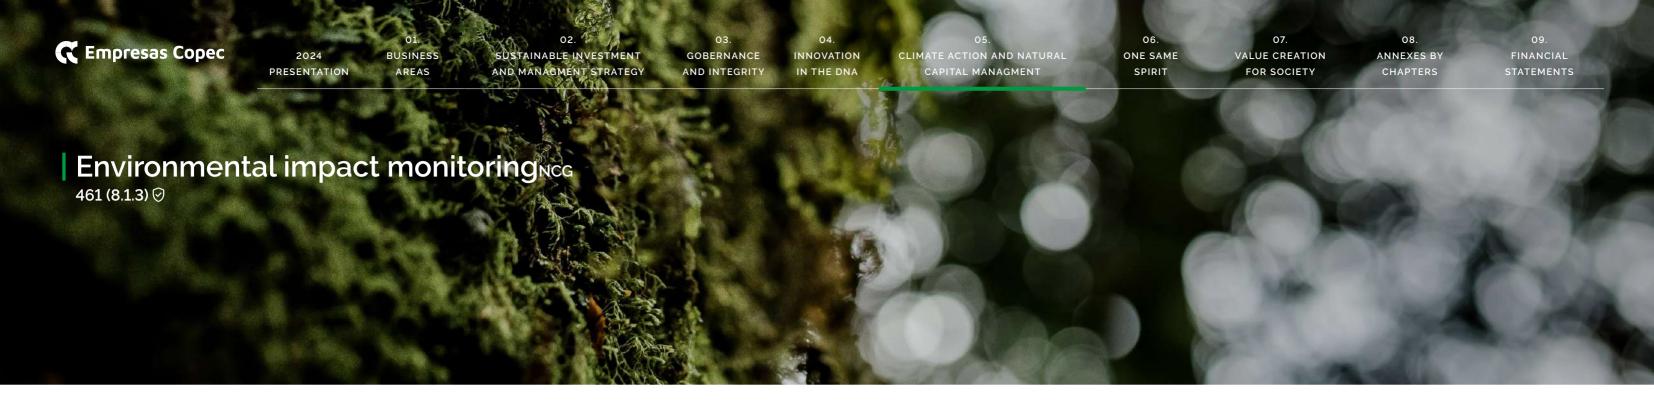

At consolidated level, environmental investment considered resources of US\$53.5 million, 39% less than in 2023. This difference is mainly due to the end of construction of ARAUCO's MAPA project, which is partially offset by the incorporation of the Las Salinas cleanup work in 2024

One of the actions that the Company carries out regarding its stakeholders is to provide ongoing training on sustainability issues.

The subsidiaries join Empresas Copec's commitment by developing actions and plans that enable the fulfillment of these objectives. The following are some of the initiatives carried out by the subsidiaries in this regard:

· Copec develops energy efficiency training programs for employees and external collaborators whose work is directly related to the organization's energy performance.

- ARAUCO's Environmental and Cultural Change Training Program provides training for employees in energy conservation, climate action and waste treatment. In 2024, the company also provided lectures and training, and active cleaning breaks were held in the work environment. In addition, clean points were set within the facilities and in neighboring communities.
- ARAUCO has a system for constant monitoring of the resource in the watersheds and has defined controls and mitigation measures to continue guaranteeing strict compliance with applicable standards, both for effluent discharges and for the safe supply of the plants.

Empresas Copec and its subsidiaries seek to operate in harmony with their natural environment. To this end, they develop management systems that not only comply with current environmental regulations, but also go beyond them, adopting practices and standards that exceed regulatory requirements and promote innovation, sustainable resource management and the reduction of operational emissions.

$\rightarrow \stackrel{\wedge}{A}$ FORESTRY SECTOR

ARAUCO's ongoing monitoring and evaluation system captures and provides information for forestry management. Regular evaluations and follow-up allow to warn of problems, highlight opportunities, draw lessons and guide efforts. Based on performance indicators, the subsidiary establishes work plans and specific actions for the continuous improvement of its processes, thus ensuring compliance with sustainable forestry management requirements and consistency with its corporate values.

→ ♦ ENERGY SECTOR

Copec has an Environmental Management System (EMS), which is externally certified according to ISO 14001 for three scopes: "Storage and distribution of fuels and lubricants in mining establishments", "Transportation of fuel, from loading, at the San Vicente and Concón plants, to delivery at Arauco plants located in Horcones, MAPA, Valdivia, Nueva Aldea, Constitución and Licancel" and "Sale, purchase and delivery of marine fuels to vessels that require it at ports along the national coast, by tankers, pipelines or trucks". It also conducts internal audits to ensure compliance with the parameters established in the system.

Terpel has an integrated environmental monitoring framework that facilitates the follow-up of the main indicators for impact and risk analysis, as well as their disclosure.

With its environmental management system, Abastible seeks to ensure that all processes comply with applicable regulations and maintain high operating standards. This mechanism is used to manage the operational and regulatory controls of each plant, emissions from electricity consumption, driving and generation efficiency, and waste treatment.

→ SECTOR ALIMENTOS

Nutrisco Seafood has a program of compliance with the General Law of Fisheries and Aquaculture (LGPA for its acronym in Spanish), covering its entire value chain, from the operations of navigation and supply of raw materials, processing, storage and transportation of products to their availability to its customers.

Environmental regulations in Chile

Under Law N° 19,300, companies are required to submit to the environmental authority environmental impact studies or statements for any project or activity (or significant modifications thereof) that may affect the environment, in accordance with the criteria of such regulation. In addition, they may only execute the projects or activities once these submissions are approved through an environmental qualification resolution (RCA).

This law and other related regulations also establish procedures for citizens to make observations on the content of the statements or studies submitted by project owners, and to challenge the validity of the RCAs. In this regard, affected citizens, public agencies and local authorities can demand compliance with environmental regulations in the event of damage to the environment.

Non-compliance can result in the revocation of permits, temporary or permanent closure of industrial facilities, fines and warnings.

In Chile, the development of the Viento Sur Wind To demonstrate the advantages of wood in construction, ARAUCO is participating in Farm project continues, with 43 wind turbines of up to 5 MW each, which received the Burgos Net Zero project, the first carbon-neutral building in Latin America, built authorization from the Committee of Ministers early 2024. The company also plans with laminated wood from the company's forests. Along with a series of energy efto build a wind farm in Los Angeles, a project that began its early citizen participation ficiency and renewable generation measures, the incorporation of wood offsets the stage in 2024. The future Sucuriú plant in Brazil will be self-sufficient in electricity and CO₂ emitted during its construction. will also generate an additional 220 MW of surplus power based on forest biomass. In addition, ARAUCO is the owner of E2E S.A., a company that provides cutting-edge building solutions for based on wood, with presence in Chile and Brazil. RELEVANT FIGURES • 14 power generation plants in the countries where the company operates • 1,078 MW of maximum installed capacity 905 MW of installed capacity in Chile • 6 generation plants registered under international standards, such as the Clean Development Mechanism (CDM).

Energy sector

COMPANY	ENERGY EFFICIENCY AND LOW CARBON SOURCES	LOW CARBON PORTFOLIO
Copec	The subsidiary Copec is implementing its Carbon Footprint Management Plan to achieve carbon neutrality in 2030 and reduce 40% of Scope 1 and 2 emissions compared to the business as usual scenario. It includes different initiatives, such as renewable energy contracts, fleet electrification, solar panels at service stations and air conditioning in convenience stores, among others. → Environmental investments to optimize operations The subsidiary obtained the Giro Limpio seal in 2024 from the Energy Sustainability Agency and the Ministry of Energy. This is a new milestone in its efforts to reduce the carbon footprint of fuel and lubricant transportation. During the year, more than 75% of its products were transported by carriers with this seal.	tion. The strategy is to have a comprehensive offering that includes everything from the generation and sale of green energy to energy efficiency and storage services. To this end, it has invested in leading global energy intelligence companies through its Wind Ventures investment fund, in addition to the Wind Garage innovation platform. Generation and marketing of renewable energy Granja Solar: To strengthen its electricity supply business, Copec acquired the Granja Solar photovoltaic farm in Tarapacá, Chile, in 2024. The US\$91 million investment includes an electrical substation and a 23.4 km transmission line connected to the SEN. The plant has a generation capacity of 123 MWp; moreover, starting in 2026, it will have a BESS battery system with a storage capacity of 420 MWh and an injection capacity of 105 MW, which will ensure a stable and continuous supply. Transelec is responsible for the construction and operation of the system, while EMOAC, a subsidiary of Copec, is responsible for energy sales.

COMPANY ENERGY EFFICIENCY AND LOW CARBON SOURCES

LOW CARBON PORTFOLIO

Copec

→ Renewable energy operations

Copec service stations in Chile have the Carbon Neutral seal, the result of a strategy that combines the measurement and certification of its carbon footprint, the use of non-conventional renewable energies and the purchase of carbon credits.

The subsidiary also continues to deploy the My Footprint program, which through the Copec App proposes customers to contribute to offsetting their emissions from fuel consumption (both those emitted by burning fuel and those from production processes) by purchasing carbon credits from sustainable projects, in a 1 + 1 format: the company pays 50% and the customer pays the other half.

RELEVANT FIGURES• 8 stations with solar panels

- 65 stations and 5 plants supplied with renewable energy from Cerro Dominador
- Compensation bonds in Luz Norte (solar project in Chile), Tambopata
 Bahuaja (forestry project in Brazil) and Santa Clara (wind project in Peru).

One of the milestones of 2024 in the reduction of emissions was the beginning of the implementation of the first hybrid truck for transporting lubricants in Chile. Under this initiative, a diesel truck was modified to be assisted by an electric engine, which is expected to reduce fuel consumption and its carbon footprint by 15% to 20%.

In addition, its subsidiary Blue Express has been awarded the IMELSA Energía Green Seal, which accredits the use of green energy in its operation.

- Expanding the use of solar energy: Copec Flux and Chilean fintech Galgo have partnered to facilitate the incorporation of solar panels in homes in the Metropolitan and Valparaíso regions. The agreement will allow Flux customers to acquire panels 100% digitally, without the need for an initial investment.
- Renewable diesel: Copec completed the first import in Chile of diesel made from hydrotreated vegetable oil, which is obtained from vegetable oils and animal fats. It
 emits up to 95% less CO₂ compared to fossil diesel, making it an alternative for industries with high energy consumption. Initially, this fuel was used in the primary fleet
 of trucks supplying mining clients in Mejillones, Antofagasta Region.
- Green hydrogen: The startup H2Pro is developing low-cost electrolyzers, while Copec plans to incorporate green hydrogen in the ground operations of the Nuevo Pudahuel airport by 2025 and in zero-emission airplanes by 2035.
- Synthetic fuels: Copec announced its investment in the German company Ineratec to develop synthetic fuels based on hydrogen and captured CO₂, a sustainable option to decarbonize industries that cannot be electrified.

→ Renewable energy storage

• Agreement with Grenergy: Under an overnight sales contract signed in 2024, the global clean energy company Grenergy will supply Emoac with 8 TWh for 15 years. Thus, the Copec subsidiary strengthens its position as a leader in storage. This technology makes it possible to capture renewable energy and inject it at night, making it a pillar of the decarbonization of the electricity system.

→ Energy efficiency

- Intelligent motors: Copec Emoac successfully implemented more than 600 Turntide efficient motors at Walmart in the Metropolitan Region, a project that will continue to expand with more than 300 motors for other regions of the country. This technology saves up to 30% in energy consumption for air conditioning.
- In 2024 Copec also invested in Optibus, software driven by artificial intelligence and optimization algorithms available in the cloud, which operates public transportation systems to make them more efficient. It has presence in 5,000 points globally, including the Metropolitan Region.

→ Electromobility

- Copec Voltex is a leader in electric vehicle charging infrastructure, with a network covering more than 2,200 kilometers in Chile, where it operates the largest electric vehicle charging terminal in Latin America. It also has fast charging stations in Panama, Ecuador and Colombia.
- New electro-terminal: The subsidiary announced the construction of an electro-terminal in Penco, Biobío Region, which will have eight high-power chargers. It will be the first of its kind in southern Chile and will replicate those already existing in Santiago and Antofagasta. The initiative is part of the "Renueva tu micro" program by the Ministry of Transport and Telecommunications.
- Bidding: Copec Voltex was awarded 70% of the new charging infrastructure in the last bidding process for public transportation in Greater Santiago, which will allow the construction of 14 new electro-terminals that will supply 895 electric buses. In addition, the renewal of the fleet of two operators (Metropol and Vule) was awarded, adding seven new terminals, equivalent to a total of 1,418 buses. This translates into a 58% market share in the Metropolitan Region. In addition, we acquired the first electroterminal outside the Metropolitan Region, in Concepción.

2024 INVESTMENT

US\$ 9.4 million in environmental investment. 28% less than in 2023.

COMPANY **ENERGY EFFICIENCY AND LOW CARBON SOURCES**

LOW CARBON PORTFOLIO

Abastible

→ Renewable energy operations

The Concón facility has a photovoltaic plant with an installed capacity of 118 kW, connected to the SEN under the Small Means of Distributed Generation (PMGD) regulations. It covers 25% of the plant's electricity consumption and reduces emissions by 53 tCO₂ per year.

→ Energy transition

Liquified gas (LPG), composed mainly of butane and propane, has a lower carbon footprint than diesel, coal and wood, which are still used in Latin American industries and households. For this reason, it is considered a transition gas for developing economies, as it allows them to reduce their footprint while they move towards energy systems based on NCRE. In this scenario, Abastible has positioned itself as an energy partner for customers who want to incorporate LNG in their production processes. The subsidiary not only supplies gas, but also advises them on the transformation of their matrices.

- Boiler replacement at Corpesca: One of the most important projects in 2024 was the replacement of an oil-fired boiler with a LPG system at one of Corpesca's plant which is intensive in the use of energy.
- Import facility: Colgas, a subsidiary of Abastible, began construction of new infrastructure for importing LPG into Colombia in 2024. It will be located at the port of Okianus Terminals, in Cartagena de Indias, and is expected to start operations at the end of 2025. The US\$60 million investment will guarantee the supply of LPG to the Colombian market, with a focus on the energy transition.

→ Generation and marketing of renewable energy

For decarbonization and energy efficiency solutions not based on LPG, the company launched AbastibleTec in 2024, which already offers several service alternatives, such as optimization of thermal power plants; design, construction and operation of photovoltaic plants; electricity supply with 100% renewable energies; support in the transition to electric mobility; and monitoring platforms with artificial intelligence to predict and optimize processes behavior. It also studies new and innovative solutions:

• Green hydrogen (H2V): Together with the Ministry of Energy, AbastibleTec is a pioneer in the development of engineering and design of industrial-scale H2 and LPG blending projects. In 2024 Abastible and electricity company Comasa agreed to carry out a carbon neutral fertilizer production project using green ammonia (obtained from hydrogen), biogenic CO2 and bio-ash from biomass generation plants, partially financed with a Corfo fund.

2024 INVESTMENT

US\$ 700 thousand in environmental investment, 55% less than in 2023.

COMPANY	ENERGY EFFICIENCY AND LOW CARBON SOURCES
Nutrisco	→ Renewable energy operations In 2024, Nutrisco Seafood achieved 100% renewable electricity supply for its plants in Coronel and Coquimbo thanks to an agreement with EMOAC.
2024 INVESTMENT	US\$ 669 thousand in environmental investment, 59% less than in 2023.

Carbon footprint management GRI (305-1 / 305-2 / 305-3) ♥

ARAUCO was certified as the world's first carbon-neutral forestry company in 2020.

The carbon dioxide that it captures in its forests and wood products exceeds its global emissions. The company certifies carbon capture with PwC and carbon neutrality, with Deloitte.

Copec was able to neutralize CO_2e emissions from its service station in 2021, a milestone certified by Carbon Neutral.

Compensations carried out through the My Footprint program are verified by SCX.

The Group's greenhouse gas (GHG) emissions are consolidated according to an operational approach and verified by Deloitte. In addition, each subsidiary carries out its own verifications:

$\rightarrow \stackrel{\wedge}{\square}$ FORESTRY SECTOR

ARAUCO audits and certifies its carbon footprint on an annual basis with AENOR, including scopes 1, 2 and 3. In 2024 the company worked on adding downstream measurements of scope 3 to the footprint, which contemplate aspects of the life cycle of its products.

→ ∳ ENERGY SECTOR

Copec measures its footprint in scopes 1, 2 and 3. The measurement of the first two is verified in accordance with ISO 14064/2018 standards. Scope 1 includes fuel consumption

in generators, company vehicles (trucks, vans, ships), boilers (natural gas) and third-party trucks that provide exclusive services to Copec, as indicated in the IPIECA guide. Meanwhile, Scope 2 considers electricity consumption in service stations, convenience stores, production and storage plants, offices and distribution centers. Scope 3 encompasses indirect emissions occurring in the company's value chain, including those from processing of products sold, energy lost in electricity distribution, the outsourced transportation (except for fuels and lubricants), business travel, and waste from stations, distribution centers, offices and plants.

Abastible measures and verifies its carbon footprint through Bureau Veritas under the ISO 14064 standard. The calculation incorporates its activities within scopes 1 and 2, and those of the value chain in scope 3, including data on energy consumption, water use, waste disposal and transportation, among others.

☑ Indicator verified by Deloitte. For more information see section "External verification" in chapter 8.

^{1.} The increase in Scope 3 emissions is attributed to the forestry and energy sector. On the one hand, there was an update in the calculation methodology in the shipping industry that impacts the emissions associated with the transportation and distribution of products of the subsidiary ARAUCO, and the increase in the acquisition of fertilizers for application in new forests. On the other hand, the subsidiary Terpel recalculated its footprint due to certain factors such as the update of CO₂ emission coefficients in Scope 2 and the reclassification of some emission sources, transferring emissions from Scope 3 to Scope 1.

In identifying opportunities for improvement, Terpel focused on the consolidation of emissions from the energy consumption of the Voltex and Gogoro business lines were analyzed, as well as emissions generated by the transportation and final disposal of waste.

STATEMENTS

Carbon footprint reduction targets

Empresas Copec S.A. declared in 2021 the goal of achieving carbon neutrality by 2050. The goal includes scopes 1 and 2, and the most relevant elements of 3. For their part, the subsidiaries carry out actions in response to climate change and systematically manage annual GHG emissions, with medium-term goals aimed at the final objective.

GOALS BY SECTOR

∳ ENERGY SECTOR	GOALS	2024 PROGRESS
Copec	→ To be carbon neutral by 2030, considering scopes 1 and 2.	In progress
	→By 2050, most of EBITDA should come from the trading of renewable energies and businesses other than fossil fuel distribution.	In progress
Terpel	→ To be 50% carbon neutral by 2030 and totally carbon neutral by 2050, considering scopes 1 and 2.	In progress
FOOD SECTOR		
Nutrisco	→ By 2025, develop a decarbonization plan in its three scopes for the entire group.	In progress
	→ By 2026, Orizon Seafood seeks to reduce 40% of the corporate carbon footprint of scope 1 and 2 with 2020 as the baseline.	In progress

Water management

Water monitoring and management are critical activities in a RELEVANT FIGURES global scenario of increasing water scarcity. Although not all the operations of the Group's subsidiaries are located in areas of water deficit, in locations with water stress, specific actions are developed for an adequate operation in balance with the • 186.4 million m³ extracted at the consolidated level, 3% more available natural capital:

- → Application of technological innovations and mapping of the water situation in the areas where each subsidiary operates to reduce operational risks and negative impact.
- → Monitoring of water consumption in all of the company's businesses according to the extraction source and its effluents.
- → Increasing the proportion of seawater consumption through the use of desalination technologies to reduce the extraction of fresh groundwater.

- There were no incidents of non-compliance with technology-based water quality permits, standards and regulations in 2024.
- than in 2023.
- 29% of the freshwater withdrawn in 2024 came from areas with initial high and/or extremely high water stress.

GOALS BY SECTOR

BUSINESS AREA	COMPANY	GOALS
☆ FORESTRY SECTOR	ARAUCO	→ Make progress in strategic and efficient water management.
☆ ENERGY SECTOR	Copec	→ Reduce consumption by 30% by 2025.
FOOD SECTOR	Nutrisco	→ In 2025, actions will be implemented to improve the measurement of the water footprint, based on the results of the water footprint measurement pilots at Orizon Coronel and Valle Frio Romeral.

☆ Forestry sector

Forests and forest plantations have beneficial effects on the hydrological cycle: they help retain moisture, reduce soil loss, regulate riverbed temperature, promote osmosis and improve water quality.

The forestry plantations do not use irrigation water, while the company's industrial facilities are supplied with surface or groundwater. ARAUCO promotes its sustainable use to ensure its provision for flora, fauna and human development. In this regard, it manages and protects the rivers from where it extracts the resource through rigorous monitoring of its availability and responsible management practices, applying a policy of delimiting and prioritizing watersheds. In 2024, it continued to implement projects and plans to reduce consumption and increase water efficiency.

→ Liquid effluent management (riles) generated in industrial plants

The tailings are subjected to treatment systems and constantly monitored to ensure that they do not exceed the maximum concentration and load levels regulated by environmental standards. Likewise, there are also scientific research programs associated with sampling and measurement of some relevant environmental variables.

All of ARAUCO's industrial facilities have primary and secondary treatment for liquid effluents. In two of them, located in Chile, tertiary treatment is added:

Valdivia, on a permanent basis, and Nueva Aldea, when the effluent is discharged into the river and not into the sea.

In addition, the subsidiary is working on the development of alternatives for the recirculation of effluents to processes. A pilot project for the treatment and recirculation of effluents in the industrial facilities of the pulp and energy area to avoid their disposal in rivers and the sea, is currently in the research stage.

→ Water Challenge

For more than a decade, ARAUCO has been developing the Water Challenge management strategy in Chile, which involves collaborative work with the community and the authorities. It has already supported more than 55,000 people through 145 collective solutions to gain access to drinking water, providing studies, engineering and even land for the development of small and large projects. In addition, it is working on enabling methods to measure the parameters of the water flowing in nearby forest watersheds.

Energy sector

The subsidiaries in this sector consume water from the grid, groundwater and tanker trucks in operations that include administrative and production areas, service stations, stores, plants and storage.

The operations of the subsidiary Copec are not intensive in the use of the resource. However, it carries out initiatives related to water management, mainly limited to irrigation, sanitary services and food preparation, with which it aims to reduce its consump-

tion by 30% by 2025. The goal is to implement 160 sustainable gardens (with efficient irrigation and species that require less water) at service stations. During 2024, Copec added seven new gardens, reaching a total of 65. In the same line, its three Lavamax laundry system formats have efficient use systems.

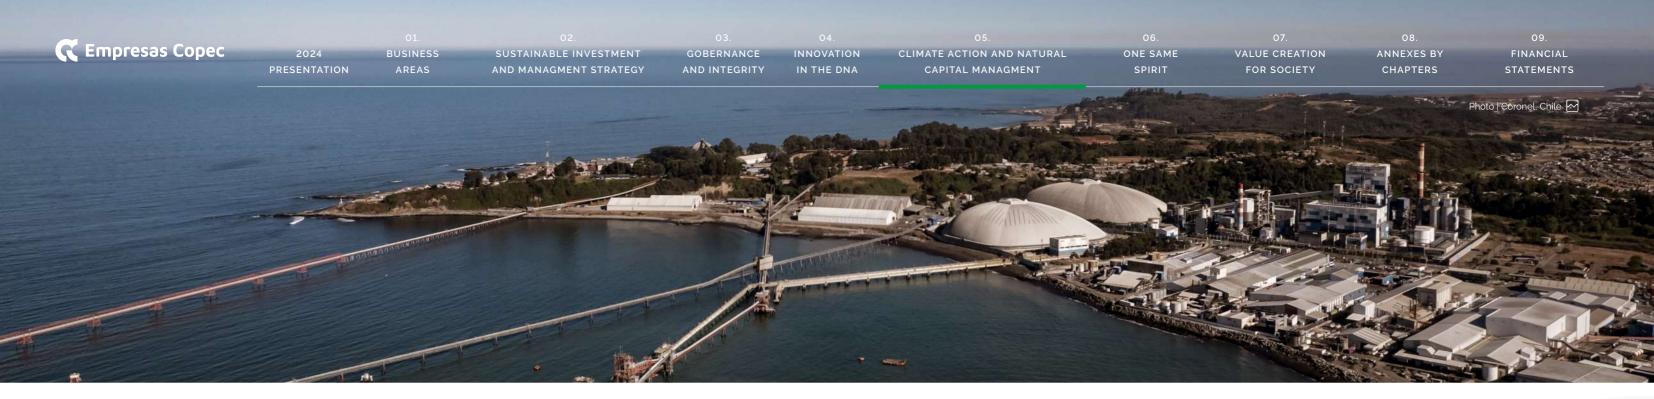

As for Copec's plants, the Pureo plant in Calbuco has a rainwater collection system that provides about 70% of the necessary supply.

→ New plant that extracts drinking water from the air

In 2024 Copec started up a plant that uses solar energy to con- RELEVANT FIGURES. In 53 service stations, garden irrigation dense pollutant-free water vapor from the air. The pilot was set up in October at the Copec service station on Route 68, in the the startup Source Global. The plant has the capacity to produce more than 250 liters of water per day under optimal conditions.

comes from the reuse of sewage water through treatment plants. 58% is treated with worm filter technology.

municipality of Pudahuel, Santiago, through a partnership with • 109.3 thousand m³ of water saved in 2024 thanks to sustainable landscaping.

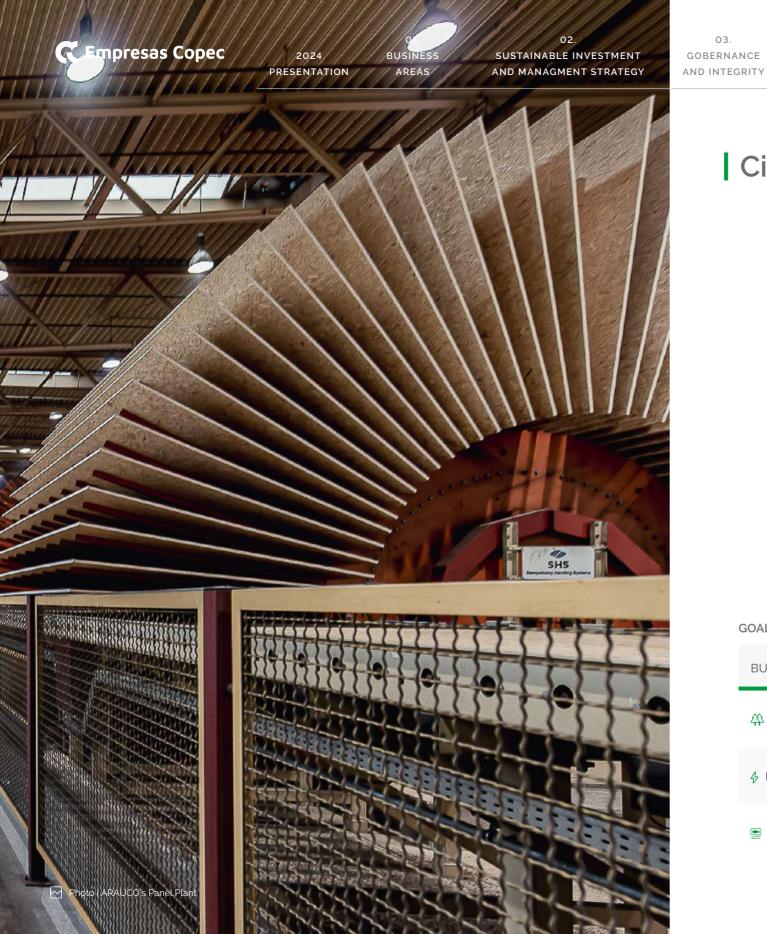

Nutrisco Seafood extracts seawater from the bays of Coronel and Coquimbo for the production of frozen fish, canned fish, fishmeal, fish oil and for its fleet. The rest of its facilities are supplied with potable water from the sanitary network.

The largest consumption is concentrated in flour production, raw material unloading, and the production of canned and frozen fish, processes that also generate riles, or liquid wastes that are treated with a physico-chemical process before being discharged through the outfall. In addition, the subsidiary carries out monitoring campaigns through the Environmental Surveillance Program (PVA) with other companies to determine environmental conditions of the riles from the coastal area adjacent to the submarine outfall.

→ Golden Omega inaugurated a desalination plant in Arica

With these facilities, which began operating in January 2024, Golden Omega will be able to supply itself with treated seawater and reduce its demand from the public network. This is the first plant of its kind in Arica.

The facility has a capacity to generate about $1,000 \text{ m}^3$ /day of desalinated water, equivalent to the daily consumption of 6,500 people.

Circular economy and waste management

The Company's management of hazardous and non-hazardous waste is based on three pillars: compliance with applicable regulations; the search for efficiency in the processes of waste removal, transportation and disposal; and measures to minimize • 40% of waste was recycled in 2024, 16% more waste generation. Subsidiaries in all sectors have established revaluation goals to become companies with zero waste at final disposal in the medium term.

RELEVANT FIGURES • 20,968 tons of hazardous waste generated in 2024, 21% less than in 2023.

- 1,093,216 tons of non-hazardous waste generated in 2024, 53% more than in 2023.
- than in 2023.

GOALS BY SECTOR

BUSINESS AREA	COMPANY	GOALS
	ARAUCO	 → Zero non-hazardous waste to final disposal by 2030. → The goal is global and includes all countries where the company is present.
∳ ENERGY SECTOR	Copec	ightharpoonup Zero waste by 2029 in operations associated with plants, service stations and convenience store in Chile.
FOOD SECTOR	Nutrisco Seafood	→ By 2025, define sustainable packaging and sourcing guidelines. In addition, they will identify new initiatives and partnerships for the circular economy.

☆ Forestry sector

focus is to reduce, manage, reuse and recycle waste, in line with Chile's circular economy model. To achieve its 2030 goal, it is implementing a management plan with four main objectives:

- → Optimize the use of resources and inputs.
- → Reduce the volume of waste generated.
- → Provide market opportunities for waste managers, recyclers and revaluators.
- → Involve employees and the community in achieving the environmental and social benefits of this management.

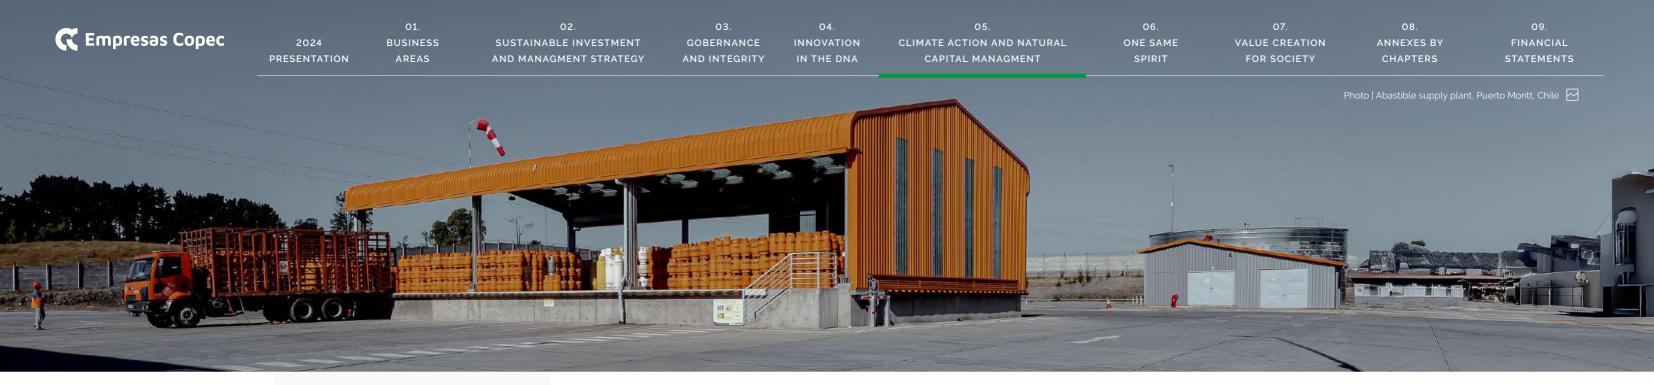

In 2024, further progress was made towards the goal. Key to these efforts have been the recovery centers at the Valdivia and Constitución pulp mills, where process waste mainly ashes from the power boiler and impurities from the causticizing area, are

As part of its environmental commitments, ARAUCO's strategic mixed to generate two types of products: a soil improver (substrate) for agricultural use and a seal layer for sealing sanitary tanks. In addition, work with external valorizers and the direct use of some waste as filler material or input for paving stones, among other purposes, are encouraged.

> In the timber business, the company seeks to develop a treatment process for non-recyclable waste, so that it can be co-processed or revalued, including bark. In addition to creating internal initiatives and capabilities, alliances have been signed with startups, local universities and other research centers.

The removal, transportation and disposal of hazardous waste from industrial plants is carried out by specialized and authorized entities, in accordance with the regulations.

was recovered in 2024 in the pulp, energy and timber business.

Energy sector

The subsidiary Copec revalues its waste in nine plants thanks to the implementation of infrastructure, training plans and synergies with specialized waste managers. It also installs waste management points at service stations and convenience stores, where the number of tons of waste that are revalued increases every year.

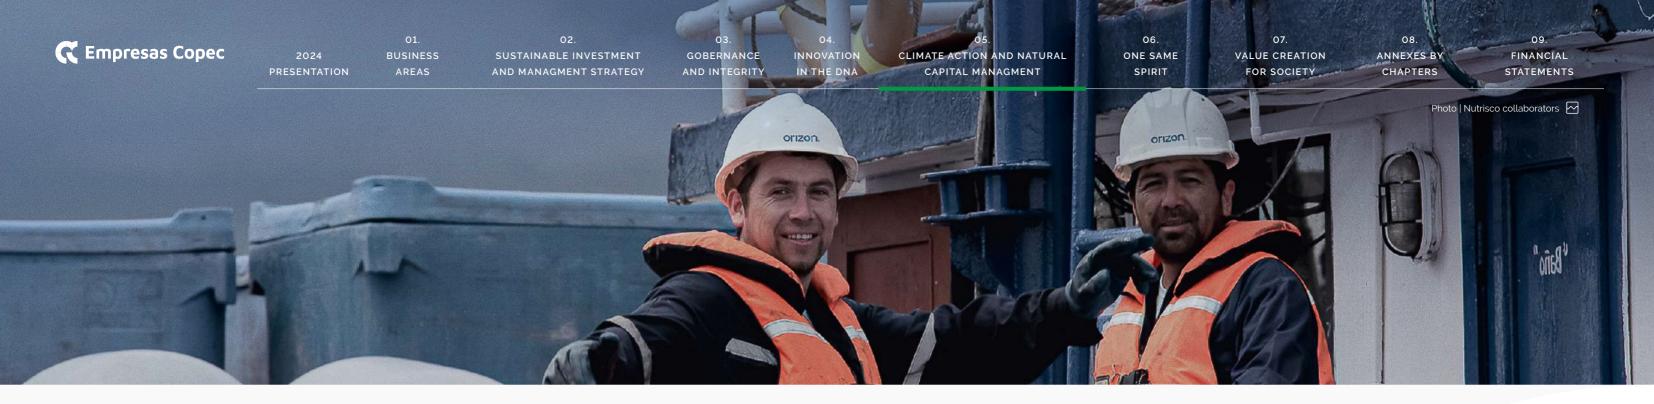

Regarding organic waste, the company has a partnership with Food For Future to transform it into animal feed, and in collaboration with Rendering, it reuses frying oil as a supply for the production of biodiesel. In 2024, they managed 196 tons of oil, reaching, since 2012, the recycling of 1.4 million tons.

RELEVANT FIGURES • 2.076 tons of waste recovered in 2024. 101% more than in 2023.

• The entire Pronto store network has waste management points.

Terpel is also developing initiatives to extend the life cycle of Abastible is working to reduce the amount of waste sent to containers and packaging materials. The greatest opportunities are in the lubricants and convenience store businesses. One example is Green Pass, a program designed for the proper man- employees' casino is processed. This is converted into a liquid agement of these products from manufacture to final disposal. The goal is to collect 30% of the containers sold in its stores by 2025. On the other hand, the Colombian subsidiary is committed to reducing 95% of plastic in processed food packaging materials in stores by 2025 and 100% by 2030.

landfill with initiatives such as the implementation of a biodigester at its Maipú plant, where all the organic waste from the with the necessary characteristics to be discharged into the sewage system. In addition, in 2023 it conducted an exhaustive review of its facilities to identify non-hazardous assets that are in disuse or obsolete.

Food sector

Nutrisco Seafood's fleet is certified by the Sustainability and Climate Change Agency (ASCC) in compliance with the goals and actions of the Clean Production Agreement "Sustainable management of solid waste assimilable to household waste in industrial fishing vessels". The purpose of this agreement is to reduce the production of this type of waste in the operations of the Cerco Sur fleet in order to prevent and minimize impacts on the marine environment.

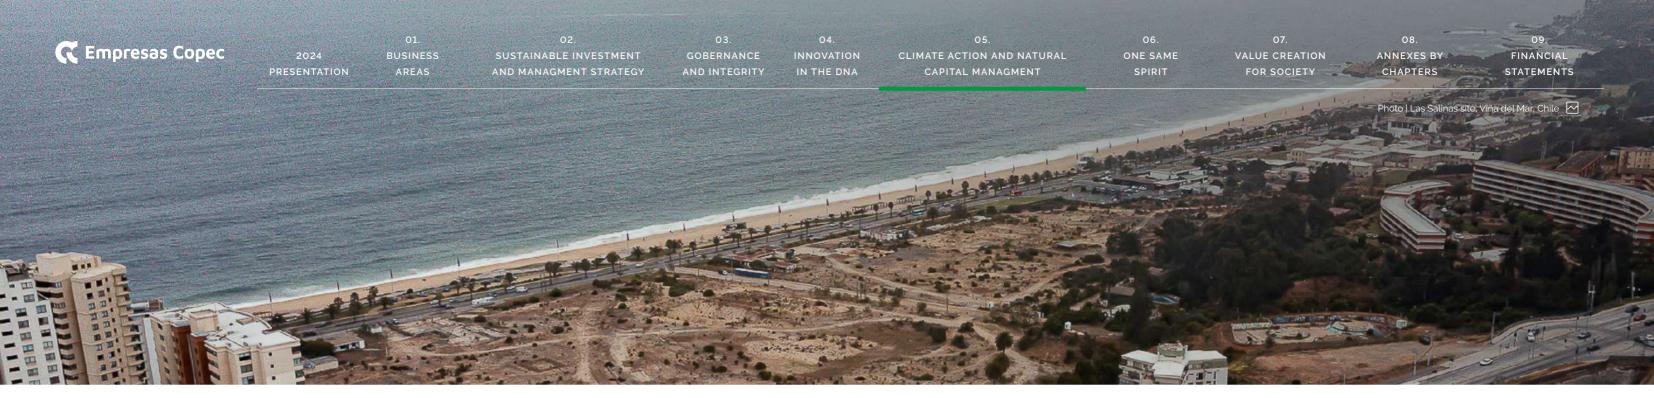

In addition, it is carrying out the Zero Garbage to Landfill project, which consists of identifying, segregating and properly disposing of waste in order to increase its recovery. As part of this initiative, recovered fishing nets are donated to the NetPositiva recycling

program so that the Bureo company can later convert the plastic obtained from these nets into products such as skates, sunglasses, chairs, hats and jackets for the Patagonia brand.

Flip uses recyclable packaging and manages its waste through two companies: Rendering for oils and Caja Verde for organic waste, wood, paper, etc.

Golden Omega, supported by Reciclos, is the first company in Arica to use composting to recover organic matter from its workers' casinos to produce agricultural fertilizer.

RELEVANT FIGURES• In 2024, 17.2 tons of fishing nets were converted into raw material for new products and 130.7 tons since the beginning of the program.

Las Salinas Project

→ Soil bioremediation at the service of the community

In December 2023, Las Salinas disclosed its urban vision for the future of the 160,000 m2 site located on the Viña del Mar coastline, where a hydrocarbon storage center was formerly located. The proposal, called Las Salinas VA!, is the result of 20 years of work, during which more than 5,500 consultations and 1,000 meetings were held with different organizations to gather the community's wishes and generate the basis for an agreement on the final destiny of the site.

Among the main characteristics of this vision is that more than 40% of the land will be destined for public use, including a park of about two hectares and green areas to connect the waterfront with the upper sector of Viña del Mar. It also proposes the development of medium-height buildings to protect the surrounding views.

In May 2024 concluded the bidding process called by the real estate company for the final cleanup of the first part of the site (South), a necessary action for the subsequent urbanization. French company Séché Group was awarded the contract, in which IDOM will also participate as project manager, providing technical advice and field monitoring.

Soil cleanup will be carried out by means of bioremediation, a technique that uses microorganisms present in the soil to degrade contamination. During the year, detailed engineering and initial works began, including a topographic survey, the use of geodetection technology in the contour, perimeter enclosure, and noise mitigation works.

Once the remediation of the first part is initiated, a process that will take about two and a half years, work will begin on the bidding for the second half. The complete remediation of the 16 hectares could be completed by 2030.

New subsidiary Remedia Green Tech

The experience gained through the Las Salinas project is relevant not only for Viña del Mar, but also for the country, as it represents a possible route to address the recovery of more than 10,000 sites with different levels of contamination in Chile. For this reason, Las Salinas created Remedia Green Tech, a company that will gather all these learnings to apply them in three lines of business: the sustainable transformation of land with real estate potential, consultancy for industrial land and environmental remediation in the mining sector. The new firm already has contracts in three regions.

Biodiversity care

Empresas Copec's subsidiaries with the greatest impacts have established commitments to promote biodiversity conservation in their direct operations and in the development of new businesses, without deforesting or degrading the forest or native vegetation.

We are aware of the role that biodiversity plays in sustaining the well-being of people and economic activities. To this end, a first step was taken by conducting a self-diagnosis of biodiversity impacts and dependencies for Empresas Copec. The expectation is to extend the approach to subsidiaries and align ourselves with the recommendations of the Task Force on Nature-Related Financial Disclosures (TNFD) and other international standards.

Biodiversity Action Plan

In 2024, Copec, ARAUCO and Nutrisco joined the strategic committee in charge of designing the Corporate Biodiversity Action Plan, promoted by the Ministry of the Environment and Acción Empresas. The public-private initiative aims to involve the private sector in environmental conservation, aligning it with global and local goals.

Financed by the Global Environment Facility (GEF), the plan has several participatory bodies, including a working group and macro-zonal workshops. The results of the multi-sector roundtable were presented at the COP16 on Biodiversity, held in October 2024 in Colombia.

Chile is the fourth country in the world to implement such a program.

GOALS BY SECTOR

BUSINESS AREA	COMPANY	GOALS
	ARAUCO	→ Restore 25,000 hectares of native forest in Chile by 2050 and maintain the percentage of certified assets above 95%.
∳ ENERGY SECTOR	Copec	→ Preserve the biodiversity of 39 ecosystems near the company's operations by 2034.
FOOD SECTOR	Nutrisco	→ By 2025, identify key biodiversity impacts and dependencies.

☆ Forestry sector

In 2003, ARAUCO made a voluntary commitment not to replace native forest or encourage its replacement by third parties. In this regard, the company has developed protocols and policies to guarantee the protection and conservation of biodiversity, including:

- The application of a certified forest management scheme that aims to ensure that plantations grow faster than the harvest rate. In this way, an environment is created that allow the transit of most species, in an integrated landscape that reconciles the care for biodiversity, ecosystem services and economic development.
- The connection, by means of watercourses, of the sectors of native or protected vegetation located within the subsidiary's patrimony.

- Continuous research and monitoring of the status of native flora and fauna in areas of high conservation value, to detect possible threats and activate management and protection plans.
- The commitment to account for and inventory the natural capital found within the company's assets.

 As highlighted in the "Innovation in DNA" chapter of this report, the subsidiary has a satellite to monitor biodiversity, Lemu Nge
- The implementation of a restoration program.

In February 2024, ARAUCO signed an agreement with Conaf and Universidad de Concepción to generate key information to preserve the Nonguén Park, whose native forest represents the native biodiversity of the Biobío Region. Sensors, geographic information systems, cameras, drones and artificial intelligence, as well as LiDAR and hyperspectral imaging technologies will be used to produce three-dimensional maps where it will be possible to identify species and forest heights. Thanks to these

resources, Universidad de Concepción will carry out research to generate relevant knowledge, while Conaf will have more information for proper park management.

As highlighted in the "Innovation in DNA" chapter of this report, the subsidiary has a satellite to monitor biodiversity, Lemu Nge or "eye of the forest", which is capable of identifying changes in ecosystems through a high-definition hyperspectral camera.

In August, the company also joined the global campaign "It's now for nature", led by Business For Nature, a coalition of organizations and companies committed to reversing the loss of nature and achieving a positive economy for the environment and humanity by 2030. The campaign encourages companies and financial institutions to develop and publish a nature strategy. ARAUCO's strategy has already been approved by the entity. (2)

RELEVANT FIGURES• 91% of ARAUCO's assets are certified.

• 17,199 hectares in the process of restoration.

FINANCIAL
STATEMENTS

→ ARAUCO at COP16 on Biodiversity

Between October 21 and November 1, 2024, the 16th edition of the world's most important biodiversity summit was held in Cali, Colombia: United Nations COP Convention on Biological Diversity (CBD). Once again, ARAUCO was present. Juan Andrés Anzieta, manager of Forests and Sustainability, and Pablo Ramírez de Arellano, senior researcher of Ecosystem Management, represented the company on ten panels of experts and leaders, where solutions were discussed and experiences shared on the challenges facing biodiversity. Among other matters, ARAUCO disclosed for the first time the results of the measurement of the natural capital of its biological assets in Chile.

On November 13, at ARAUCO's offices in Santiago, Chile, the event "Biodiversity on the corporate radar: Lessons learned from COP16" was held to show the results of the summit. The event was attended by spokespersons from the Global Reporting Initiative (GRI), Acción Empresas and sustainability specialists.

→ Nature Positive, the new ambition of ARAUCO

To be "nature positive" is a global objective being pushed by the Nature Positive Initiative (NPI), an alliance of conservation organizations, research centers and companies that proposes to halt and reverse the loss of nature by 2030 and achieve full recovery by 2050. The goal calls for going beyond minimizing environmental damage in order to have a positive impact that achieves real and measurable improvements.

ARAUCO set out to be a nature-positive company as part of its strategy and is already taking steps in that direction. In 2023, the Wildlife Conservation Society (WCS) conducted a comprehensive diagnosis for the conservation of biodi- versity in ARAUCO's Chilean assets. This resulted in the updating of its Biodiversity and Ecosystem Services Policy and the creation of a Climate Change Policy. In 2024 ARAUCO deployed a process of internal communication of these guidelines in Chile and the other countries where it is present.

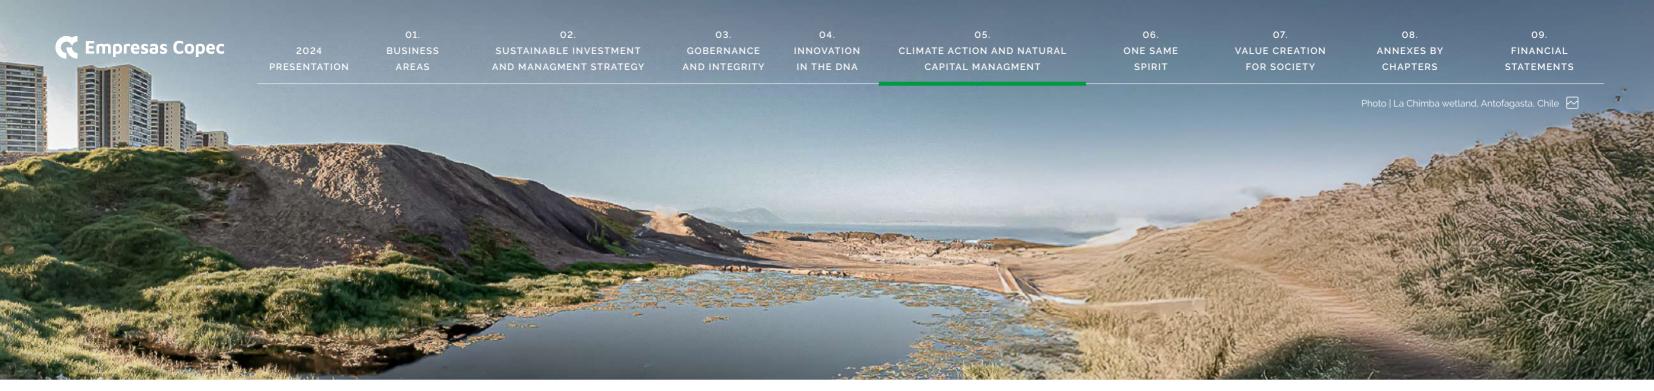

ARAUCO's potential to contribute to the recovery of nature is high, both because of the characteristics of its operations - including carbon capture, aquifer recharge, species transit, among other factors - and because of the lower contribution of emissions and waste associated with the use of its products.

Asset protection and fire prevention

The decrease in precipitation and the increase in ambient temperatures caused by climate change, together with the actions of third parties, have led to an increase in forest fires. However, the number and extent of fires affecting ARAUCO's plantations in Chile during the 2023-2024 season were lower than in previous years. This is largely due to the measures taken by the company.

The subsidiary invested US\$ 72 million last year to intensify fire prevention, detection and firefighting. This included the deployment of 883 ground brigades, 80 trucks, two bulldozers, 36 surveillance towers, ten mechanized brigades and 16 helicopter brigades. In addition, two high-end helicopters returned and several innovations were developed, such as the implementation of 122 intelligent cameras that alert parkrangers in the event of unusual activities in the monitored areas. In addition, Wood Tracking, a mobile application similar to Waze, was created to identify inner roads in rural areas, their traffic conditions and show in real time the resources deployed in the event of fires.

This set of actions is part of ARAUCO's NO+ Fires program, a comprehensive prevention and control strategy focused on urban-rural interface areas (where 42% of fires occur) through three pillars: education and dissemination, fuel management and coordinated reaction with other public and private organizations.

Energy sector

Copec works on biodiversity conservation with a focus on ecosystems near its operations and has the goal of having a positive impact on 39 of these points by 2034.

In 2018, it started a strategic alliance with the Kennedy Foundation to recover the La Chimba wetland, Antofagasta Region and, in 2020, for the recovery of El Bato, in Quintero, Valparaíso Region. Thanks to these efforts, important milestones have been reached, such as the declaration of La Chimba as a nature sanctuary and urban wetland in 2020. A report released in 2024 revealed that its surface area has increased by 48% since work began, while the El Bato wetland has grown by 17%. Meanwhile, the species observed at La Chimba increased from 47 to 164 between 2021 and 2023, and in El Bato, the species richness recorded has increased by 70, reaching 89 in 2024.

As part of the commemoration of World Wetlands Day, celebrated in February 2024, Copec received recognition from the Municipality of Coquimbo for its participation as a strategic partner of the municipal environmental governance roundtable, an instance that seeks to preserve water and biodiversity reserves, such as the El Culebrón wetland. Copec also deploys work and diagnostic plans in Vientos del Chelenko (Aysén), Ojo de Opache (Antofagasta) and Tres Puentes (Magallanes) wetlands, the Chimbarongo estuary (O'Higgins), Huasco river (Atacama) and the Quebrada de Córdoba nature sanctuary (Valparaíso), among other ecosystems.

→ Chiletur Copec boosts tourism in national parks and protected areas

Copec's subsidiary dedicated to the tourism sector won the bid for the sale of tickets for the National System of Protected Areas (SNAP) in 2024. To streamline and enhance access to national parks and reserves, a new website was implemented with an English version and the option to purchase tickets for large groups. Visits to the site increased by about 40% over the previous year.

In addition, new on-site technologies were incorporated, such as self-service totems, portable sales devices (POS) and ticket verification equipment (PDA) in parks with a high flow of visitors. By making it easier for visitors to enter, these tools also allow to relieve park rangers of administrative tasks so that they can focus on the conservation of the territories. Chiletur's initiative includes the dissemination of content about the protected areas through screens in service stations and Pronto stores.

Food sector

Nutrisco Seafood promotes responsible fishing, which implies not only compliance with regulations, but also constant innovation to achieve the best environmental standards. As a result of this policy, Nutrisco's jack mackerel is 100% renewable. It also has several international certifications, such as Marine Stewardship Council (MSC), which ensures that jack mackerel fishing is carried out under strict quality standards and the sustainability standards set by the Food and Agriculture Organization of the United Nations (FAO).

COMPANY	GOVERNANCE	GENDER EQUITY INITIATIVES	INCLUSION INITIATIVES
Copec	The subsidiary considers diversity as a value that should be promoted to encourage innovation and creativity at work. For this reason, it developed its Diversity and Inclusion Policy, which aims to provide general guidelines to be followed by all employees in their daily work and operations in order to build a diverse and inclusive culture. In addition, it provides guidelines to be followed by employees in their relations with suppliers, distributors, contractors, concessionaires and consignees.	In recent years Copec has developed several actions to ensure gender equity, such as unbiased selection, labor flexibility initiatives, salary policies and learning programs that enhance female leadership. In the last five years, the subsidiary has increased the percentage of women in its staff from 29% to 34%. In addition, it promotes female leadership, with actions such as a mentoring program that in 2024 covered 35 leading female Copec employees, who were able to participate in three mentoring sessions and two workshops accompanied by the WoomUp organization. The objective is to provide them with career development tools to improve their experience in the subsidiary. → Women in Operation Meeting In 2024, this meeting brought together 30 women working in plant operations to promote collaborative networks and facilitate dialogue on how to promote diversity at all organizational levels. For this initiative, the subsidiary was awarded with first place in the Diversity, Equity and Inclusion category at the Tank Storage Magazine awards, a British magazine specializing in fuel storage and energy transition.	Copec continues to strengthen its commitment to inclusion and equity, promoting a work environment where everyone has the same opportunities and access. During 2024, the following initiatives were promoted: • Guidance and support in obtaining disability credentials for workers and their children. • Labor inclusion program, especially focused on the experience of workers with disabilities. • Accessibility plan in plants and offices. • Diversity and inclusion training and awareness. • Accompanying the worker and training his/her work team for a better adaptation to the work environment. → No Labels by Terpel With this program, the Copec subsidiary seeks to facilitate the labor inclusion of people with disabilities through training in sign language, unconscious bias, voice equity, inclusive hiring and blind interviews, among other topics. No Labels is active in the five countries where Terpel operates: Colombia, Ecuador, Panama, Peru and the Dominican Republic.

ent experiences. It consists of a cycle of eight online sessions per year, where topics ranging from professional and technical matters to the development of interpersonal

Food sector

The merger in 2024 of the main companies in the food sector into a single company, Nutrisco, imposes the challenge of identifying the particularities of each entity, together with the objectives and values in common for all and, with them, designing a shared vision of the future, which takes sustainable nutrition as a horizon to work for. Although all the units that make up the company already had guidelines or practices in matters of people development and safety, the baseline for building the foundations and defining future goals must match with the purpose to be built among all, a process that began to be executed in 2024 and will continue in 2025. In other words, the idea is to rescue the essence of the new business so that each person feels part of a common project.

Nutrisco's diversity is a characteristic of a company that brings together different sectors: from those who make up the crew of a ship to those who work in a freezing plant, as well as by

people who work in the fields and do agricultural work. Finding the common stamp is a complex challenge, but not an impossible one. Thus, together with the definition of a purpose, the practices in the different units are being reviewed, including their benefits, to adequately address the needs and differences of the teams and ensure that each person can develop themselves and guarantee their well-being, sharing a common purpose and objectives.

In 2024, the operating model was changed in terms of people, adopting different ways of working. On the other hand, the company continued promoting people's dignity, as required by Nutrisco's Code of Ethics, which rejects discriminatory attitudes and labor or sexual harassment, as well as the pressure exerted against the affected person to prevent him/her from making the pertinent complaints.

Alxar has a Code of Ethics and Conduct that promotes non-discrimination and respect for employees and all people who interact with the company.

Las Salinas has a Code of Ethics, updated in August 2024, which represents a guide containing the guidelines and principles that should lead the work of all those who are part of the organization. This includes commitments to the safety and health of people, the development of those who are part of the company, the establishment of permanent relationships, and transparent and honest communication, among others.

Salary equity

The incomes and benefits of those who work at Empresas Copec and its subsidiaries are defined taking into account market remuneration. All salaries exceed the national minimum in the countries where the Company and its subsidiaries operate.

Empresas Copec's Diversity, Inclusion and Respect for the Person Policy⁽¹⁾ establishes that the definition of work terms and conditions (such as tasks, training, remuneration, benefits, promotion, transfer and internal discipline) must be differentiated only by characteristics of the role and the qualifications required for a specific job or position, and not by other aspects that could be considered discriminatory or arbitrary.

208% of Chile's gross minimum salary (\$ 500,000 as of July 1, 2024) reached the minimum remuneration paid by Empresas Copec in 2024, without considering bonuses and other variables. Given the diversity of industries in which the holding participates, the different companies calculate their salary gap on a case-by-case basis, disclosing their results in their respective annual reports. Additionally, each subsidiary reviews its compensation structure once a year, seeking to adapt income levels to the dynamics of the labor market in each country and considering the development opportunities of people in relation to their performance.

COMPANY GOVERNANCE SAFETY OCCUPATIONAL HEALTH GOALS AND RESULTS

ARAUCO

ARAUCO's Environmental, Quality, Safety and Occupational Health Policy establishes that the protection of the environment, product quality, and the occupational health and safety of its own and external workers are necessary conditions for the sustainable development of its activities.

The cultural change committees, made up of employees, are responsible for managing the problems specific to each location. Over time, they have progressively included more service companies, due to their relevant role in meeting safety goals.

→ Together for a better life

This corporate management model, which is implemented in all countries where the company operates, is based on three principles: empowered workers, safe teams, and a job well done. The program develops complementary practices that foster cultural changes, correct behaviors, generate learning and promote the role of team leaders in safety matters. It also contains four commitments and 16 work areas to organize daily tasks so that teams take an active role in caring for their integrity. On the other hand, the subsidiary continues to reinforce measures that have proven to be effective, such as Safe Team and ABC corporate practices (daily self-assessment of actions taken to correct unsafe behaviors or conditions), 123 (three steps that are activated when a high potential incident occurs), the 5 Key Rules and visible leadership.

Two types of surveillance are applied at all ARAUCO facilities: environmental, including the identification, evaluation and control of risks to which employees may be exposed; and medical, whose purpose is to prevent or detect a disease in the subclinical or pre-symptomatic phase, in order to take the appropriate measures to reverse or delay its progress. Workers with a certain level of risk are medically evaluated to determine whether their health is suitable for their position and are then monitored periodically. To facilitate access to medical care, there are first aid or clinic facilities at all ARAUCO locations, staffed by properly trained health personnel.

In addition, the Company carries out different initiatives focused on health care, such as programs for hearing conservation, respiratory protection, ergonomics and rehydration, where employees are routinely trained on the risks to which they are exposed and the use of personal protective equipment. ARAUCO also has general health insurance for its teams and vaccination campaigns, as defined by the health authorities.

- → Goal:
- To be a leading company in security.
- → Results:
- The accident rate was 0.47 in 2024, which represents a reduction of 9.4% compared to 2023.

COMPANY	GOVERNANCE	SECURITY	GOALS AND RESULTS
Copec	Copec's Quality, Safety, Health and Environment Policy is reflected in its Safety and Risk Management System, which covers all direct and indirect employees, based on international standards ISO 9001, ISO 14001 and ISO 45001, with certifications in force. Responsibility for this system lies with the Risk Prevention area, which monitors the facilities and implements control measures to minimize the risk of personnel exposure. A safety management platform is available for notifying dangerous work situations.	a series of action plans and initiatives to improve its results. It also trained the entire executive committee to generate the greatest possible impact in this area. Since 2024,	 → Goal: • To be a leading company in security.
Abastible	The purpose of Abastible's People Safety Management System is to protect the health and safety of its own workers, contractors and third parties. To this end, there is a Safety and Operational Integrity Policy and other guidelines that promote risk minimization through preventive actions.	→ People and Processes Security Model (OIEM) For the past five years, the subsidiary has implemented a world-class process safety management system that fosters leadership commitment, strengthens critical infrastructure, and encourages continuous improvement. It incorporates elements of risk assessment and management, safe facility design and construction, mechanical integrity, documentation, incident investigation and analysis, emergency preparedness, community relations, and change management. Abastible also applies the GO Methodology, an operational management system that establishes individual and group behaviors aligned with OIEM safety management. This model has been accredited by Dupont Sustainable Solutions (DSS+) and also extends to the subsidiaries Colgas, Duragas and Solgas.	

Nutrisco's occupational health and safety management aims to move forward in a preventive culture. To achieve this, work is carried out based on three pillars: occupational health and safety management system; technical reliability; and human and organizational factors.

With the merger, the safety policy and the monitoring of indicators were extended to all the entities that previously made up the holding company, achieving consolidated figures and the exchange of initiatives. The company is also working on the characterization of the staff and on a diagnosis with a view to implementing good practices and, eventually, certification in these matters.

Alxar's organizational culture has people at its core. In this way, the company promotes initiatives aimed at the comprehensive development of its employees and to promote self-care in each collaborator. The company's Occupational Health and Safety Policy is based on six pillars: leadership; emphasis on people; permanent alertness; management based on proactive and transparent communication; adequate infrastructure; and safety culture.

In 2024, Mina Justa in Peru showed good results in occupational health and safety, exceeding those of large mining conglomerates, placing it among the top five copper operations worldwide in this area.

COMPANY TALENT ATTRACTION SKILLS DEVELOPMENT CULTURE AND WORK ENVIRONMENT BENEFITS

ARAUCO

ARAUCO's Attraction and Selection Policy favors equal opportunity, efficiency and equity in all hiring processes. This procedure is led by a selection consultant from the Training and Organizational Development Department, who advises on the search for potential hires.

In order to promote local development, the Attraction and Selection area is concerned with considering organizations and institutions in the geographical area of the country where recruitment is required.

To meet both its growth and the challenges of technological changes in operations, the subsidiary is very active in attracting new talent, especially for the critical positions it has identified. Many are related to forestry operations and pulp mills, which are becoming more and more technologically advanced, as well as to data science and artificial intelligence. The attraction strategy focuses on promoting company: its sustainable model, its international presence and its broad projection, attributes that have made ARAUCO the most attractive company to work for in the forestry industry, according to Merco Talento.

Ongoing training of its teams is another way in which ARAUCO faces its growth challenges. To this end, it has learning initiatives with innovative and agile methodologies to adapt to different realities, which also facilitate internal mobility through the identification of career paths in critical areas.

→ Academia Forestal (Chile)

A training program aimed at enabling employees in strategic initiatives for the forestry sector in Chile, such as mechanization in internal harvesting. One of its hallmarks is the development of technological tools that facilitate learning, such as tailor-made simulators. To date, more than a thousand people have been trained.

→ ARAUCO Campus

Thanks to an alliance between ARAUCO and Duoc U, this technical-professional training center in the municipality of Arauco (Biobío Region) links theoretical education with hands-on training in the workplace. In addition to the careers taught under the dual education model, it is a training center for some of ARAUCO's training programs.

→ A single ARAUCO

The company promotes the "One ARAUCO" culture, which motivates leaders to engage with their teams and spread the company's values, processes and strategy in order to develop an organization that is aligned and committed to new challenges.

→ Work environment

In order to identify opportunities for improvement and strengths in the work environment, the subsidiary annually measures its organizational climate through the Voz Activa survey, which is conducted simultaneously in Argentina, Brazil, Chile, Mexico, the United States and the different commercial offices.

All of ARAUCO's employees receive benefits such as health, accident and life insurance, time off, food, shuttle buses to industrial plants far from urban centers, and loans. There are also scholarship programs for co-workers and their children. In Chile, the company also supports the financing of the purchase of a first home or the repair of one's own home for 5% of the workforce per year.

Energy sector

TALENT ATTRACTION

Copec

COMPANY

The company is well-known as an attractive place to work, as indicated by several employability rankings and a low turnover rate, because it has always put people at the center. In addition, it has been able to transfer to the teams the conviction that Copec is indispensable for the development and mobility of the country, which it complements with a work environment characterized by permanent innovation and a challenging distribution of responsibilities.

In order to attract and incorporate the best talent required for its transformation process, it participates in university fairs and networking activities, both on-site and online.

SKILLS DEVELOPMENT

One of the current focuses of the subsidiary's work is organizational adaptability, a necessary attribute to face the increasingly demanding requirements of the market, as well as the irruption of new technologies and competitors. For this reason, it is essential to have well-cohesive, enthusiastic teams with a sense of purpose and a willingness to change.

In this contex, Copec's Training Policy promotes a culture of learning and knowledge management that is a competitive advantage for the professional development of its employees. To this end, it offers a series of training programs organized into three pillars:

- Training in specific knowledge: mandatory courses associated with the position and role of the workers.
- Regulatory training: cross-cutting and mandatory, with the goal of complying
 with corporate policies, the company's cultural model and operational regulatory knowledge.
- Complementary training and development of employability: aims at training the employee beyond his or her role, through scholarships.

CULTURE AND WORK ENVIRONMENT

Copec's organizational culture is strongly linked to its purpose and its good brand reputation. Today, the company faces the challenge not only to continue strengthening this culture, but also to transfer it to the new generations and teams that have joined the subsidiary through the latest acquisitions.

ightarrow YOUR Copec Recognition

This program encourages peer-to-peer recognition. One of its milestones is the presentation of awards during the company's anniversary, where individuals and teams that have made high-impact contributions to the business are celebrated.

→ Copec PRO Leaders Program

Its objective is to stamp an adequate leadership seal to face current and future challenges, generating benefits in people, teams, projects and results.

→ Work environment

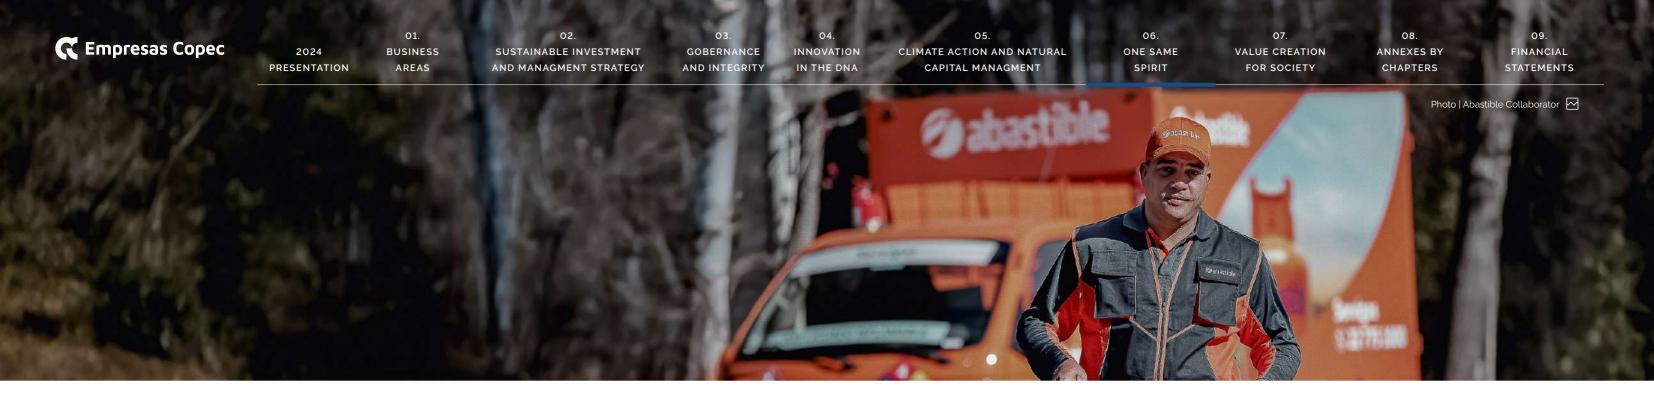

The main indicator to know the opinion of its employees is the Work Climate and Satisfaction Survey, which is applied annually to draw up action plans to strengthen key organizational aspects.

BENEFITS

Among the benefits offered by Copec are its health programs, undergraduate and graduate scholarships, holiday bonuses, academic excellence awards for children, financial guidance, extracurricular activities and earning points in different activities that are later exchanged for free time or experiences.

→ Terpel's Bienser Program

Seeks to improve the mental health and quality of life of employees and their families, promoting initiatives that enable a balance between work and personal life. Includes Teleapoyo BIP, a helpline that provides legal, financial, tax and coaching support.

COMPANY

TALENT ATTRACTION

SKILLS DEVELOPMENT

CULTURE AND WORK ENVIRONMENT

BENEFITS

Abastible

Attracting and developing talent is an essential practice within Abastible's people management. Business continuity is based on the capacity and commitment of its staff, together with the distributor network. Therefore, in order to move forward to the next level of service, it needs teams with innovative and efficient leadership.

The Talent Center of Excellence is responsible for planning and implementing professional development plans. In terms of attracting talent, Abastible continues to in the top positions in the measurements carried out in Chile and other countries where its subsidiaries have presence. This position has been strengthened thanks to the existence of a purpose that translates into tangible measures to help the development of a group of crucial players for the country's progress, such as SMEs.

The company's training offer covers different dimensions aimed at continuous improvement. To align them with the new corporate purpose, in 2023 we redefined job competencies and redesigned training plans, which continued to be offered in 2024. Some of the programs are:

- Our Orange Culture: delivers critical business knowledge and corporate values.
- Facilitators Program: strengthens the skills of learning facilitators within the company.
- Abastible Potential: increases the skills of young collaborators and those with growth potential.
- Impulso: Aimed at administrative and technical positions with development potential within the company.
- Digitalization: training in the basic use of computer tools.

Abastible's purpose, "to empower the entrepreneurial spirit", invites to act collectively under a common identity resulting from a change management process that began in 2023 and is still ongoing. In this sense, communication is the natural bridge for employees to complete the transformation that the company requires for the challenge of supporting the work of SMEs in Chile.

→ Work environment

......

Until 2023, Abastible measured its work climate once a year, with high participation and satisfaction around 90%. As of 2024, it applied a change in the measurement, to move to a methodology focused on the levels of commitment shown by employees in relation to the company.

Abastible continued to apply the "wellbeing" concept, with a comprehensive approach that promotes the physical, emotional and psychological wellbeing of its employees through the Gallup wellbeing model. In this context, its benefits program covers multiple areas:

- Healthy living: influenza vaccination, supplementary insurance, oncologic and dental agreement, etc.
- Family: marriage, death and childbirth allowances, parental leave for birth or adoption, school awards for children, etc.
- Flexibility: gradual reinstatement from postnatal leave, leave for children's health care, extension of postnatal leave for fathers, etc.
- Training: scholarships and agreements to learn languages.
- Financial welfare: loans, years of service awards, voluntary retirement compensation, discount agreements, etc.

→ Empresas Copec and its subsidiaries among the most attractive companies to work for in 2024

- For the second consecutive year, Empresas Copec ranked second in the corporate holding category of the Merco Talento Chile ranking and 45th overall, out of a total of 200 companies.
- ARAUCO reached first place in the forestry category and and climbed to 31st place in the overall ranking.
- Copec remained in first place in the energy and distribution sector, and climbed to tenth place in the overall ranking, entering the Top 10 of the most attractive companies to work for in Chile.
- Abastible ranked third in the energy and distribution sector for the second year, and 43 overall.
- Terpel, a subsidiary of Copec, was recognized with the Gallup Exceptional Workplace Award 2024 as one of the five best companies to work for in Colombia.

→ New management at Nutrisco

As part of the reorganization that Nutrisco underwent in 2024, becoming a single company with different business units, this subsidiary created two new divisions: People and Sustainability. Thus, it will be able to become an organization that, while respecting the particularities of the different businesses, aims at common standards of quality and service, with teams committed to sustainable nutrition and the objectives established for the group of entities for its customers and stakeholders.

In 2025, Nutrisco seeks to advance in the analysis of information from the units to identify gaps and define objectives in relation to issues such as equity, diversity and inclusion.

Welfare

Welfare is the essence of a prosperous and balanced society. More than a goal, it is an ongoing process that requires a sustained commitment to face the challenges of today and build a hopeful future. At Empresas Copec, we understand welfare as a collective responsibility that drives every decision and action. Promoting it implies fostering the comprehensive development of people, communities and the environment in which we live. It means being aware that only through tangible actions can we counteract current threats and forecast prosperity for future generations. This commitment drives us to generate a positive impact that transcends, seeking that each action contributes to social welfare today and tomorrow.

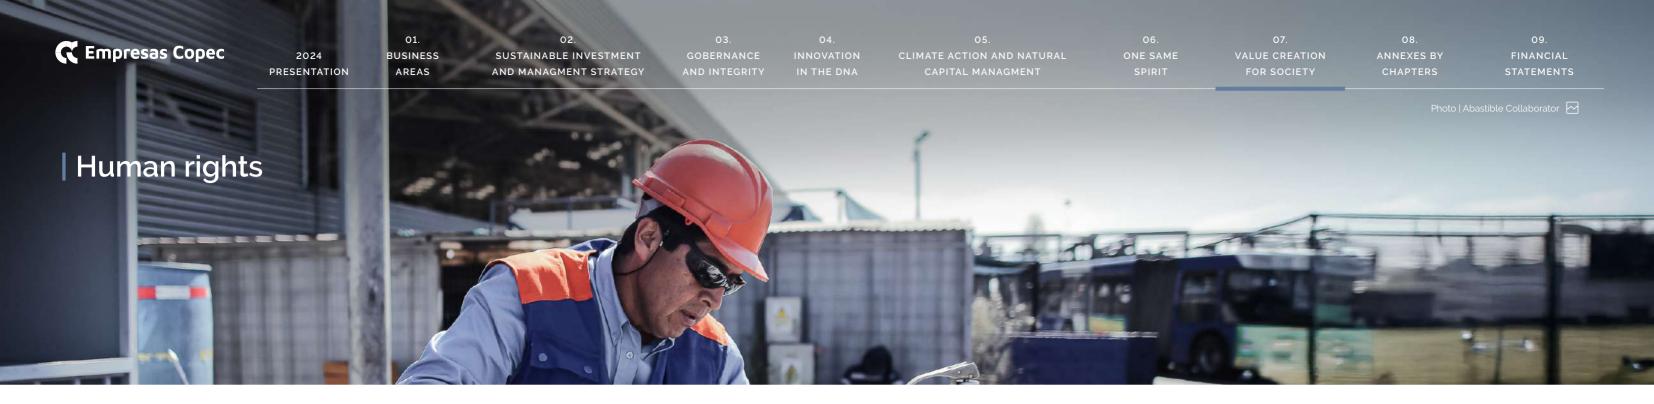

Building the future is a task that requires the participation of everyone. For this reason, through its lines of business, Empresas Copec and its subsidiaries aim to strengthen the capabilities of society and, in particular, of the groups with which it interacts, so that everyone can collaborate and benefit from this joint construction. Thus, they seek to organize initiatives that contribute social value beyond their industrial and economic activities.

Citizen Brands

The 15th version of the Cadem Citizen Brands study, for the second half of 2024, highlighted the subsidiary Copec as the second best evaluated brand out of a total of 310 companies that took part in the survey, an increase of 13 places compared to the previous version. Copec also topped the service station category. Pronto led the convenience store sector, climbing from 91st to 37th place.

Other subsidiaries of the group that are part of the list are Abastible (59), Blue Express (115) and ARAUCO (167).

According to Cadem's definition, citizen brands are those that have a relevant impact on society and on people's quality of life. They are brands with a purpose and that have placed the relationship with the community at the heart of their business.

Empresas Copec maintains an explicit commitment to respect human rights, framed in compliance with the United Nations' Guiding Principles on Business and Human Rights. They also recognize the ten principles of the Global Compact⁽¹⁾, of which the Company has been a member since 2021.

In the development of its business, Empresas Copec applies its Human Rights Policy⁽²⁾, taking care to respect all its stakeholders. In addition, together with its subsidiaries, it complies with the labor laws and regulations of each country and region, and strives to guarantee stable employment and fair wages for its employees.

Third Diagnosis of **Human Rights and Business**

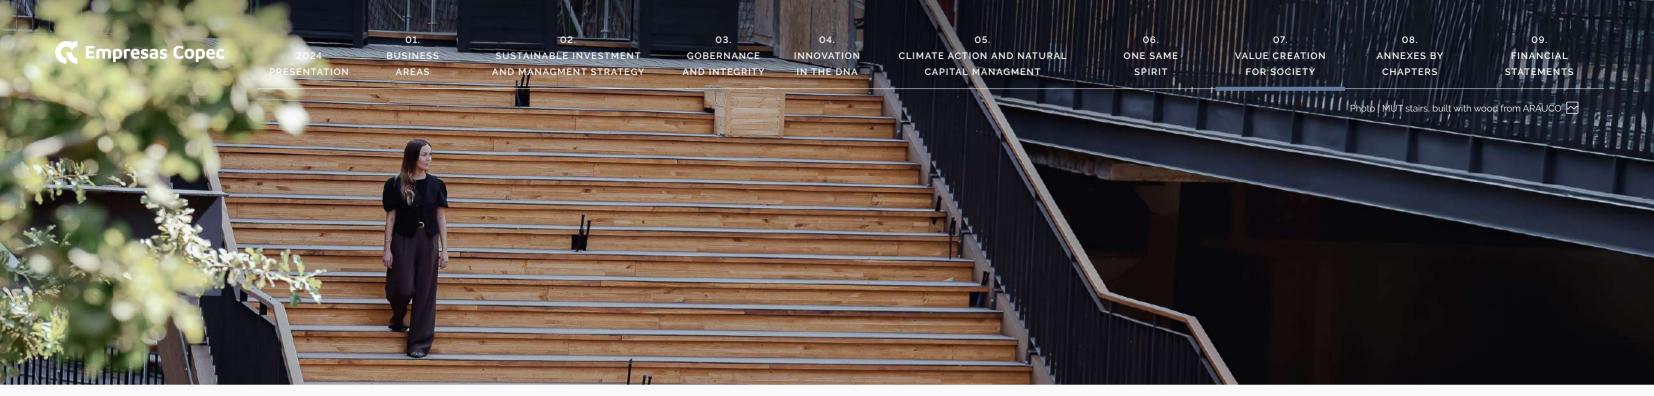

This instance, led by Pontificia Universidad Católica de Chile's Corporate Sustainability Program, evaluates the Chilean private sector using the methodology of the Corporate Human Rights Benchmark (CHRB), of the World Benchmarking Alliance (WBA), in its "Core UNGP" version. This is composed of 12 indicators that evaluate the fundamental components of the United Nations Guiding Principles on Business and Human Rights Council in- risk identification and management systems (due diligence) cluding commitments, due diligence in the and access to repair.

In this version, Empresas Copec obtained 13.5 points out of a maximum of 24, which is equivalent to a level of compliance of 56% regarding the indicators evaluated and an increase of six points compared to the previous diagnosis. This result places the Company above the general average of both IPSA companies and those belonging to the holding sector. Its most significant year-on-year improvement was in the human rights pillar of the assessment.

2024 INTEGRATED REPORT 2. . Available at C-> Human Rights Policy

^{1.} Initiative created by the United Nations to promote the incorporation of sustainability in the work of companies, through the commitment to implement specific plans and programs around the principles of human rights, labor relations, environment and anti-corruption methods in line with the 2030 Agenda and its 17 Sustainable Development Goals (SDGs).

Whistleblower channel

NCG 461 (8.1.1 / 8.1.2) 🕙

Empresas Copec has a communication channel, managed by an independent, confidential and anonymous third party $^{(3)}$ so that any person who has information about violations of Law N° 20,393 and its amending laws can report them directly to the Company's Offense Prevention Officer (OPO). Through this means, it is also possible to report conduct that deviates from the Code of Ethics, corporate values, the Human Rights Policy or the Diversity, Inclusion and Respect for People Policy, labor legislation and any other regulations in force.

The complaints may refer both to employees of Empresas Copec and to entities that maintain relations with it.

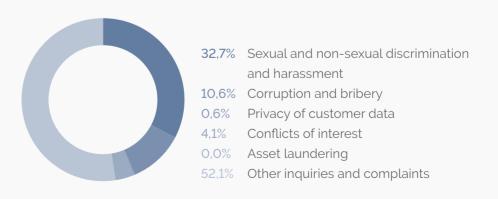

Once a complaint is received, the OPO must evaluate its merit and initiate an investigation as soon as possible, gathering all available background information. It then brings the situation to the attention of the Ethics and Compliance Committee, to agree on the next steps, in accordance with the Whistleblower and Consultation Channel Procedure⁽⁴⁾.

In addition, each subsidiary has its own channels to ensure fluid communication with the various stakeholders.

517Inquiries and complaints investigated and resolved

Nutrisco. In 2024, the subsidiary continued to collaborate in the search for solutions for odor management, air quality improvement, environmental education, landscape protection and biodiversity, among others.

In Coquimbo, Orizon Seafood is part of the Environmental Governance Board, led by the local municipality, which promotes collaboration between public and private institutions. environmental governance by the Ministry of the Environment.

Empresas Copec and its subsidiaries have policies and procedures aimed at granting fair and timely payment to its suppliers, in addition to guaranteeing that the criteria of usefulness, quality, timeliness and budget are favored in the selection processes.

To choose and contract suppliers, Empresas Copec uses technical, professional, economic and ethical criteria that are in line with the Company's needs. The selection procedures are objective and transparent, established prior to the process and demonstrable before higher authorities. Empresas Copec's supplier payment policy considers disbursements every 15 days once the invoice is approved, making no distinction between critical, national, international or SME suppliers.

The Company did not register agreements in the Register of Agreements with Exceptional Payment Periods kept by the Ministry of Economy.

Empresas Copec defines a supplier as critical according to parameters such as the value of purchases, its alternatives, handling of strategic or confidential information, regulatory and legal requirements, operational contingency and effects on the process, support for corporate strategy and reputational and economic impacts. Likewise, the specific risks inherent to the geographical location of the companies are taken into account, i.e. the most relevant local issues in each country and region. The particularities of each productive sector are also considered.

ARAUCO evaluates its suppliers to establish whether there are associated sustainability risks, which it categorizes as high, medium or low. Based on this evaluation, monthly actions are generated for each one. Procurement practices are continually reviewed to ensure alignment with supplier integrity expectations and to avoid potential conflicts with ESG requirements.

Copec has a supplier evaluation policy that considers sustainability, innovation and industrial safety parameters, among others. The results of these evaluations are used to generate action or corrective plans for those with opportunities for improvement.

RELEVANT FIGURES • 15 days was the average payment period to domestic suppliers of Empresas Copec S.A. in 2024, four days less than in 2023.

- 5.4% of the total number of suppliers defined as critical in 2024, unchanged from the previous year.
- 67.4% of total procurement payments to critical suppliers in 2024, 0.4 percentage points more than in 2023.

Empresas Copec S.A. Supplier Code of Conduct(10)

In order to build a sustainable supply chain, Empresas Copec created the Supplier Code of Conduct, which establishes the business practices and minimum sustainability requirements to follow the obligations contained in the code, which are as that all its suppliers must comply with in order to maintain a follows:

balance between economic growth, environmental care and social welfare. All purchase orders have clauses requiring them

SUPPLIER CODE OF CONDUCT	
Labor and human rights	 Compliance with proclaimed human rights. Freedom of association. Prohibition of discrimination. Prohibition of forced labor. Safe work environment based on respect, honesty and teamwork, seeking to continuously and progressively reduce the risks of operations. Respect and promotion of diversity and inclusion.
Health and safety	• Delivery of working conditions that allow for healthy, safe and comfortable working environments, in order to prevent illnesses, accidents and injuries.
Sustainability	 Business management with responsibility and integrity in environmental, social and governance issues. Compliance with applicable environmental regulations.
Ethical management	 Independent, fair and transparent relationship. Rejection of any activity related to the offenses contemplated in the Law N° 20,393 and all those that may be incorporated to such law in the future. Compliance with free competition. Prohibition of any situation that could constitute a potential conflict of interest.

Supplier evaluation

Empresas Copec and its subsidiaries evaluate their suppliers to align them with the interests and standards defined by each of them, while strengthening the management of those qualified as critical. The evaluations are carried out through the systematic verification of evidence and documents and, on occasions, in the field, with personnel hired for this purpose. These include:

- → A diagnosis of its status
- → Identification of opportunities for improvement
- → Proposal of action plans
- → Follow-up of operations
- → Recognition of achievements
- → Legal compliance

78.448

total suppliers in 2024

2024 FIGURES

- 95.8% of domestic suppliers on a consolidated basis,
- US\$ 26.402 billion paid to suppliers at consolidated level, 8.9% less than in 2023.
- 67.4% of the total amount spent with suppliers was with critical/significant suppliers.
- 5.4% critical suppliers at on a consolidated basis(11), unchanged from last year.

2.4 percentage points more than in 2023.

- 7.3% of suppliers on a consolidated basis received some type of evaluation, 4.5 percentage points more than in 2023.

MAIN GENERAL ASPECTS EVALUATED

Topics are tailored to each business and type of supplier.

- These could include: Ethical behavior
- Human rights
- Employment Conditions
- Environmental care
- Relationship with communities

IDENTIFICATION OF SPECIFIC RISKS

Political exposure

- Crimes related to Law N° 20,393 and its amending laws
- Adverse news and other legal issues

This evaluation is carried out permanently through software that monitors the universe of Empresas Copec's suppliers.

MANAGEMENT MODEL

A supplier is considered to have a high sustainability risk when it does not adequately and timely address actions related to the sustainable management model, generating situations that could negatively affect the business in the economic, social or environmental sphere.

→ ARAUCO and Copec stand out among the leading companies in timely payments

Both subsidiaries were recognized by the Commodities Exchange and the Chilean Association of Entrepreneurs (ASECH) with the award for Best Paying Companies of 2024. This award recognizes public and private organizations that not only respect legal requirements, but also meet their payment commitments in significantly shorter terms, a key factor for the sustainability of the entrepreneurial sector. In its second edition, this award, given in alliance with El Mercurio, analyzed 12,500 companies in the country, using as a basis the official information of invoices entered into the custody of the stock exchange between July 2023 and June 2024.

2024 INTEGRATED REPORT 11. Empresas Copec has no significant indirect suppliers (non Tier-1).

☆ Forestry sector

COMPANY	GOVERNANCE	EVALUATION	PAYMENTS	INITIATIVES TO EMPOWER SUPPLIERS
ARAUCO	ARAUCO's payment expectations consider compliance with the deadlines stipulated by the legislation of each country where it operates. The company also defines critical suppliers as all those that are classified as strategic and, therefore, have an impact on the operations of the industrial plants. On its website there is a special section for suppliers in Chile ⁽¹²⁾ , where information is provided regarding the subsidiary's integrity expectations. This platform also seeks to make suppliers aware of and align themselves with the policy and procedures that concern them. Suppliers with permanent contracts must also comply with clauses referring to compliance standards and other relevant regulations.	Suppliers are evaluated according to their level. Critical suppliers are financially reviewed once a year. Meanwhile, all assets associated with the service contract areas undergo a monthly risk assessment, where mainly their debt level is reviewed. These processes allow us to define whether they have sustainability risk, which can be high, medium or low. Actions are monthly generated for each supplier according to the classification obtained.		→ Play Local ARAUCO seeks to be an active agent in the economic and social development of the places where it is present. In this line, the Juega Local (Play Local) program aims to strengthen the economies in each area through the purchase of goods and the contracting of services generated in those areas. In 2024, US\$ 4.478 billion were allocated to local purchases. All these suppliers are required to meet the same environmental and safety standards as the rest, which is also an incentive to raise the level of supply in each territory. When required, the company helps them to meet the requirements in these areas.

COMPANY	GOVERNANCE	EVALUATION	PAYMENTS	INITIATIVES TO EMPOWER SUPPLIERS
Copec	The subsidiary set out to develop ties with its suppliers to ensure operational continuity while encouraging them to adhere to the company's ethical, health and safety standards. Its Supplier Policy includes the annex "Sustainability Commitment", which is part of all supply contracts. The company defines its critical suppliers in accordance with the purchasing volumes and their substitutability or relevance to the business. There is a Supplier Portal ⁽¹³⁾ , where suppliers can find applicable corporate policies and news of interest to them.	Copec has a Supplier Evaluation Policy that considers the trajectory of the companies, their management in sustainability and innovation, and technical, logistical, service, industrial safety and quality management criteria. It also includes variables such as price, compliance with deadlines, technical and financial evaluation.	The subsidiary pays its SME suppliers within a maximum of 15 days from receipt of the invoice, as part of its commitment to this segment. For exceptional cases, such as fee-based suppliers or those exclusive to the company, a maximum of seven days has been established.	→ SME Commitment Copec created a space for operational and financial development for 15 smaller companies that provide services or supplies, such as plant maintenance, logistics, tankers and ranches. Launched in 2022 together with Chile Converge, in its first year Copec mentors accompanied these companies and advised them to increase their sales and enable their growth as suppliers of excellence. From the second year onwards, improvements began to be implemented in each of them and new SMEs were added.
Abastible	suppliers are an essential part of Abastible's value chain, especially SMEs, since hey represent 74% of domestic suppliers. For this reason, the subsidiary is committed to encouraging their development, true to its purpose of promoting the entrepreneurial spirit. Its processes in this area include criteria and procedures that favor and encourage the hiring of SMEs (Pyme Primero). It ensure the development of contractors, more than 70 installers were evaluated and certified, ensuring knowledge and expertise in their work. In addition, abastible took out an OCIP (Owner Controlled Insurance Program) insurance policy to cover the risks inherent to its activities. In addition, there is a dispute resolution system structured in two stages. The area internal and is carried out within the company through a commission made up of representatives of the different areas involved in the relationship with SME suppliers. If a solution is not reached at this stage, the conflict is taken to the second stage, in which an external and independent body mediates to chieve the resolution of the case.	porates environmental criteria and compliance levels; a social evaluation, which establishes adherence to safety standards and the protection of workers' rights; and other relevant aspects related to employee care, in order to promote responsible behavior throughout the supply chain. In addition, the subsidiary has a process to manage the risks of its critical supply chain: the requirements program is subject to strict monitoring that allows the necessary adjustments to be made to the commercial projection, the supplier delivery plan and the stock in warehouses. This makes it possible to anticipate possible stock-outs and develop action plans.	pending on the type of supplier. To strengthen the relationship with SMEs, since 2023 it has implemented the 7-Day Payment program. In 2024, more than 94% of invoices issued by SMEs were paid in an average of 5.2 days, benefiting 2,266 companies. During the year, improvements to the program were studied to enable a payment term of seven days from the delivery of the good or completion of the service and not from the issuance of the invoice. This new term will be implemented gradually during the year 2025.	To promote the 7-Day Payment program and encourage its adoption by more companies, in 2024 Abastible signed collaboration agreements with Conupia, the Chilean Confederation of Small Industry and Craftsmen; ASECH, the Chilean Association of Entrepreneurs; and Conapyme, the Chilean Confederation of Micro, Small and Medium-Sized Enterprises. The purpose of the agreements is to share with these trade organizations the experience acquired in implementing the initiative. In addition, in partnership with the Construyendo Mis Sueños corporation, the MSME Center is being created to provide support and advice to suppliers in this category, so that they can improve their competitiveness, productivity and quality of life.

2024 INTEGRATED REPORT

COMPANY	GOVERNANCE	EVALUATION	PAYMENTS	INITIATIVES TO EMPOWER SUPPLIERS
Nutrisco	The company has a communication channel with contractors and service providers to channel their concerns, queries, complaints and suggestions in an efficient and timely manner. Nutrisco defines critical suppliers as those that provide a good or service that are vital for operational continuity, safety or health of its contractors and workers.	goods and services that considers criteria such as deadlines, number of claims, nonconformities and compliance with re- quirements associated with the company's quality and food	The company has a policy of timely payment to suppliers of 30 days from the date of invoice, with special priority for SMEs, for which it considers shorter terms. Payments are also made in shorter periods according to corporate needs and priorities, in order to maintain and strengthen commercial alliances with suppliers.	·

Contractors

At the individual level, Empresas Copec does not work with contractors.

However, this is a relevant stakeholder for its subsidiaries.

In Chile, ARAUCO, Copec, Abastible and Nutrisco carry out monthly monitoring of contractors' compliance with their labor obligations, paying special attention to their internal standards, such as protocols, norms and certifications. They are also invited to participate in training and awareness-raising events on health, safety, environmental management and regulatory compliance.

5.278 contractors in subsidiaries at the end of 2024

69.710 subcontracted workers (76% men and 24% women)

Empresas Copec is c ommitted to education in Chile

Belen Educa Foundation

Empresas Copec and its subsidiaries contribute financial resources and participate in the projects promoted by this institution, which manages 12 educational institutions in vulnerable sectors of Santiago and La Unión (Los Ríos Region), reaching more than 15 thousand students.

In 2024, among other activities, ten executives of the Group gave professional lectures at the Archbishop Manuel Vicuña school in San Joaquín, La Legua, where they motivated students from seventh grade to fourth grade. In addition to this, there is the Tutoring Program, an instance developed to guide fourth-grade students in their professional development, and where executives of the Company and its subsidiaries meet monthly with students to guide and accompany them in their educational careers.

The Anacleto Angelini Fabbri academic excellence scholarships were also awarded to eight students who graduated from the foundation's schools. This benefit provides resources for annual maintenance and support for higher education studies. Since 2006, more than 130 young people have received the scholarship.

Enseña Chile Foundation

The Company and its subsidiaries have been partners of Enseña Chile Foundation for 15 years. This Chilean institution is responsible for selecting and training young professionals who wish to dedicate their first working years to teaching in vulnerable schools, in order to build a network of agents of change capable of impacting the educational system.

As part of this alliance, a group of Company employees is participating in the Volunteers Project, an initiative that seeks to reduce the academic gap of students in schools with a high vulnerability index.

Education

☆ FORESTRY SECTOR

→ ARAUCO Educational Foundation

This institution, which celebrated its 35th anniversary in 2024, focuses on improving learning processes in public education through professional development and educational improvement programs for teachers, community leaders, management teams, funders and local authorities. Throughout its history, it has positively impacted 500 educational establishments in 34 municipalities and more than 120,000 students.

In 2024, the Foundation joined the Sumar Saberes alliance, promoted by the Ministry of Education and Fundación Chile, which aims to identify and promote successful initiatives that can be scaled up in the country.

It also made available to all educational establishments in Chile the Dominio Lector resources, free tools to evaluate the oral reading fluency and speed of students from first to eighth grade.

→ Schools of excellence

Since 1981, ARAUCO has founded three schools: Arauco, Constitución and Cholguán, where more than 1,200 students are educated each year. The academic achievements of these schools are recognized nationally. In 2024, the Constitución and Arauco schools stood out for the performance of their graduates in the Higher Education Access Test (PAES).

\rightarrow ARAUCO Campus

Through an alliance between the company and DUOC UC, an institute was created eight years ago in the municipality of Arauco, whose objective is to strengthen technical-professional education in line with the productive vocation of the region.

\rightarrow Renewal of mobile library vehicles

To promote reading, in 2024 ARAUCO renewed the fleet of the Bibliomóviles program, which operates in the municipalities of Cañete, Lebu and Los Álamos in the Biobío Region. Its objective is to provide book lending services to schools and rural communities where there are no public libraries. In addition, 900 books were added to the mobile library catalog.

♣ ENERGY SECTOR

ightarrow Copec's Viva Leer Program

This initiative has been encouraging reading for 13 years through the construction of libraries open to the community in municipal and semi-private schools. Each year, through a contest, Copec selects 15 schools to benefit them not only with new libraries, but also with a collection of more than 2,000 books and software to manage loans. In 2024, it added an exclusive competition to implement reading spaces in smaller rural schools. To date, around 140 libraries and 25 reading spaces have been installed throughout the country.

In addition, the program considers the sale of a collection of quality, low-priced books at service stations and on the website.

\rightarrow Terpel Foundation

This 20-year-old institution works to improve the quality of education in Colombia and Panama by developing basic competencies in leadership, mathematics and language in vulnerable children and young people. In 2024 it signed a memorandum of understanding with the Colombian Ministry of Education, which seeks to assist in the implementation of innovative pedagogical strategies.

Quality of life

☆ FORESTRY SECTOR

\rightarrow Water Challenge (Chile)

For more than a decade, this ARAUCO program has been supporting 51,000 people through 116 rural drinking water projects (APR) in 42 municipalities. This has been possible thanks to the delivery of studies, engineering and land for the development of the works, through a public-private partnership model. The project includes, on the one hand, the implementation of methods to measure water parameters in forest watersheds and, on the other, the Monitors initiative, which trains neighbors in water and soil resource management. More than 380 projects in 22 municipalities have received this training.

In 2024, the Sustainability Ranking prepared by Brinca and Universidad Adolfo Ibáñez Business School selected ARAUCO as one of the winning institutions in the environmental category for Water Challenge.

→ Habitability and Territory Program

Promotes high quality housing solutions for the company's workers, contractors and neighboring communities, together with public and private organizations.

\rightarrow Open Forest

ARAUCO gives communities access to its forestry assets so that they can enjoy the environmental, social and cultural values that forests offer.

→ Food Network (Chile)

Since 2010, this network has been working to rescue food and staple products fit for human consumption, which it then distributes to the needlest people, thereby also helping to prevent waste.

As part of their social commitment, ARAUCO, Abastible, Arcoprime and Nutrisco support this cause with resources or products that would otherwise be discarded. In this way, they contribute to a sustainable model that benefits both the community and the environment.

4 ENERGY SECTOR

\rightarrow Accelerate your ideas

In 2024 Copec launched its first competitive fund for community and territorial organizations, specifically those that develop activities that benefit the communities of Mejillones, Caldera, Coquimbo, Quintero and Calbuco. The fund finances projects of social, productive, cultural, sports, environmental and community safety impact that respond to the needs identified by the neighbors themselves. A total of 75 million pesos were allocated. The selection process was carried out through a technical evaluation based on criteria such as relevance, internal coherence, coverage and sustainability.

→ Emergency Support

In 2024, Copec and Arcoprime were present during the fire emergency in the Valparaíso Region, by donating \$70 million to Red de Alimentos. This institution made it possible to deliver basic necessities to the inhabitants of the affected areas. In addition, they generated a help channel for customers and workers who wanted to make a direct economic contribution.

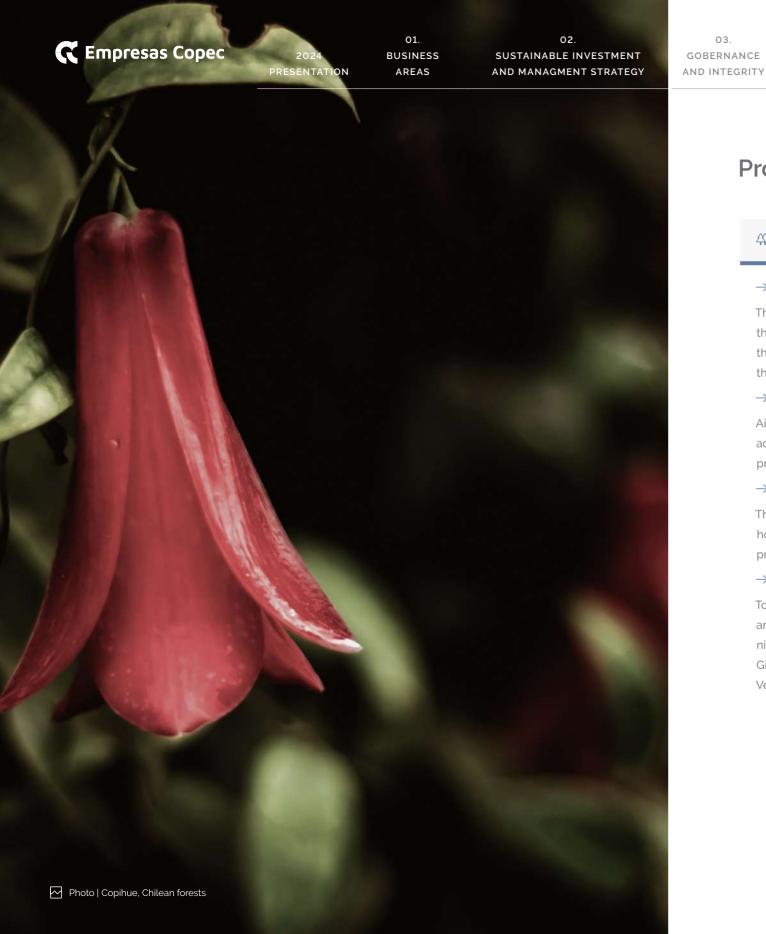

Copec also signed an agreement with the Chilean National Firemen's Board for efficient fuel delivery in emergencies.

Abastible also provided assistance to people affected by the fires in the Valparaíso Region, through the replacement of damaged cylinders, gas refueling and support to municipalities, groups and community kitchens. Donations totaled more than \$ 250 million.

→ Agreement to benefit Chile's neighbors and households

During 2024, Abastible signed agreements with the Chilean Association of Municipalities and the municipalities of Santiago, Valparaíso and Viña del Mar to benefit the residents of these 99 municipalities with discounts of up to \$6,000 on purchases of 5 kg, 11 kg and 15 kg liquified gas loads. Residents can use up to two discounts per month.

☆ FORESTRY SECTOR

04.

INNOVATION

IN THE DNA

→ Play Local

03.

This program seeks to connect the supply of local goods and services with the requirements of ARAUCO's industrial and forestry operations through the support and training of SMEs and entrepreneurs in the regions where the company has operations.

→ Despensa Silvestre (Chile)

Aims to enhance the value of forest trades, providing formal and secure access to ARAUCO's forestry assets to beekeepers and collectors of forest products, as part of the Mapuche Program.

→ Sustainable Beekeeping Program (Argentina)

The company opens its land for neighbors to install beehives and produce honey. Thus, on company land, approximately 1,000 liters of honey are produced for sale per year.

→ Science and technology for new generations

To promote the development of STEM (Science, Technology, Engineering and Mathematics) skills in the region's future generations, ARAUCO organized a day of knowledge exchange between mentors from the Inspiring Girls Foundation and seventh and eighth grade students from the Edelmira Vergara Quiñones school in Arauco.

♦ ENERGY SECTOR

→ Chiletur

Copec presented in 2024 the evolution of its traditional travel guide, Chiletur Copec, now transformed into an international standard platform for booking, planning and enjoying more than 500 tourist experiences throughout the country, from Arica to Puerto Williams, including Easter Island and the Juan Fernández archipelago. Chiletur also empowers tour operators, micro-entrepreneurs and local communities, enabling them to digitalize their offerings, certify their services and increase their reach. In this regard, Chiletur's development required extensive collaborative work with more than 300 national tourism operators, who were trained in digital content and in obtaining certification from the National Tourism Service. Chiletur now has more than one million active users, between the app and the web. By 2025 Copec plans to expand the platform to more than 1,000 operators.

→ Move Your Dreams

With this program, Copec supports the growth of entrepreneurs, micro-enterprises and SMEs in the municipalities of Caldera, Coquimbo, Quintero and Calbuco, and five towns in Patagonia: Coyhaigue, Puerto Aysén, Puerto Río Tranquilo, Puerto Chacabuco and Río Ibáñez, giving them the opportunity to learn and train in areas such as formalization, marketing, sales and finance. It is carried out with the support of UC's Anacleto Angelini Innovation Center, and offers mentoring through a hybrid learning model, with the delivery of financing to the finalists. The third version was launched in 2024. 569 SMEs have been trained.

→ Mundo Verde MiPyme Program

Through its participation in this Banco Estado program, Copec Voltex supports SMEs in their energy transformation with consultancy and access to electromobility projects. The objective is to help small companies to materialize their transition projects.

4 ENERGY SECTOR

FOOD SECTOR

\rightarrow Support for the MSME platform

Together with Multigremial Nacional and Kame ERP, Abastible delivered a free accounting system to all micro and small companies in the country.

→ Abastible's agreement with the National Chamber of Commerce

This collaboration, signed in 2024, allows us to provide legal advice to our collaborating SMEs, in addition to facilitating their application to labor formalization programs.

→ Somos Almacenes

In 2024 Abastible signed an alliance to join the Somos Almacenes (We are grocery stores) program of the Ministry of Economy, which aims to promote the growth of these SMEs. Specifically, the subsidiary will collaborate with the Barrios platform, which gives visibility to local businesses, and will provide special discounts to grocers on the purchase of liquified gas.

→ Agreement for the benefit of bakeries

During the year, an agreement was also signed with the Chilean Federation of Industrial Bakers (Fechipan), so that the nearly 20,000 associated stores (85% of them SMEs) can access discounts on the purchase of liquified gas cylinders.

→ Alliance with craft breweries of the Araucanía region

Under an alliance with the Association of Breweries of Costa Araucanía signed in 2024, Abastible offers affiliated SMEs a better price on the purchase of liquified gas, a fuel that is widely used in the cooking of beer.

→ Large SME Corporation

Together with other well-known local companies, Abastible worked during 2024 on the creation of a non-profit organization to finance, in a first stage, studies that will provide useful data and indicators for the design of policies and initiatives to help this key sector of the economy. The project envisages the creation of an observatory to develop studies and innovative solutions in areas such as financing, formalization, and growth.

→ Food Innovation Award

Together with Transforma Alimentos and Espacio Food & Service, Nutrisco awards this annual recognition to innovations in the food industry that stand out for their business potential, social impact and creativity. The winning projects receive financial support and mentoring for scaling up. The last award ceremony took place at the international food industry exhibition Espacio Food & Service, where Nutrisco also organized the seminars "Trends and consumer behavior" and "Sustainable innovation".

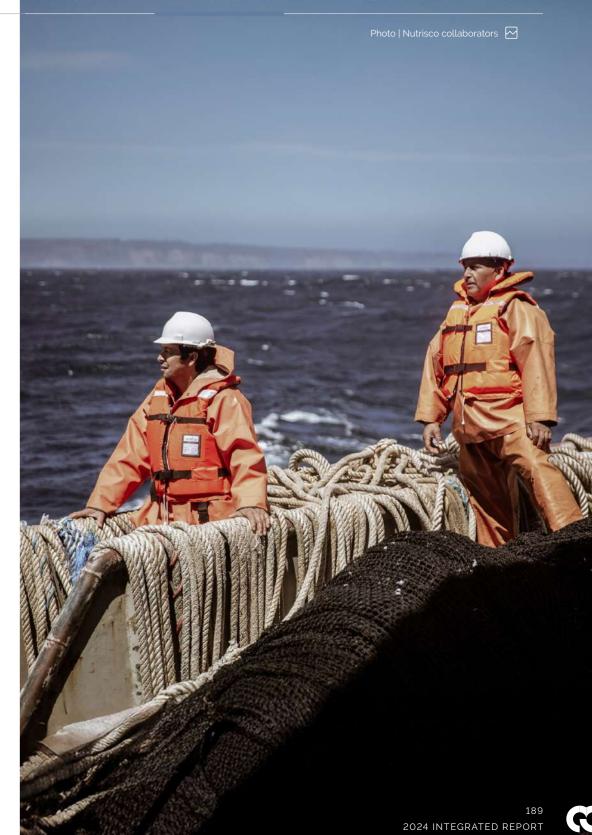

→ Community plant for entrepreneurs in Coronel

In 2024 Nutrisco provided a ClinBox room on loan to a group of women from the Sindicato de Charqueadoras de Lo Rojas. It is fully equipped and has a sanitary resolution for processing smoked jack mackerel and crab meat.

Orizon, together with CeTA, the Technology Center for Food Innovation, inaugurated a new facility in the Biobio Region, within the company's plant, to improve the development of products based on local raw materials. The center has more than 230 m2 equipped with advanced machinery, laboratories, product development areas and production lines. This is the second CeTA facility developed by both entities. The first one is located in the Coquimbo Region and has been operating since 2020..

→ Alliance with the Chilean Association of Gastronomy (Achiga)

The strategic partnership signed by Nutrisco and the gastronomic sector aims to materialize the commitment to promote healthier eating. Achiga brings together more than 4,000 points of sale throughout the country, including restaurants and suppliers.

Relations with Indigenous Peoples

For ARAUCO, its relationship with the indigenous peoples of the territories where it operates is an opportunity to promote reciprocal knowledge, channels of participation and permanent dialogue. The goal is to build long-term, trusting relationships that open paths for mutual development.

Since 2012, ARAUCO has had a Mapuche Community Relations $Policy^{(16)}$, which lays the foundations for its relationship with the Mapuche people based on five pillars:

ightarrow 1. Promoting knowledge and learning about ARAUCO

There are more than 160 people trained in the Intercultural Training.

→2. Maintain permanent dialogue and consultation processes

There are 426 Mapuche communities linked to ARAUCO. Since 2013, more than 280 consultations have been held and a mechanism has been created to encourage local Mapuche employment with more than 640 employees and contractors.

→ 3.Identify sites of religious, cultural and economic interest

There are 42 areas of high cultural conservation value, which the company co-manages with the communities. In Lanco, together with the indigenous community of Hueima, the Hueima waterfall infrastructure is being assessed and habilitated, while

with the community of Lilcoco we are working on identifying and enabling a cultural trail.

In Loncoche, together with the Neicuan Curin community, a process began in 2024 to habilitate the community's ceremonial site (nguillatüwe), a process that will finish in 2025.

\rightarrow 4. Know and manage land requirements

More than 5 thousand hectares have been transferred to communities through the National Corporation for Indigenous Development (Conadi) since 2014.

 \rightarrow 5. Seek dialogue practices and mechanisms for consultation, resolution and administration of disputes

Transparency

Transparency is an essential pillar for building relationships of trust and legitimacy. In an increasingly interconnected world, being transparent means opening effective, clear and honest communication channels. At Empresas Copec we believe that transparency is the basis for ethical and responsible management, where actions speak as loudly as words. To this end, we promote dialogue and the delivery of truthful information in a timely and efficient manner. It is an act of respect for people and an unwavering commitment to the common good.

In accordance with Circular N° 1,956 of the Financial Market Commission, the Board of Directors nominated at its ordinary meeting of April 25, 2024 the persons who would be members of the Directors' Committee referred to in Article 50 bis of Law N° 18,046. The persons appointed on that occasion were Ms. Marcela Achurra González, Ms. Karin Jürgensen Elbo and Mr. Juan Edgardo Goldenberg Peñafiel. It is worth mentioning that the former is an independent director, was appointed chairwoman of the Committee and is responsible for communicating the matters discussed to the Board of Directors of Empresas Copec S.A. During the 2024 fiscal year, the Committee was dedicated to fulfilling its duties and exercising the powers established by law, which, among other matters, meant examining the reports

submitted by the external auditors and the financial statements

submitted by the management, and make recommendations regarding them; propose to the Board of Directors external audit firms and risk raters; examine the remuneration systems and compensation plans for managers, chief executives and collaborators; and finally, it examines the background information related to the transactions referred to in Title XVI of Law N° 18,046 on Corporations, issuing the corresponding reports. In this last point, it should be noted that the Committee analyzed the transactions referred to in this Title, verifying that the operations carried out are in accordance with market conditions and the social interest. Likewise, the Committee proposed to the Board of Directors a Customary Transactions Policy in accordance with Article 147 letter b) of Law N° 18,046 and the General Rule N° 501 of the Financial Market Commission, which was approved and

disclosed as material fact. In addition, the Company's Board of Directors specifically instructed the Directors' Committee to review, in support of its work and on a non-resolutionary basis, the following matters: Internal Audit, Financial Investments and Risk Management.

The Committee met nine times, with the attendance of the Chief Executive Officer, the secretary of the Committee and the Chief Finance Officer or, in the absence of the latter, the general accountant or finance and investor relations director; and, when appropriate, with PwC external auditors, KPMG internal auditors and Deloitte executives in charge of risk management. The main subjects reviewed in each session are listed below:

SESSION	DATE	REVISED SUBJECT	DETAIL
1) Session N° 159	January 24, 2024	→ Compensation system for managers, senior executives and collaborators	• The main aspects of the remuneration and compensation system for the Company's managers, senior executives and employees are presented.
		→ New CMF's NCG N° 501	• The secretary of the Committee spoke about the new General Rule N° 501 of the Financial Market Commission (CMF) on the policy of habituality and the new obligation to report on a semiannual basis on the transactions with related parties.
		→ Fees to auditing firms	• A detail of the fees paid by the Company in 2023 to the audit firms that provided consulting services in the areas of internal audit, external audit, tax consulting, financial consulting, risk management and other activities was presented.
		→ Related operation	• It was agreed to recommend to the Board of Directors the approval of the fees proposed by Portaluppi, Guzmán y Bezanilla Asesorías Limitada for legal services.
		→ 2024 Committee meeting schedule	• The schedule of meetings of the Committee was agreed upon, and the subjects to be discussed at each meeting were determined.
2) Session N° 160	February 28, 2024	→ 2023 Financial Statements and External Auditors' Report	• It was agreed to submit for the approval of the Board of Directors the Financial Statements corresponding to fiscal year 2023 and the respective External Auditors' Report.
		→ Contracts with Related Companies, Quarterly Report	• The background information of transactions with related parties was examined, which, according to information provided by management and the respective subsidiaries, are carried out in market conditions.

3) Session N° 161	March 26, 2024	→ External Audit	• After reviewing the background, it is agreed to propose to the Company's Board of Directors, so that it in turn recommends it to the Ordinary General Shareholders' Meeting, the appointment of PwC as the Company's external auditors for the 2024 fiscal year. Secondly, EY is proposed.													
		→ Private Risk Raters	• It was agreed to propose to the Company's Board of Directors, so that it in turn would suggest it to the Ordinary Shareholders' Meeting, the appointment of the firms Fitch Chile Clasificadora de Riesgos Limitada and Feller Rate Clasificadora de Riesgo Limitada as private risk raters for fiscal year 2024.													
		→ Financial Statements	• The CFO presented a proposal requested to PwC, whose objective is to achieve an additional degree of reliability of the company's financial information. It was agreed to propose its approval to the Board of Directors.													
4) Session N° 162	May 8, 2024	→ Trial result	• Note was taken of the material fact published by Metrogas informing about the second instance sentence in the legal cases followed by Transportadora de Gas del Norte S.A. (Argentina); it was included in the Note on Subsequent Events of the Financial Statements as of March 31, 2024.													
															→ Financial Statements of the Company as of March 31, 2024	• It was agreed to submit the financial statements for the first quarter of fiscal year 2023 for the approval of the Board of Directors.
													→ Contracts with related companies, quarterly report	• The Company examined the background of transactions with related parties, which, as reported by management and the respective subsidiaries, are carried out under market conditions.		
		→ Related company transaction	• It was agreed to recommend to the Board of Directors the approval of the fees proposed by Portaluppi, Guzmán y Bezanilla Asesorías Limitada for legal services.													
5) Session N° 163	June 26, 2024	→ Investment portfolio	• The Investment Policy and the composition of the financial investment portfolio were reviewed in terms of instruments, currencies, limits, type of management and controls.													
		→ Financing Policy and Investment Policy	 The CFO explained the main characteristics and metrics of the Financing Policy, which aims to achieve financial sustainability to enable the continuity and growth of the business, as well as to maximize the value of the Company and provide an adequate long-term return to shareholders. It was agreed to propose to the Board of Directors the modifications to the Investment Policy proposed by third party experts in the field after an advisory process to the financial investment portfolio. 													
		→ New General Habituality Policy	• It was agreed to review the relevance of having a General Habituality Policy considering certain operations carried out by Empresas Copec.													
		→ General Conflict of Interest Policy	• The Secretary of the Committee was asked to review the General Policy on Conflicts of Interest in order to propose to the Committee any modifications to the policy if such a review reveals any that can be improved.													
		→ Related party transaction	• It was agreed to recommend to the Board of Directors the approval of the proposed work and fees of Portaluppi, Guzmán y Bezanilla Asesorías for legal services.

Fines and sanctions

NCG 461 (8.1) ⊘

In Empresas Copec S.A., during the year 2024, there were no enforceable sanctions in relation to customers, workers (including labor protection actions), environmental, free competition or regulatory non-compliance as part of Law N° 20,393 on criminal liability of legal entities. Likewise, no compliance programs or environmental damage remediation plans were approved or executed.

Patents, licenses, franchises, royalties and/or concessions

As of December 31, 2024, Empresas Copec S.A. has no patents, licenses, franchises, royalties and/or concessions.

Balances and transactions with related parties

Information on balances and transactions with related entities is included in Note 18 to the consolidated financial statements.

Property and facilities

As of December 31, 2024, the Parent Company owns its corporate offices of 2,714 m2, which are located at Av. El Golf 150, and maritime concessions in Arica and Caldera. The Company does not own any other relevant concessions, land and/or facilities, nor does it have land reserved for future projects.

Other securities

Information regarding other securities issued by the entity other than shares is contained in Note 3, section 3.4 of the consolidated financial statements.

Empresas Copec and its subsidiaries contribute to several initiatives in line with their business and context, in accordance with their internal policies. They also actively participate in associations and memberships, which are detailed on the following page.

→ GLOBAL COMPACT

The Company joined the Global Compact in 2021, which ratifies its commitment to the UN's Ten Fundamental Principles of Sustainability and the Universal Declaration of Human Rights. In this way, Empresas Copec is committed to generating alliances that contribute to the fulfillment of the United Nations 2030 Agenda and its Sustainable Development Goals.

→ ACCIÓN EMPRESAS

Through a partnership with Acción Empresas, an organization that is part of the World Business Council for Sustainable Development (WBCSD), the Company is part of the pilot group of five sustainability criteria, a commitment signed in 2022 that seeks to make progress in: carbon neutrality; human rights-due diligence; inclusion-diversity; biodiversity; and transparency-reportability.

\rightarrow ICARE

By contributing to Icare, the Company seeks to have a meeting point for systematic reflection on business management and its present and future approach, providing management levels with relevant information on the national and international environment, facilitating the understanding and timely evaluation of the forces driving the markets and the trends that influence business operations.

\rightarrow SOFOFA

Empresas Copec participates in Sofofa, created with the aim of validating the private sector as a reliable and relevant actor in the project to make Chile a developed, modern and inclusive country. It should be noted that the CEO of Empresas Copec, an elective director, is a member of Sofofa's Sustainable Business Development Committee, a space that fosters the exchange of experiences and learning that promote business development in this area.

\rightarrow FOCCO

Association that brings together managers and communication professionals in companies, consulting firms and institutions in Chile, with the purpose of helping to value the role of strategic communication in organizations to enhance corporate reputation. In 2024, the contribution of Empresas Copec S.A. to these entities amounted to US\$ 170,591. It is worth mentioning that the Company has not made any contributions to political parties in the reported period.

Analysis of main risk factors and management of subsidiaries

CLIMATE ACTION AND NATURAL

CAPITAL MANAGMENT

Through its subsidiaries and related companies, the Group has operations in different areas related to natural resources and energy. The relevant risk factors vary depending on the type of business. Accordingly, the management of each of the subsidiaries performs its own risk management, in collaboration with their respective operating units.

General risks

INNOVATION

→ Macroeconomic risks

Empresas Copec, through its subsidiaries, has operations in Chile and other countries, such as Colombia, United States, Canada, Panama, Peru, Uruguay, Brazil, Argentina, Mexico, Ecuador and, through its related companies, in Germany, Spain, Portugal and South Africa. A possible deterioration of economic conditions in these countries, or in other countries where it sells its products, could adversely affect its financial and operating performance. Likewise, fluctuations in the exchange rate, inflation, social instability, liquidity conditions for financing through debt or equity or changes in tax rates and import and export tariffs, as well as other political, legal, regulatory and economic changes originating in those countries, could have a negative effect on the financial and operating results of Empresas Copec, its subsidiaries and

related associates. Empresas Copec has been able to diversify these macroeconomic risks through its internationalization process, having today has productive assets in 16 countries, commercial presence in 30 and sales in more than 80.

→ Changes in laws and regulations in the operating sectors

Changes in laws and regulations in the industrial sectors in which Empresas Copec operates may affect the conditions under which the Company operates in such a way that they could have a negative effect on the business and, consequently, on the Company's results. In addition, potential changes in tax laws in the countries where the Company and its subsidiaries operate could generate negative effects on the results.

STATEMENTS

→ Facilities located in Chile are exposed to the risk of earthquakes and possible tsunamis

Chile is located in seismic territory, which exposes plants, equi ment and inventories to the risk of earthquakes and tsunamis. A potential earthquake or other catastrophe could severely damage facilities and impact estimated production and may not meet customer needs, resulting in unplanned capital expenditures or lower sales which could have a material adverse effect on the Company's financial results. The Company has taken into consideration the geographic conditions in the construction and modernization of its plants, in addition to having contingency plans in case any of these natural disasters occur. The subsidiaries have taken into consideration the geographic conditions in the construction and modernization of their plants, in addition to having contingency plans in case any of these natural disasters occur. In addition, they have insurance to protect part of the assets against these risks.

→ Climate change

A growing number of scientists, international organizations and regulators, among others, argue that global climate change has contributed, and will continue to contribute, to the unpredictability, frequency and severity of natural disasters (including, but not limited to, hurricanes, droughts, tornadoes, frost, storms and fires) in certain parts of the world. As a result, numerous legal and regulatory measures, as well as social initiatives, have been introduced in different parts of the world, in an effort to reduce greenhouse gas and other carbon emissions, which would be significant contributors to global climate change. In addition, public expectations regarding reductions in greenhouse gas emissions could result in increased energy, transportation and

raw material costs and may require the Company's subsidiaries to make additional investments in plant and equipment. Although we cannot predict the impact of eventually changing global climate conditions, nor can we predict the impact of legal, regulatory and social responses to concerns about global climate change, these occurrences could adversely affect the Company's business, financial condition, results of operations and cash flows.

Empresas Copec and its subsidiaries have strengthened their sustainability strategies, detecting potential risks and taking measures to mitigate the impact of these trends. In particular, Arauco contributes to the mitigation of this phenomenon as a carbon-absorbing company, which has been duly certified. In addition, it works on the investigation of several initiatives focused on reducing water consumption in its industrial operations and improving the adaptability of forests to climate change. Likewise, it has a Water Management Strategy based on the knowledge of basins and plantations, proper management of the resource, the contribution to neighboring communities and the development of communication and training actions. For its part, Copec has announced its climate change statements, establishing the goal of reaching carbon neutrality by 2030. In addition, by the end of 2021, the service stations were already carbon neutral.

ightarrow Social and governance risks

It is important to avoid the possibility that there may not be sufficient social support for the different businesses in which Empresas Copec's subsidiaries operate. In this regard, Empresas Copec and its subsidiaries have spent decades developing strategies, promoting social initiatives, detecting potential risks and taking measures to mitigate the impact of these trends. On

the other hand, poor governance in a company could generate risks of poor decision making, non-compliance with regulations, deficient information or poor management of conflicts of interest, among others. Empresas Copec's governance is based on solid principles and robust systems, and is permanently reviewed to adjust it to best practices.

→ Logistical risks

During some periods in recent years, logistical risks have been arising in the form of lack of containers, greater spacing of shipments, port closures at destinations, among others. These risks are mitigated through a long-term relationship with logistics operators and medium- and long-term contract structures for the export of its products.

→ Other risks

Since 2020, the COVID-19 virus has spread in the world population and caused significant social and market disruption. The impact of the virus has been declining and, as of today, is not significant. However, the effects to the global economy and to the Company of an eventual resurgence of this or any other pandemic scenario could include a variation in market prices for the products of some of the Empresas Copec's related companies, logistical complications, changes in demand, production restrictions, risks to the health and safety of employees, and variations in the prices of securities issued by the Group's companies, among other possible consequences.

On the other hand, at the end of 2019, Chile was affected by a climate of relative social and political instability, characterized by sporadic demonstrations and violence. In response to this, processes were defined to draft a new political constitution, which

was finally rejected in a plebiscite held in December 2023. The effects for the company of all of the above, or of eventual new similar developments in the country, are permanently evaluated by the company and will be communicated in due course.

Some international geopolitical events could have a significant impact on different aspects of the world economy. During these years, in particular, major military conflicts have developed in Eastern Europe and the Middle East. The consequences for the Company are still uncertain and are monitored, and will be reported, if relevant. As a result, demand for some forest products has been relatively affected.

☆ Forestry sector

→ Fluctuations in pulp, wood products and wood-based products prices

The prices of pulp, wood products and by-products can fluctuate significantly over short periods of time and are highly correlated to international prices. If the price of one or more of the products were to fall significantly, it could have an adverse impact on Arauco's revenues, income and financial condition. It should be considered that the main factors affecting the price of pulp, timber products and by-products are global demand, production capacity worldwide, the costs of production, the business strategies adopted by the largest integrated producers of pulp, timber products and by-products, and the availability of substitutes.

In addition, the prices of many of the products Arauco sells are to some extent related, and historical fluctuations in the price of one product have generally been accompanied by similar variations in the price of others. In order to mitigate the aforementioned risk, Arauco has a diversified portfolio of products and markets, and makes a continuous effort to improve cost efficiencies, seeking to increase its competitiveness.

ARAUCO does not engage in futures transactions or other hedging activities because, by maintaining one of the lowest

cost structures in the industry, the risks of price fluctuations are limited. With all other variables held constant, a variation of +/- 10% in the average pulp price during the year would mean a variation in income for the year after taxes of +/- 48.9% (equivalent to US\$ 232.9 million) and in shareholders' equity of +/- 1.9% (equivalent to US\$ 163.0 million).

→ Increased competition in the markets where ARAUCO participates

The subsidiary faces high competition worldwide in each of the markets where it operates and in each of its product lines. The pulp industry is sensitive to changes in the industry's capacity and the inventories held by producers, as well as to cyclical changes in the world economy. All of these factors can significantly affect selling prices and, consequently, Arauco's profitability. Increases in global supply in the pulp or timber market could materially and adversely affect Arauco's business, financial condition, results and cash flow. In order to mitigate the aforementioned risk, Arauco makes a continuous effort to improve cost efficiencies, seeking to increase its competitiveness.

FINANCIAL
STATEMENTS

\rightarrow Evolution of the world economy, particularly the Asian and U.S. economies

The global economy, and in particular worldwide industrial production, is the main driver of demand for pulp, paper and timber products. A decline in the level of activity, whether in the local or international market, can affect demand and the selling price of Arauco's products and, consequently, its cash flow, operating and financial income. Arauco's business could be particularly affected if economic conditions in Asia and the United States change.

→ Pests and forest fires

Arauco's operations are exposed to pests that can affect the forests that supply raw materials, as well as to forest fires that can spread to manufacturing plants. The presence of both risks could produce significant negative impacts on ARAUCO's assets.

To address the threat of forest fires, ARAUCO has increasingly strengthened its preventive and firefighting measures, its relationship with communities, forest management and other measures, through several initiatives consolidated in the "Forests with a Future" program. In addition, it has insurance policy coverage.

→ Environment-related risks

ARAUCO is subject to environmental laws and regulations in the countries where it operates. These regulations refer, among other matters, to the elaboration of environmental impact assessments for projects; the protection of the environment and human health; the generation, storage, handling and disposal of waste; emissions into the air, soil and water; and the remediation of environmental damage, when applicable.

As a manufacturer of forest products, Arauco generates emissions of solid, liquid and gaseous elements. These emissions and waste generation are subject to limits or controls prescribed by legal standards or by its operating permits. Authorities may require increased legal requirements to control the environmental impacts of projects. Arauco has made, and plans to continue to make, disbursements to remain in compliance with environmental laws. Notwithstanding Arauco's policy of strictly complying with all requirements established by law, any eventual failure to comply with environmental laws and regulations could result in temporary or definitive suspension of activities, fines, penalties or the imposition of obligations. Arauco has strict internal environmental policies, with the objective of minimizing the impact of projects and operations on communities and the environment, partially mitigating the aforementioned risks.

Future changes in environmental laws or in their application, interpretation or enforcement, including stricter requirements

related to harvesting, emissions and climate change regulations may result in considerable increases in capital needs, operating costs and limited operations.

→ Temporary shutdown of any of ARAUCO's plants.

A significant interruption in any of the production facilities in the forestry sector could result in Arauco not being able to meet the demand of its customers, failing to meet its production targets and/or requiring unplanned investments, which would result in lower sales and could have a negative effect on its financial results. Arauco's facilities, in addition to being exposed to earthquake and, in some parts, tsunami risks, may unexpectedly stop operations due to a series of events such as: i) unscheduled maintenance shutdowns; ii) extended power outages; iii) critical equipment failures; iv) fires, floods, hurricanes or other catastrophes; v) chemical spills or releases; vi) boiler explosion; vii) labor problems and social conflicts; viii) terrorism or terrorist threats; ix) sanctions by environmental or occupational safety authorities; x) absence of critical inputs; xi) blockades and strikes; and (xii) other operational problems.

To partially or totally mitigate the aforementioned points, Arauco takes the following measures, among others: i) regularly scheduled maintenance of production plants; ii) biomass energy generation plants; iii) insurance policies; (iv) strict internal environmental policies; investment in relation to communities and collaborators; strong focus and investment in occupational safety.

→ Exchange rate and interest rate risks

Most of the related companies in the forestry sector manage their accounting in U.S. dollars. However, they are subject to the risk of losses from exchange rate fluctuations in cases where assets and liabilities are denominated in currencies other than the functional currency.

With all other variables constant, a variation of +/- 10% in the exchange rate (\$/US\$) would have meant a variation on the income for the year after tax of +/- 0.8% (equivalent to +/- US\$4,027,000), and of +/- 0.03% of shareholders' equity (equivalent to +/- US\$ 2.819.000).

In relation to the economic risks derived from variations in the interest rate, as of December 31, 2024, 10.4% of the bonds and loans with banks accrued interest at a variable rate. Therefore, a change of +/- 10% in the interest rate would affect income for the year after tax by +/- 0.4% (equivalent to +/- US\$ 2,132,000) and shareholders' equity by +/- 0.02% (equivalent to +/- US\$ 1.493.00).

Forestry companies use financial derivative contracts to hedge part of these risks.

The variations indicated in this section correspond to fluctuation ranges that are considered possible given market conditions.

Energy sector

In the distribution of liquid fuels and liquified gas, the Company, through its subsidiaries Copec and Abastible, holds a leading position in the Chilean market. It also participates in Colombia, through its related companies Terpel and Colgas, and in Peru and Ecuador through Solgas and Duragas, Abastible's subsidiaries. In these countries, a significant part of the supply is obtained from local companies. However, there are conditions to access alternative fuel supply markets, a situation that allows to optimize the supply and distribution of products to the public. It is possible that local and international markets may be affected by economic, geopolitical and other situations that make access to supply difficult.

The relevant risk for the fuel distribution business, and also for the liquified gas business, is essentially in the distribution margin, rather than in the price level of oil and its derivatives. The distribution margin depends mainly on the competition factors that take place in the markets on a daily basis. Since these are products with low price elasticity, eventual increases or decreases in the price of crude oil or in the exchange rate have relatively little effect on the volumes traded in the market. Notwithstanding the above, the value of the company's inventory is impacted by variations in international fuel prices. The policy of

Notwithstanding the above, the value of the company's inventory is impacted by variations in international fuel prices. The policy of the subsidiary Copec is not to hedge the permanent stock, since the increases and decreases taking place are compensated in the long term. This is not the case with occasional overstocks, where, given the market pricing methodology, no hedging instrument has been found to fully mitigate this risk.

In turn, fuels compete with alternative energy sources. In the case of liquified gas, the main substitutes are natural gas, firewood, diesel and electricity. On the other hand, electromobility is a trend that has gained strength in many countries, with a more limited scope for now in Chile and the region, which could affect the liquid fuels distribution business and, therefore, impact the Company's results. This could be accelerated by public policies eventually implemented by the countries in which the subsidiaries operate. Copec is already investing in electromobility, with the goal of positioning itself as a leader in this new market, through initiatives such building a network of electric charging stations and participating in electric bus terminals. Also, it is investing in start-ups related to energy, energy, mobility and convenience, among other projects, and seeking alternative ways to monetize its assets, such as last-mile logistics or digital means of payment.

The related companies in the fuel sector, which represent approximately 30% of the Company's total assets, manage their accounting in Chilean pesos, Colombian pesos and Peruvian soles, and both their financial assets and liabilities and most of their income are denominated in these currencies, so exposure to exchange rate variations is significantly reduced. However, in the parent company, variations in the exchange rate affect the valuation in dollars of both the investments in this sector and the results obtained. Empresas Copec partially mitigates this risk by hedging part of the results of Copec and Abastible through derivatives.

SUSTAINABLE INVESTMENT
AND MANAGMENT STRATEGY

GOBERNANCE AND INTEGRITY 04. INNOVATION IN THE DNA 05.
CLIMATE ACTION AND NATURAL
CAPITAL MANAGMENT

→ Risks related to the environment

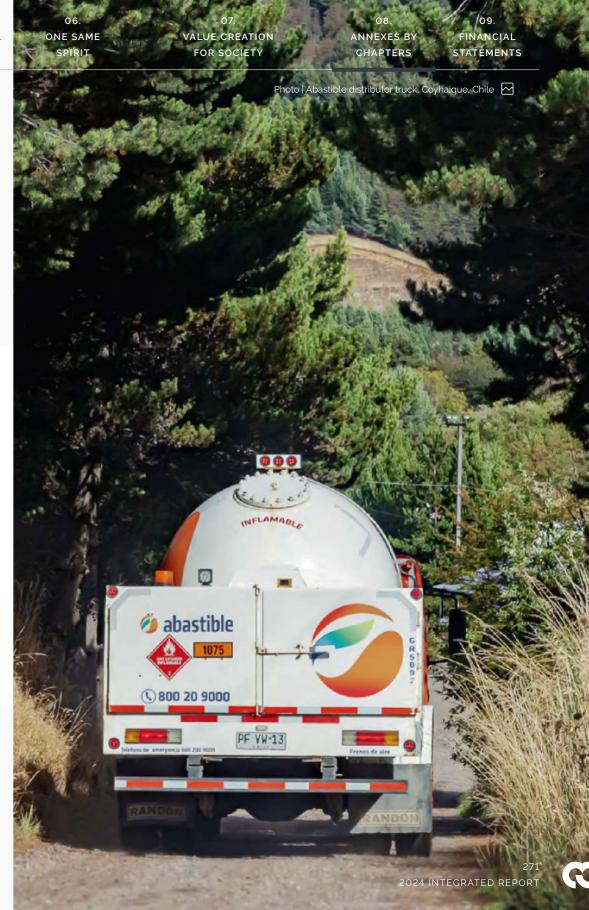

In Chile, the related companies in the energy sector are regulated by Law N° 18.410, which establishes the creation of the Superintendency of Electricity and Fuels with the purpose of supervising and overseeing compliance with legal and regulatory provisions and technical standards on generation, production, storage, transportation and distribution of liquid fuels, gas and electricity, to verify that the quality of the services provided to users is as indicated in such provisions and technical standards, and that the aforementioned operations and the use of energy resources do not pose a danger to persons or things. The above is in addition to Supreme Decree N° 160 of the Ministry of Economy, Development and Reconstruction on "Safety Regulations for Facilities and Operations of Production and Refining, Transportation, Storage, Distribution and Supply of Liquid Fuels."

Future changes in environmental laws or their application, interpretation or enforcement may result in significant increases in capital requirements, operating costs and limited operations.

The related companies in the energy sector have the main certifications in safety, occupational health and environmental management standards for the processes of sales, transportation, operation, storage and supply of fuels.

→ Changes in laws and regulations

Changes in laws and regulations in the fuel and liquified gas industries could affect the conditions under which operations are carried out, in such a way as to have a negative effect on the business and, consequently, on the Company's results.

09. FINANCIAL STATEMENTS

Food sector

For this sector, the availability of pelagic species in the different fishing zones is a determining factor in its results. A second risk factor is the market prices of fishmeal and fish oil, which are obtained from the balance between supply and demand, with Peruvian production being a determining factor in terms of supply, and consumption in Asia in general and China in particular, in terms of demand.

Since a large part of its production is exported, the results of operations in this sector are sensitive to exchange rate fluctuations and to policies to promote exporters in competing countries. Fishmeal and fish oil are traded mainly in dollars, so a significant percentage of the revenues of companies in this sector is indexed to this currency. Given this characteristic, bank debt generally held by the companies corresponds to shipping prepayments in dollars. Therefore, the necessary conversion to Chilean pesos of a significant portion of the returns is exposed

to exchange rate fluctuations, a risk that can be limited with the use of forwards or other financial instruments.

Sales agreed in currencies other than the U.S. dollar are generally converted into such currency through the use of forward contracts that dollarize such revenues. This eliminates the risk associated with the volatility of those currencies in relation to the U.S. dollar. Costs of the fisheries sector are highly sensitive to fluctuations in fuel prices, particularly diesel and bunker oil.

On the regulatory side, the application of fishing quotas, closures and restrictions imposed by the authorities can significantly affect the production of subsidiaries and related companies in this sector. A few months ago, a new fishing law started its legislation process in Congress, which aims to modify the existing regulations for this industry.

Insurance

The Company and its subsidiaries maintain insurance on its The risk associated with operational, commercial and adminmain assets, which cover fire, earthquake, damages due to stoppages, civil liability and other risks of lesser incidence on its net worth. These risks are reasonably protected through first class domestic companies, which reinsure most of the significant risks with first class reinsurers based in Europe.

istrative activities is evaluated year by year, which allows for adequate management, incorporating appropriate hedges or modifying existing ones, in accordance with market offers.

Empresas Copec S.A. is governed by Law N° 18,046 on corporations, Law N° 18,045 on the securities market and the applicable regulations of the Financial Market Commission.

The forestry sector in Chile is regulated by the Forestry Law of 1931, Decree Law N° 701 of 1974, and Law N° 20,283 on the recovery and conservation of native forests. These regulations establish requirements for forest exploitation and management, including the need for management plans approved by the National Forestry Corporation (CONAF) and penalties for noncompliance. In addition, Law N° 19,300 regulates the environmental impact of forestry activities, requiring approved environmental impact studies or statements prior to project implementation.

In other countries, the forestry industry is regulated by different regulations, including:

• Brazil: The Forestry Code (Law N° 12,651/2012) establishes rules for conservation, sustainable use and recovery of degraded areas.

- Colombia: Decree 1073 of 2015 and its amendments establish environmental provisions applicable to the energy sector, regulating the generation, transmission, distribution and commercialization of electricity, as well as environmental management in the exploration and exploitation of hydrocarbons.
- United States: The Endangered Species Act and the Clean Water Act influence forestry activities, along with specific state regulations.
- European Union: The EU Timber Regulation (EUTR) prohibits the marketing of illegally harvested timber and requires traceability in the supply chain.

The subsidiaries of the energy sector in Chile are regulated by Law N° 18,410, which establishes the creation of the Superintendency of Electricity and Fuels (SEC), whose purpose is to oversee compliance with legal and regulatory provisions, as well as technical standards on generation, production, storage, transportation and distribution of liquid fuels, gas and electricity, to verify that the quality of the

services rendered to users is as indicated in said provisions and that the operations and use of energy resources do not constitute a danger to persons or goods.

In addition, Supreme Decree N° 160 of the Ministry of Economy, Development and Reconstruction on "Safety Regulations for Facilities and Operations of Production and Refining, Transportation, Storage, Distribution and Supply of Liquid Fuels."

At the national level, subsidiaries in the food sector are regulated, since 2013, by Law N° 20,657, which replaced the General Law on Fisheries and Aquaculture (LGPA) N° 18,892. This regulation seeks to privilege scientific criteria in fisheries management, based on concepts such as Maximum Sustainable Yield (MSY) and Biological Reference Points (BRP). It also introduces the Tradable Fishing Licenses (LTP for its acronym in Spanish), which correspond to fractions of the annual industrial quota, which are awarded to each fishing company according to its historical catches. In addition, this law establishes a bidding mechanism of up to 15% of

the industrial fraction of the overall quota, when the latter exceeds certain limits, and includes a specific tax, payment of patents on operating vessels, a new division of annual global quotas, which implies a transfer of quotas from the industrial sector to the artisanal sector, and new inspection requirements for artisanal vessels over 12 meters in length.

On January 2, 2024, a bill was submitted to Congress to replace Law N° 20,657, which is currently being processed.

At the international level, the South Pacific Regional Fisheries Organization (SPRFMO), ratified by Chile, entered into force in August 2012. The decisions of the SPRFMO are binding for the countries of the Pacific Coast that signed the agreement, defining the global annual catch quota of fishery resources to which each member country must adhere.

In addition, Law N° 19,496 on the protection of consumer rights and Decree Law 211, which establishes rules for the defense of free competition, among other laws and regulations, are applicable to all activities.

Domestic or foreign regulatory agencies with oversight powers

In Chile, the main auditing entities are:

- Financial Market Commission (CMF), responsible for the supervision and regulation of the parent company in financial and corporate governance matters.
- Internal Revenue Service (SII), which oversees compliance with corporate tax obligations.
- CONAF, in charge of approving and supervising forest management plans.
- Environmental Superintendency, que fiscaliza el cumplimiento de la normativa ambiental.
- Electricity and Fuels Superintendency (SEC), responsible for supervising the energy sector.
- National Fishing and Aquaculture Service (Sernapesca), oversees the control of the fishing and aquaculture sector.
- **Health Service**, which supervises sanitary conditions in food production.
- Labor Department, which oversees compliance with the law. in Chile.
- National Consumer Service, which oversees compliance with the provisions of Law N°. 19,496 on the protection of consumer rights and all related regulations.
- National Economic Prosecutor's Office, responsible for defending and promoting free competition in all markets of the Chilean economy.

Internationally:

• Brazil: The Brazilian Institute for the Environment and Renewable Natural Resources (IBAMA) oversees compliance with forestry legislation.

[⊘] Indicator verified by Deloitte. For more information see section "External verification" in chapter 8.

The increase in Scope 3 emissions is attributed to the forestry and energy sectors. On the one hand, there was an update in the calculation methodology in the shipping industry that impacts the emissions associated with the transportation and distribution of products of the subsidiary ARAUCO, and the increase in the acquisition of fertilizers for application in new forests. On the other hand, the subsidiary Terpel recalculated its footprint due to certain factors such as the updating of CO₂ emission coefficients in Scope 2 and the reclassification of some emission sources, transferring Scope 3 emissions to Scope 1. In identifying opportunities for improvement, Terpel focused on the consolidation of emissions in Scope 3. In addition, emissions from the energy consumption of the Voltex and Gogoro business lines were analyzed, as well as emissions generated by the transportation and final disposal of waste.

^{2.} Includes all of the subsidiary's production facilities, except the wood plants in Puerto Aglomerado Zarate in Argentina. Volatile Organic Compounds (VOC) were not measured in the five Pulp and Energy plants in Chile and Argentina. 100% of the panel mills meet VOC content and emissions standards, and all products are California Air Resources Board (CARB) or E2/E1 certified, which means they have low formaldehyde (VOC) emissions.

^{3.} In the food sector, reported seawater extraction is high due to the operational need to pump water for fish preservation, cleaning of vessels and equipment. In addition, the volume of effluent discharged is greater than the volume extracted, since the fish caught contains a significant percentage of water in its biomass, which is released during processing on board and later on land. This phenomenon explains the difference between extraction and discharge, reflecting the natural dynamics of the water contained in marine organisms.

^{5.} In 2024, bark recovered for combustion and sludge from the effluent plant at ARAUCO's Arauco Line 2 plant were considered in the "Incineration with energy recovery" category.

On the other hand, packaging wood that is incinerated without energy recovery is excluded from the total waste generation. Finally, the category "Waste disposed of in other ways" includes the disposal of industrial waste from pulp mills.

^{6.} The values reported in 2023 for hazardous waste from the food sector were adjusted due to the revision and update of the data collection and classification methodology.

- Cornorate nurnose
- Constitutive documents
- External verification

Empresas Copec carries out materiality assessments with the direct participation of internal and external stakeholders. These are periodic exercises where, at least once a year, the most relevant issues that may impact the Company's social environment or have implications for its future development are reviewed.

At the beginning of 2024, a dual materiality exercise was conducted for the first time⁽¹⁾, aiming to integrate environmental, social and governance criteria, and thus understand and manage, in a more efficient, sustainable and responsible way, the business risks and opportunities (financial materiality) and the environmental and social

impacts on the surrounding areas (materiality of impacts). This process included the early participation of the risk area in its definition and analysis categories, in order to ensure consistency with the main corporate risk management systems. At the end, the material issues identified were validated by the CEO and approved by the Board of Directors.

STEP 1: SETTING PARAMETERS

- → Determine the material issues of Empresas Copec and its subsidiaries using three parameters: importance, impact and influence.
- ightharpoonup Each parameter includes clearly defined criteria to improve the robustness of the process, as well as to eliminate subjectivity to the greatest extent possible.

STEP 2: IDENTIFY LIST OF MATERIAL ISSUES

- → Define a list of issues to be assessed, based on:
- Relevant ESG frameworks and standards (including Global Reporting Initiative GRI, SASB, TCFD and CMF NCG N° 461), current legislation, global, market and industry trends and media.
- Previous materiality matrix and emerging issues.
- Sustainability frameworks, ratings and standards.

STEP 3: PRIORITIZE

- → Stakeholder engagement to prioritize material issues included interviews conducted with members of the Board of Directors of Empresas Copec, executives of the Company and subsidiaries, investors, suppliers, auditors, ESG consultants, *think tanks* and NGOs.
- → The prioritization criteria included probability and impact parameters under the perspective of financial and environmental relevance.

STEP 4: ANALYZE AND VALIDATE STEP

- → The material issues were analyzed by identifying three prioritization ranges, which allows to focus on the initiatives that will be worked on in the Company in the short and medium term.
- → The materiality matrix was validated by the CEO and submitted to the Board of Directors.

Value created

In order to identify and manage in a timely manner the issues that stakeholders consider most relevant, Empresas Copec classifies stakeholders into direct and indirect, according to their dependence on the Company and its subsidiaries. The former are those who, through their work, have a direct impact on the management of Empresas Copec, while the indirect stakeholders are related through their impact on the operation of the subsidiaries.

In 2024, future generations were included among the priority stakeholders, as a result of the discussion and announcement of the new corporate purpose, which seeks to promote sustainable investments and a long-term vision to contribute

hope for the generations to come. These are the people who will live in the future: those who have not yet been born or are just beginning to develop. They are the ones who will inherit the decisions, resources and challenges we face today.

In the first instance, attention to this particular stakeholder group has been considered in order to include a vision of the future in all guidelines, policies and challenges established within the Group. It has also been included in the Company's communications and exchanges with its external audiences. An example of this is the campaign on short-termism developed by Empresas Copec at the public opinion level.

Communication strategy

Empresas Copec has a communications strategy that seeks to connect with the Company's different stakeholders through a corporate narrative in line with its purpose and based on the pillars of sustainability, business, innovation and people.

The plan minimizes information asymmetries and facilitates the regular delivery of content in a timely, transparent, truthful and representative manner to the different stakeholders.

MIDDLE	REVIEW
Investor Relations Area	 → Area responsible for assisting and guiding investors and analysts on market behavior, business performance, main risks and the financial, economic and legal situation. → Conducts periodic presentations of results and participates in national and international conferences.
Webcast	→ Investor Relations platform that seeks to provide investors with timely information on the Company's results via the Internet and online inquiries.
Institutional video of results	→ The purpose of this quarterly report is for CEO to present a strategic vision of the main progress, milestones and challenges of Empresas Copec and its subsidiaries.
Corporate and investor website	→ They provide relevant and updated information, such as the Company's bylaws, minutes of the Shareholders' Meetings, financial statements, annual reports, corporate magazines, earnings reports, news, manuals and corporate policies, among other contents.
External media	→ The Company seeks to maintain a fluid and transparent relationship with the media through different channels such as communication with editors and journalists, sending press releases, corporate video, among others, so that Empresas Copec's information reaches civil society through the press. In addition, the media is provided with timely information on the Company's management.
Social networks	 → On LinkedIn, the Company shares publications that report on progress, milestones and relevant news of the Company and its subsidiaries. → The Company has a YouTube channel where all official videos and live broadcasts are posted, such as the last Shareholders' Meetings.
Corporate magazine	→ This institutional magazine is published digitally every four months, with the purpose of providing information on the different initiatives developed by the Company and its subsidiaries, investments and notes of general interest, providing local and global coverage.
Internal media	 → Bidirectional in nature, it seeks to keep employees informed in an efficient, transparent and timely manner. Among them are the corporate newsletter, strategic alignment meetings, conversations, internal communications and instances of dialogue to address contingent issues. → In addition, an intranet, a digital platform designed to support employees by providing them with access to resources such as information, files, workflows and tools, was launched in 2023.
Hotline	→ Communication channel detailed on page 58 of this document.

Empresas Copec recognizes that climate change represents a global challenge with significant implications for its business and society in general. In this context, the Company has adopted the Task Force on Climate-related Financial Disclosures (TCFD) framework, to strengthen transparency in the disclosure of climate risks and opportunities, aligning its strategy with international best practices.

This index details the way in which Empresas Copec and its subsidiaries address governance, strategy, risk management and metrics associated with climate change, providing information on the initiatives and processes implemented to assess and mitigate these impacts.

	a) Shareholders' Meeting/Board of Directors oversight over climate risks and opportunities.	89, 102	→ Corporate governance structure→ Risk Management	The Board of Directors of Empresas Copec approves and supervises the strategic and management guidelines, establishing and monitoring the strategy and Risk Management Policy, which includes the management of issues related to climate change. It also approves and supervises the Sustainability Policy and the Integrated Report, ensuring the follow-up of sustainability initiatives established by the Company's regulatory bodies.
	b) Management's role in the assessment and management of climate risks and opportunities	102, 110	→ Risk Management→ Sustainability	The highest level management position at Empresas Copec responsible for addressing climate-related issues is the Director of Sustainability and Corporate Affairs. This area integrates sustainability and climate issues into the Company's strategy, managing risks and opportunities and developing the Climate Change Roadmap. It also promotes environmental performance, ensures compliance with environmental reports and acts as a benchmark in sustainability, sharing knowledge and experience within Empresas Copec and its subsidiaries.
				This director reports monthly to the CEO on sustainability issues and, when necessary, makes presentations to the Board of Directors and/or the Directors' Committee. In turn, the CEO reports monthly to the Board of Directors on relevant issues in this area.
Φ				Sustainability and Corporate Affairs are also leads implementation of TCFD recommendations, collaborates with subsidiaries to share best practices on sustainability and monitors progress on climate commitments through the Council of Subsidiaries.
ernance				In 2024, a Sustainability Executive Committee was established, whose objective is to internalize non-financial factors in decision making and to strengthen the execution capacity in environmental, social and governance issues.
Gov				At the subsidiary level:
				• ARAUCO has a Risk Management Policy, a corporate framework and a risk matrix to define work plans to prevent losses or mitigate impacts. Climate management is integrated with other non-financial issues and its reporting to the Board of Directors varies according to the subject matter and context. The company has a Sustainability Committee and a Climate Change Committee, composed of the vice-chairman, the chief executive officer and other senior executives, who ensure long-term economic, social and environmental management.
				• Copec implements a Risk Management Model, based on international standards and industry best practices. This model, with a preventive approach, allows the company to anticipate situations or events that may compromise the fulfillment of its corporate objectives. Its application covers the entire value chain, including its employees, dealers, suppliers and contractors.
				• Abastible has a Comprehensive Risk Management Policy that establishes a framework for identifying causes, consequences and preventive and mitigating measures. Its Sustainability Committee supports the deployment of the sustainability strategy in all areas, reporting on progress to the CEO and the Board of Directors.
				Nutrisco has a Sustainability Committee in charge of monitoring projects and compliance with sustainability initiatives.

gy	a) Climate-related risks and opportunities identified by the organization in the short, medium and long term.	105 266-272	 → Strategic Risks → Analysis of main risk factors and management of subsidiaries 	Taking into consideration the nature of the businesses of Empresas Copec and its subsidiaries, the principal risks and opportunities associated with climate change are discussed in the section: "Analysis of main risk factors and management of subsidiaries". It should be noted that ARAUCO and Copec have carried out physical risk and transition scenario evaluations with experts in the field, with the objective of identifying risks and
Strategy	b) Impact of climate-related risks and opportunities on the organization's business, strategy and financial planning.	81 129 130-132 133	 → Mina Justa → Foresty sector → Energy sector → Food sector 	opportunities related to climate change. Subsequently, the financial impact that these would have on the business has been calculated and mitigation plans have been proposed. In this regard, the assessments consider the following scenarios: Business As Usual (BAU): a scenario based on current market expectations. 2 Degree Scenario (2DS): An orderly global transition that limits warming to well below 2 by the year 2100.
	c) Resilience of the organization's strategy, taking into account different climaterelated scenarios, including a scenario of 2°C or less.	128 - 135	→ Climate route to decarbonization	 RCP 4.5 (or SSP2 4.5): A stabilization scenario with moderate emissions. RCP 8.5 (or SSP5 8.5): A high emissions scenario with no additional climate policies. IEA 2DS: A scenario aligned with the International Energy Agency that establishes measures to keep the temperature increase below 2 degrees. These assessments allow Empresas Copec and its subsidiaries to anticipate and manage the effects of climate change on their operations and business strategy.
	a) Organizational processes for identifying and assessing climate-related risks.	103 104	→ Three-line model→ Risk management process	Empresas Copec and its subsidiaries identify climate change as a catalyzing factor that can influence the nature, severity and magnitude of other key risks in the Company's management framework. The identification, evaluation and management of climate risks are carried out within each risk area, with responsibility for coordinating and monitoring the degree of progress and compliance with these activities.
	b) Organization's processes for managing climate-related risks.	128 - 135	ightarrow Climate route to decarbonization	At Empresas Copec, management is responsible for the continuous monitoring of risks in its daily activities, maintaining permanent communication and consultation with directors, senior executives and committees. Oversight of sustainability matters is the responsibility of the Sustainability and Corporate Affairs director, which reports directly to the CEO.
Risk Management	c) How processes for identifying, assessing, and managing climate risks are integrated into the organization's overall risk management.	102	→ Risk Management	In turn, the CEO reports monthly to the Board of Directors on relevant sustainability issues. In addition, the Board of Directors annually subscribes to the information contained in the Integrated Report. During 2024, an Executive Sustainability Committee was established with the objective of internalizing non-financial factors in decision-making and strengthening execution in environmental, social and governance matters. Among its functions, the committee annually identifies the most relevant emerging risks for the next 3 to 5 years, within which climate change has been highlighted as a material factor. This process involves several areas in the identification, quantification and prioritization of risks. At the subsidiary level:

plans. This committee ensures that risk management is integrated into all processes and aligned with ARAUCO's objectives, strategies and organizational culture.

a risk management culture within the company and monitor management's adherence to the Risk Management Framework and Risk Strategy. These structures allow Empresas Copec and its subsidiaries to manage climate risks strategically and in line with their corporate objectives.

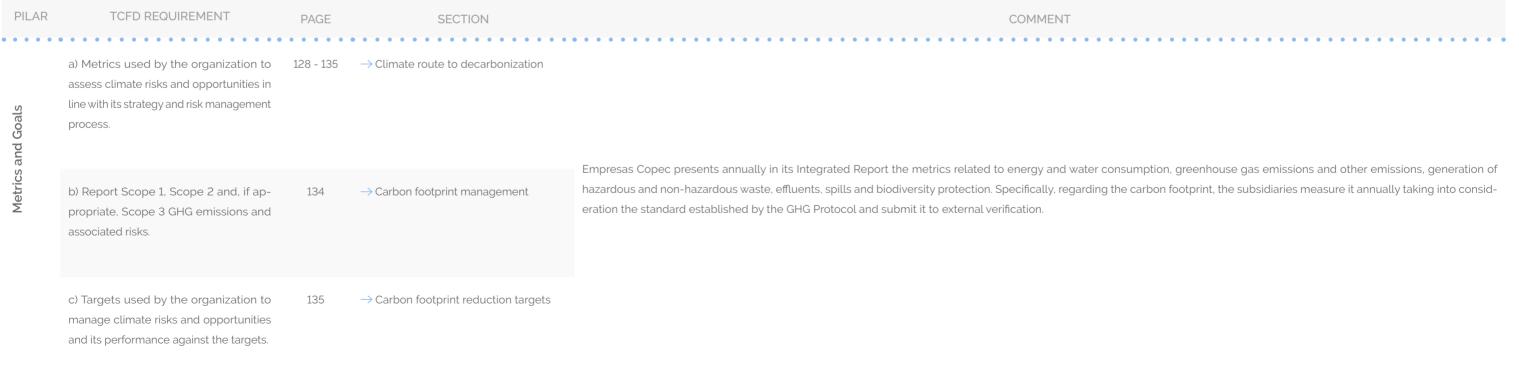

• Copec has an Audit and Risk Committee, whose main function is to validate the risk management strategy, oversee the correct application of the Risk Management Policy, foster

FINANCIAL

STATEMENTS

Index SASB

NCG 461 (8.2) **⊙**

Empresas Copec reports sustainability information following the definitions of the *Sustainability Accounting Standards Board* (SASB). According to SASB's *Sustainable Industry Classification System* (SICS), the main classification corresponds to the Oil and Gas - Refining and Marketing industry.

However, given the diversity of sectors in which it operates, the Company considers it relevant to include additional metrics applicable to other industries within the SASB framework. Therefore, in addition to the primary industry, relevant information is provided for the Forestry Management, Pulp and Paper Production, and Meat, Poultry and Dairy sectors.

This approach seeks to provide stakeholders with a more comprehensive view of the Company's activities and their impact on sustainability.

	→ Area of forestland certified to a third-party forest management standard, percentage certified to each standard	• RR-FM-160a.1	41
Ecosystem services and impacts	→ Area of forestland with protected conservation status	• RR-FM-160a.2	41, 286
	→ Area of forestland in endangered species habitat	• RR-FM-160a.3	286
	→ Description of approach to optimizing opportunities from ecosystem services provided by forestlands.	• RR-FM-160a.4	145-149
Rights of indigenous peoples	→ Area of forestland in indigenous land	• RR-FM-210a.1	286
Rights of indigenous peoples	\rightarrow Description of engagement processes and due diligence practices related to human rights, indigenous rights and the local community.	• RR-FM-210a.2	174, 190
Climate change adaptation	→ Description of the strategy to manage opportunities and risks of forest management and timber production due to climate change.	• RR-FM-450a.1	128, 129, 134
	→ Area of forestland owned, leased, or managed by the entity.	• RR-FM-000.A	42-44
Activity metric	ightarrow Total standing timber inventory	• RR-FM-000.B	42
	→ Timber harvest volume	• RR-FM-000.C	42
Greenhouse Gas Emissions	→ Global gross Scope 1 emissions	• RR-PP-110a.1	134, 279
	ightarrow Analysis of the long- and short-term strategy or plan to manage Scope 1 emissions, emission reduction targets and analysis of performance against those targets.	• RR-PP-110a.2	128, 135
Air quality	→ Air emissions of the following pollutants: (1) NOx (excluding N2O), (2) SO2, (3) volatile organic compounds (VOC), (4) particulate matter (PM) and (5) hazardous air pollutants (HAP).	• RR-PP-120a.1	281
Energy management	\rightarrow (1) Total energy consumed, (2) percentage of electricity from grid, (3) percentage from biomass, (4) percentage from other renewable energies	• RR-PP-130a.1	278
Water management	\rightarrow (1) Total water withdrawn, (2) total water consumed, percentage of each in regions with high or extremely high Baseline water stress.	• RR-PP-140a.1	282, 283
	→ Description of water management risks and analysis of strategies and practices to mitigate them.	• RR-PP-140a.2	136-139
Supply chain management	→ Percentage of wood fiber sourced from (1) third-party certified forestlands and the percentage for each standard, as well as (2) complying with other fiber sourcing standards and the percentage for each standard.	• RR-PP-430a.1	41
	→ Amount of recycled and recovered fiber procured	• RR-PP-430a.2	140, 284-285
	ightarrow Pulp production	• RR-PP-000.A	44
Activity metrics	→ Paper production	• RR-PP-000.B	ARAUCO does not manufacture paper
	ightarrow Total wood fiber sourced	• RR-PP-000.C	44

INDUSTRY	FOOD SECTOR			
		→ Global gross Scope 1 emissions	• FB-MP-110a.1	134
	Greenhouse gas emissions	→ Analysis of the long- and short-term strategy or plan to manage Scope 1 emissions, emission reduction targets and analysis of performance against those targets	• FB-MP-110a.2	128, 135
	Energy management	\rightarrow (1) Total energy consumed, (2) percentage of electricity from grid, (3) percentage of renewables	• FB-MP-130a.1	278
		→ (1) Total water withdrawn, (2) total water consumed, percentage of each in regions with high or extremely high baseline water stress	• FB-MP-140a.1	282, 283
	Water management	→ Description of water management risks and analysis of strategies and practices to mitigate them	• FB-MP-140a.2	136 - 139
		→ Number of incidents of non-compliance with water quality permits, standards, and regulations	• FB-MP-140a.3	136
		→ Amount of manure and animal waste generated, percentage managed according to a nutrient management plan	• FB-MP-160a.1	Food sector operations do not include manure or animal waste generated by working only with seafood products.
dairy	Land use and ecological impacts	→ Percentage of pasture and grazing land managed according to Natural Resources Conservation Service (NRCS) conservation plan criteria	• FB-MP-160a.2	Food sector operations do not include livestock grazing activities.
and da		→ Production of animal proteins from concentrated animal feeding operations (CAFOs)	• FB-MP-160a.3	Food sector operations do not include livestock activities where CAFOs are developed.
poultry and	Food safety	→ Global Food Safety Initiative (GFSI) audit: (1) rate of non-compliance and (2) associated corrective actions rate for a) major and b) minor nonconformities	• FB-MP-250a.1	Nutrisco's 2024 audit shows the following results: (1) 2.7% (2.a) 0% (2.b) 2.7%
Meat, p		→ Percentage of supplier facilities certified under a Global Food Safety Initiative (GFSI) food safety certification program	• FB-MP-250a.2	58% of supplier facilities are certified
Σ		ightarrow (1) Number of recalls issued and (2) total weight of products recalled.	• FB-MP-250a.3	Nutrisco had no product recalls during 2024
		→ Analysis of markets that prohibit the import of the entity's products	• FB-MP-250a.4	There are no markets that prohibit the importation of the company's products.
	Use of antibiotics in animal production	→ Percentage of animal production that received (1) medically important antibiotics and (2) non-medically important antibiotics, by type of animal	• FB-MP-260a.1	The food sector does not have fish hatcheries; wild fish are used.
	Workforce Health and safety	ightarrow (1) Total Recordable Incident Rate (TRIR) and (2) fatality rate	• FB-MP-320a.1	304
	workloice Health and Salety	→ Description of activities to assess, monitor and mitigate acute and chronic respiratory conditions	• FB-MP-320a.2	158 - 161
		→ Percentage of pork produced without the use of gestation crates	• FB-MP-410a.1	This SASD indicator does not apply directly to Empresses
	Animal care and welfare	→ Percentage of sales of eggs from cage-free hens	• FB-MP-410a.2	This SASB indicator does not apply directly to Empresas Copec's food sector, since pork and eggs are not part of
		→ Percentage of production certified to an third party animal welfare standard	• FB-MP-410a.3	the products offered by the companies.

Integrity

To be of integrity and consistency in order to always try to do the right thing

Excellence Giving the best of each one of us to do things with excellence

We aim to act with rectitude and transparency, building relationships based on trust. Our way of conducting ourselves must always be ethical, that is, we seek to do the right thing, even when it is difficult, unpopular or goes unnoticed. Being of integrity helps us to develop a better environment, in which mistakes are recognized and their consequences are corrected, showing coherence between what is said, what is decided and what is acted upon. We encourage Empresas Copec to be an organization of integrity and reliability.

Those of us who work at Empresas Copec seek to reach our maximum potential and deliver the best of ourselves in all the tasks we perform. We adopt a standard of excellence in our decisions and actions, based on responsibility, passion and attention to detail. We want our actions to be geared toward exceeding expectations: every job we do, big or small, is an opportunity to build something extraordinary and to leave a positive footprint in everything we do.

Innovation

Constantly searching for new paths and innovations to improve people's lives

Long Term Have a long-term vision to contribute

to the solution of society's major challenges

People at the Center Focusing our attention on people's well-being and development

At Empresas Copec we promote curiosity, innovation and the courage to explore the unknown, challenge the established and transform obstacles and mistakes into possibilities for growth. We give space to try and create new paths, through a culture that encourages the search for transformative solutions that improve people's lives.

Through innovation and our constant commitment to collective well-being, at Empresas Copec we create opportunities that make a better future possible.

We want to have a positive impact on the world. We understand that a company cannot last over time if it does not act sustainably. Thus, at Empresas Copec we evaluate our success based on the legacy we are leaving to future generations. Our decisions and actions are always guided by a long-term vision, which drives us to think in decades, beyond immediate results, seeking to ensure that each action contributes to the well-being of society, today and tomorrow.

People are at the heart of our actions, guiding all our decisions and actions. We put their well-being, needs and development first, seeking to generate a positive impact on their lives, both inside and outside the organization. We respect the individuality and value of each person, prioritizing their care, progress and happiness. We act with empathy, to put ourselves in the other person's place and understand their concerns and needs. At Empresas Copec we work so that people can develop, fulfill their dreams and achieve a full life.

History

NCG 461 (2.2) ⊙

 Copec is incorporated as a company for the purpose of marketing and distributing fuels in Chile.

1935

 Copec shares begin trading on the Chilean Stock Exchange.

1956

 Abastible was created to market and distribute liquefied gas in the country.

1957

 Sonacol is born to transport liquid fuels through a network of pipelines.

 Copec assumes representation and distribution of Mobil products in Chile.

1990

1989

1986

1979

1976

 ARAUCO gives rise to Bioforest,a research center that seeks to research. develop and apply state-of-the-art technology in biotechnology and pulp laboratories, greenhouses, forestry assets and industrial plants.

 ARAUCO creates Arauco Educational Foundation to strengthen teaching in municipal schools in the Maule, Biobío and Los Ríos regions.

 The Angelini Group acquires a 41% stake in Copec.

 ARAUCO was created after the merger of the acquired companies in 1976.

 Copec acquires Celulosa Arauco and Forestal Arauco.

• Compañía Minera Can-Can (today Alxar Mineria) was incorporated to explore and develop gold, silver and copper deposits.

1994

1996

1999

2000

 Copec, together with other Chilean companies, create Metrogas, the company in charge of marketing natural gas in the country.

 ARAUCO acquires Alto Paraná (now Arauco Argentina), owner of one of the main pulp mills in Argentina.

 Corpesca was created following the integration of the operating assets that the Igemar, Eperva and Coloso fishing companies had in northern Chile.

 Copec and Pontificia Universidad Católica de Chile launch the Copec-UC Foundation with the purpose of promoting applied scientific research in the area of natural resources.

 ARAUCO and Stora Enso acquire forestry land and a sawmill in Brazil.

2006

• Copec takes the ownership in Elemental, a do tank⁽¹⁾ aimed at developing social housing projects to reduce poverty and improve people's quality of life.

2003

• In order to separate the fuel business from investment in other areas, a corporate restructuring process was carried out, which gave rise to Empresas Copec, a parent company that concentrates the participation in the subsidiaries and related companies in the forestry, energy, fishing and other sectors. Meanwhile, subsidiary Copec is in charge of the distribution and marketing of liquid fuels and lubricants.

2002

• The Angelini Group strengthens its control of Copec by indirectly acquiring an additional 30.05% of Copec's shares.

- Copec inaugurates the largest electro-terminal in Chile in Maipú and Terpel, the first electric loading terminal in Colombia.

4 A A

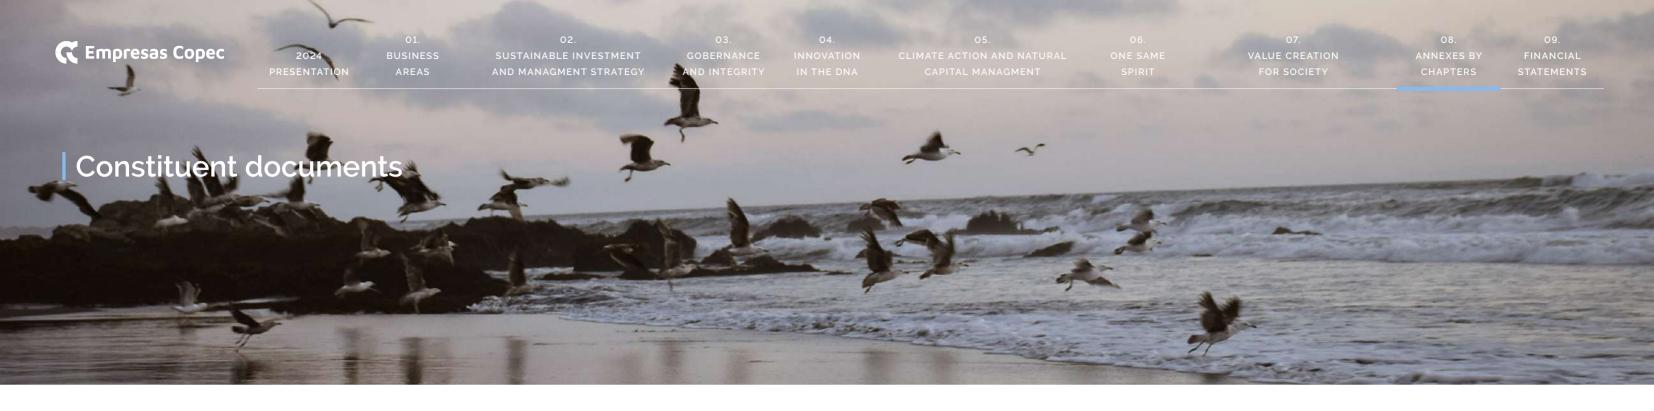

- Empresas Copec launches a new corporate purpose: to shape the world for future generations.
- ARAUCO agrees to sell forestry assets in Brazil and acquires all of E2E, a wood-based sustainable building solutions company.
- Copec sells 100% of Mapco shares in the United States to concentrate on new businesses, launches "Copec Pay" and continues to expand electromobility in Latin America with Voltex and the use of solar energy through its investments in Flux Solar and Ampere Energy.

44000

 See the 2024 milestones and awards section in the 2024 Presentation chapter.

At the Extraordinary Shareholders' Meeting held on April 24, 2024, it was agreed that the purpose of Empresas Copec will be to make investments in movable, tangible or intangible assets, shares in open, closed, special or other types of corporations, rights or shares in other companies, bonds, bills of exchange and other marketable securities, as well as in urban and rural real estate.

The Company was incorporated by public deed dated October 31, 1934, executed before the Santiago notary Mr. Luis Azócar Álvarez. Supreme Decree N° 3,610 of November 22, 1934 authorized its existence. The pertinent registrations were made on pages 1,813 N°1,008 and 1,829 N°1,009 in the Commercial Registry of Santiago for the year 1934.

The bylaws have been amended on several occasions, among which the following are worth mentioning:

- → Modification recorded in public deed dated April 20, 1982, executed before the Santiago Notary Mr. Andrés Rubio Flores, in which its text was recast after adapting it to the provisions of Law N° 18,046;
- → Modification in which its capital was increased, which is currently divided into 1,299,853,848 shares with no nominal value, of the Real Estate Registry of Santiago in 1988; in accordance

with the application of the provisions contained in the public deed executed on January 29, 1988 before Mr. Andrés Rubio Flores, an extract of which was published in the Official Gazette of February 10, 1988 and registered on page 3,268 N° 1,690 of the Commercial Registry

- → Modification recorded in a public deed dated May 7, 2003, executed before the Santiago Notary Mr. René Benavente Cash, which changed its name as of October 1, 2003 to Empresas Copec S.A., and whose relevant extract was published in the Official Gazette of May 31, 2003 and registered on page 14,697 N° 11,252 of the Commercial Registry of the Real Estate Registry of Santiago in 2003;
- → Modification recorded in a public deed dated September 12, 2008, executed before the Santiago Notary Mr. Félix Jara Cadot, which replaces the currency used to express the capital stock

in the Company's by-laws, to keep the financial accounting records and to issue the Company's financial statements, from pesos, currency of the Republic of Chile, to dollars, currency of the United States of America, effective as of January 1, 2008, all as established in the Fourth Transitory Article of the bylaws, provision that is added to the bylaws, an extract of which was published in the Official Gazette of October 10, 2008 and registered on page 46.937 N° 32,354 of the Commercial Registry of the Real Estate Registry of Santiago of 2008.

Modification recorded in public deed dated June 7, 2018, executed at the Santiago Notary of Mr. Félix Jara Cadot, by which the Company's bylaws were adapted to Law N° 18,046, on Corporations and its Regulations, as a result of the amendments to said bodies, establishing an updated and consolidated text of the same. An extract of this deed was registered on page $43,643\,\mathrm{N}^\circ$ $22,756\,\mathrm{of}$ the Commercial Registry of the Real Estate

Registry of Santiago in 2018, and published in the Official Gazette of June 18 of the same year.

Finally, at an Extraordinary Shareholders' Meeting held on April 24, 2024, the minutes of which were reduced to public deed on June 13 of the same year at the Santiago Notary Mr. Cosme Fernando Gomila Gatica, the corporate purpose of the bylaws was adapted to the effective line of business currently carried out by the Company, i.e., investments, among other formal modifications, establishing an updated and consolidated text of the bylaws. An extract of the aforementioned deed was registered on page 46,801 N° 19,179 of the Commercial Registry of the Santiago Real Estate Registry of 2024, and published in the Official Gazette of June 13 of the same year.

Señores Empresas Copec S.A. Presente

Hemos realizado una revisión de seguridad limitada de un grupo de indicadores incluidos en la Memoria Integrada 2024 de Empresas Copec S.A. (en adelante "la Sociedad"), por el periodo comprendido entre el 01 de enero de 2024 y el 31 de diciembre de 2024. Los indicadores incorporados en la memoria han sido preparados de acuerdo con lo establecido con los Estándares del Global Reporting Initiative (en adelante "GRI"), la Norma de Carácter General Nº 461 y su modificación la Norma de Carácter General Nº 519 (en adelante "NCG"), ambas emitidas por la Comisión para el Mercado Financiero (en adelante "CMF"), el Sustainability Accounting Standards Board (en adelante "SASB") e indicadores ASG propios (en adelante "Indicadores Propios").

Nuestra responsabilidad

Nuestra responsabilidad es expresar una conclusión de seguridad limitada de los contenidos de un grupo de indicadores incluidos en la Memoria Integrada 2024 para el ejercicio finalizado en diciembre de 2024, que han sido presentados de acuerdo con el Estándar GRI, NCG, SASB e Indicadores propios en base a los procedimientos que hemos realizado y la evidencia obtenida. Hemos realizado nuestra revisión de seguridad limitada de acuerdo con la Norma Internacional sobre International Standard on Assurance Engagements Other than Audits or Reviews of Historical Financial Information (ISAE 3000), emitida por el International Auditing and Assurance Standard Board (IAASB). Esta norma requiere que planifiquemos y realicemos este trabajo para obtener una seguridad limitada respecto del grupo de indicadores incluidos en la Memoria Integrada 2024 y que estén exentos de errores materiales.

Una revisión de seguridad limitada implica la realización de procedimientos (que consisten principalmente en realizar consultas a la gerencia y a otros dentro de la entidad y aplicar procedimientos analíticos y de otro tipo, según corresponda) y evaluar la evidencia obtenida. Los procedimientos también incluyen la evaluación de la consistencia de los indicadores incluidos en la Memoria Integrada 2024 para el ejercicio finalizado en diciembre de 2024 de acuerdo con el Estándar GRI, NCG, SASB e Indicadores propios.

Debitte[®] se refere a Debitte Touche Tohmstru Limited une compositia phikada limitade por garantia, de Reino Unido, y a su red de firmas miembro, cada una de las cuales es un erididad legis apparada a independiente. Por favor, vea en vexen debitte com/ci/acercada la descripción detallada de la estructura legal de Debitta Touche Tohmstru Limited y su firmas miembro.

Deloitte Touche Tohmstru Limited es una compaña privada limitada por garantia constituída en Inglatiera & Calles bajo el número (1727/1800, y su domicilio registrado: Hill Housi 1 Little New Street, London: ECAA 3TR, Reino Linido. Abril 10, 2025 Sres. Empresas Copec S.A. Página 2

Nuestra revisión incluyó los siguientes procedimientos:

- Reuniones con el equipo que lideró el proceso de elaboración de la Memoria Integrada 2024.
- Revisión de evidencias para los indicadores detallados en esta carta, con las áreas participantes de la elaboración de la Memoria Integrada 2024.
- Manálisis de la trazabilidad de los contenidos de los indicadores sometidos a verificación e incluidos en la Memoria Integrada 2024, de acuerdo con los requerimientos establecidos en el Estándares GRI, NCG, SASB e Indicadores Propios.
- Revisión de la información incluida en la Memoria Integrada 2024 a partir de la documentación de respaldo proporcionada por la Administración. Sin embargo, nuestros procedimientos no incluyeron el testeo de los datos en los que se basan las estimaciones o en desarrollar por separado nuestras propias estimaciones con las cuales evaluar las de la Sociedad.

Los procedimientos realizados en un encargo de seguridad limitada varían en naturaleza y oportunidad y son menos extensos que para un encargo de seguridad razonable. En consecuencia, el nivel de seguridad obtenido en un encargo de seguridad limitada es sustancialmente menor que la seguridad que se habría obtenido si hubiéramos realizado un encargo de aseguramiento razonable.

Nuestra Independencia y controles de calidad

Hemos cumplido con las normas pertinentes de conducta profesional y el código de ética aplicables a la práctica contable y aquellas relacionadas con las revisiones de seguridad limitada, emitidos por diversos organismos profesionales de contabilidad, que se basan en los principios fundamentales de integridad, objetividad, competencia profesional y debido cuidado, confidencialidad y comportamiento profesional.

La firma aplica la Norma Internacional de Control de Calidad 1, Control de Calidad para Firmas que Realizan Auditorías y Revisiones de Estados Financieros, y Otras Revisiones de Seguridad y Servicios Relacionados, y en consecuencia mantiene un sistema integral de control de calidad que incluye políticas y procedimientos documentados con respecto al cumplimiento de los requisitos éticos, las normas profesionales, los requisitos legales y reglamentarios aplicables.

Conclusiones

El proceso de verificación se realizó en base a los indicadores definidos por la Administración según el siguiente detalle:

Indicadores Gobal Reporting Intiative (GRI):

2-1	2-2	2-3	2-5	2-6	2-12	2-13

Otras responsabilidades

- La preparación de la Memoria Integrada 2024, así como el contenido de esta, es responsabilidad de la Sociedad, que además es responsable de definir, adaptar y mantener los sistemas de gestión y control interno de los que se obtiene la información.
- Nuestra responsabilidad es emitir una carta de verificación independiente, basada en los procedimientos aplicados en nuestra revisión.
- Este informe ha sido preparado exclusivamente en interés de la Sociedad, de acuerdo con los términos establecidos en las condiciones comerciales de la propuesta de servicios.
- Hemos realizado nuestro trabajo de acuerdo con las normas de independencia requeridas por el Código de Ética de la IFAC.
- Las conclusiones de la revisión son válidas para la última versión de la Memoria Integrada 2024, recibida el 10 de abril de 2025.

Saluda atentamente a Ustedes,

Daniel Solórzano C. Socio

La Administración es responsable por la preparación y presentación razonable de los estados financieros consolidados de acuerdo con Normas Internacionales de Información Financiera emitidas por el International Accounting Standards Board. Esta responsabilidad incluye el diseño, implementación y mantención de un control interno pertinente para la preparación y presentación razonable de estados financieros consolidados que estén exentos de representaciones incorrectas significativas, ya sea debido

Al preparar y presentar los estados financieros consolidados, se requiere que la Administración evalúe An preparar y presentar los estacutos inflancieros consolidados, se requiere que la Administración evante se existen hechos o circunstancias que, considerados como un todo, originen una duda sustancial acerca de la capacidad de Empresas Copec S.A. y subsidiarias para continuar como una empresa en marcha por al menos doce meses a partir del final del período que se reporta, sin limitarse a dicho período.

Responsabilidades del auditor por la auditoría de los estados financieros consolidados

Nuestros objetivos son obtener una seguridad razonable de que los estados financieros consolidados como un todo, están exentos de representaciones incorrectas significativas debido a fraude o error y emitir un informe del auditor que incluya nuestra opinión. Una seguridad razonable es un alto, pero no absoluto, nivel de seguridad y, por lo tanto, no garantiza que una auditoría realizada de acuerdo con Normas de Auditoría Generalmente Aceptadas en Chile siempre detectará una representación incorrecta significativa cuando exista. El riesgo de no detectar una representación incorrecta significativa debido a fraude es mayor que el riesgo de no detectar una representación incorrecta significativa debido a un nature es mayor que el resgo ue no terectar uma representación incorrecta significanta debudo a un error, ya que el fraude puede involucrar colusión, falsificación, omisiones intencionales, ocultamiento, representaciones inadecuadas o hacer caso omiso de los controles por parte de la Administración. Una representación incorrecta se considera significativa si, individualmente, o de manera agregada, podrá influir el juicio que un usuario razonable realiza en base a estos estados financieros consolidados.

Como parte de una auditoría realizada de acuerdo con Normas de Auditoría Generalmente Aceptadas

- Ejercemos nuestro juicio profesional y mantenemos nuestro escepticismo profesional durante toda
- Identificamos y evaluamos los riesgos de representaciones incorrectas significativas de los estados financieros consolidados, ya sea debido a fraude o error, diseñamos y realizamos procedimientos de auditoría en respuesta a tales riesgos. Tales procedimientos incluyen el examen, en base a pruebas, de evidencia con respecto a los montos y revelaciones en los estados financieros consolidados.
- Obtenemos un entendimiento del control interno pertinente para una auditoría con el objeto de diseñar procedimientos de auditoría que sean apropiados en las circunstancias, pero sin el propósito de expresar una opinión sobre la efectividad del control interno de Empresas Copec S.A. y subsidiarias. En consecuencia, no expresamos tal tipo de opinión.

Santiago, 27 de febrero de 2025 Empresas Copec S.A.

- Evaluamos lo apropiado que son las políticas de contabilidad utilizadas y la razonabilidad de las estimaciones contables significativas efectuadas por la Administración y evaluamos lo apropiado de la presentación general de los estados financieros consolidados.
- Concluimos si a nuestro juicio existen hechos o circunstancias que, considerados como un todo, originen una duda sustancial acerca de la capacidad de Empresas Copec S.A. y subsidiarias para uar como una empresa en marcha por un período de tiempo razo

Se nos requiere comunicar a los responsables del Gobierno Corporativo, entre otros asuntos, la oportunidad y el alcance planificados y los hallazgos significativos de la auditoría, incluyendo cualquier deficiencia significativa y debilidad importante del control interno que identifiquemos durante nuestra
